200002 - AL - Linear Algebra

Coordinating unit: 200 - FME - School of Mathematics and Statistics
Teaching unit: 749 - MAT - Department of Mathematics
Academic year: 2017
Degree: BACHELOR'S DEGREE IN MATHEMATICS (Syllabus 2009). (Teaching unit Compulsory)
ECTS credits: 7,5
Teaching languages: Catalan

Teaching staff

Coordinator: BERNAT PLANS BERENGUER
Others:
Primer quadrimestre:
JOSEP ALVAREZ MONTANER - A, B
GUILLEM BLANCO FERNÁNDEZ - A, B
JAUME MARTI FARRE - A, B
FRANCESC D’ASSIS PLANAS VILANOVA - A, B
BERNAT PLANS BERENGUER - A, B

Segon quadrimestre:
JAUME MARTI FARRE - REF
BERNAT PLANS BERENGUER - REF

Degree competences to which the subject contributes

Specific:
1. CE-2. Solve problems in Mathematics, through basic calculation skills, taking in account tools availability and the constraints of time and resources.
2. CE-3. Have the knowledge of specific programming languages and software.
3. CE-4. Have the ability to use computational tools as an aid to mathematical processes.

Generical:
4. CB-1. Demonstrate knowledge and understanding in Mathematics that is founded upon and extends that typically associated with Bachelor's level, and that provides a basis for originality in developing and applying ideas, often within a research context.
5. CB-2. Know how to apply their mathematical knowledge and understanding, and problem solving abilities in new or unfamiliar environments within broader or multidisciplinary contexts related to Mathematics.
6. CB-3. Have the ability to integrate knowledge and handle complexity, and formulate judgements with incomplete or limited information, but that include reflecting on social and ethical responsibilities linked to the application of their knowledge and judgements.
7. CG-1. Show knowledge and proficiency in the use of mathematical language.
8. CG-2. Construct rigorous proofs of some classical theorems in a variety of fields of Mathematics.
9. CG-3. Have the ability to define new mathematical objects in terms of others already know and ability to use these objects in different contexts.
10. CG-4. Translate into mathematical terms problems stated in non-mathematical language, and take advantage of this translation to solve them.
12. CG-6 Detect deficiencies in their own knowledge and pass them through critical reflection and choice of the best
action to extend this knowledge.

Transversal:
11. SELF-DIRECTED LEARNING. Detecting gaps in one's knowledge and overcoming them through critical self-appraisal. Choosing the best path for broadening one's knowledge.

The subject is assessed by means of the continuous assessment and a final exam. The continuous assessment mark will be obtained from a not eliminatory midterm exam, similar to the final exam, and from qualifying some other activities carried out during the term.

The final mark of the subject will be worked out according to the formula:

\[
\text{Final Mark}=\max\{\text{final exam mark};\ 70\% \text{ final exam mark} + 25\% \text{ midterm exam mark} + 5\% \text{ other activities}\}
\]

An extra exam will take place on July for students that failed during the regular semester.

### Qualification system

The subject is assessed by means of the continuous assessment and a final exam. The continuous assessment mark will be obtained from a not eliminatory midterm exam, similar to the final exam, and from qualifying some other activities carried out during the term.

The final mark of the subject will be worked out according to the formula:

\[
\text{Final Mark}=\max\{\text{final exam mark};\ 70\% \text{ final exam mark} + 25\% \text{ midterm exam mark} + 5\% \text{ other activities}\}
\]

An extra exam will take place on July for students that failed during the regular semester.
