200614 - MCI - Computational Intensive Methods

Coordinating unit: 200 - FME - School of Mathematics and Statistics
Teaching unit: 715 - EIO - Department of Statistics and Operations Research
1004 - UB - (ENG)Universitat de Barcelona

Academic year: 2017
Degree: MASTER'S DEGREE IN STATISTICS AND OPERATIONS RESEARCH (Syllabus 2013). (Teaching unit Optional)
ECTS credits: 5
Teaching languages: Spanish

Teaching staff

Coordinator: PEDRO FRANCISCO DELICADO USEROS
Others: Segon quadrimestre:
PEDRO FRANCISCO DELICADO USEROS - A
FERRAN REVERTER COMES - A
ESTEBAN VEGAS LOZANO - A

Prior skills

Familiarity with the foundations of calculus in one and more variables. Intermediate studies in probability and inference. Skills using the R environment for statistical computing and programming. Any good online R course may help, like http://www.ub.edu/stat/docencia/EADB/Curso%20basico%20de%20R.htm.

Requirements

"Fundamentos de Inferencia Estadística" o "Inferencia Estadística Avanzada"
"Comunicación en Estadística y en Optimización"

Degree competences to which the subject contributes

Specific:
MESIO-CE2. CE-2. Ability to master the proper terminology in a field that is necessary to apply statistical or operations research models and methods to solve real problems.
MESIO-CE3. CE-3. Ability to formulate, analyze and validate models applicable to practical problems. Ability to select the method and / or statistical or operations research technique more appropriate to apply this model to the situation or problem.
MESIO-CE6. CE-6. Ability to use appropriate software to perform the necessary calculations in solving a problem.
MESIO-CE8. CE-8. Ability to discuss the validity, scope and relevance of these solutions and be able to present and defend their conclusions.
MESIO-CE4. CE-4. Ability to use different inference procedures to answer questions, identifying the properties of different estimation methods and their advantages and disadvantages, tailored to a specific situation and a specific context.

Transversal:
CT1a. ENTREPRENEURSHIP AND INNOVATION: Being aware of and understanding how companies are organised and the principles that govern their activity, and being able to understand employment regulations and the relationships between planning, industrial and commercial strategies, quality and profit.
CT3. TEAMWORK: Being able to work in an interdisciplinary team, whether as a member or as a leader, with the aim
Learning objectives of the subject

To know the structure of supervised and unsupervised learning problems.
To be able to fit a multiple linear regression model, and also a glm, using penalized version of the standard ordinary least squares (OLS) and maximum likelihood estimators.
To know the essential common characteristics of non-parametric regression estimators (bias-variance trade-off, smoothing parameter choice, effective number of parameters, etc.) and the details of three of them: local polynomial regression, spline smoothing, generalized additive models (GAM).
To know the principal Tree-based Methods and be able to apply these methods in real data sets.
To understand the essentials of Support Vector Machines, and to acquire the necessary abilities for applying these methods in diverse situations with a practical interest.
To understand the fundamentals of the of Artificial Neural Networks, and to acquire the necessary abilities to apply them
To know the principal cross-validation procedures for assessing model accuracy.

</table>
# Artificial Neural Networks

**Description:**
1. Feed-Forward Network Functions.
2. Network Training.
3. Error Backpropagation.

**Learning time:** 9h  
Theory classes: 9h

---

# Support Vector Machine

**Description:**
1. Maximum Margin Classifier.

**Learning time:** 6h  
Theory classes: 6h

---

# Qualification system

It is based on two parts:
1) Practical exercises done through the course: 50%  
2) Final exam: 50%
