220047 - Sustainable Manufacturing Technologies

Coordinating unit: 205 - ESEIAAT - Terrassa School of Industrial, Aerospace and Audiovisual Engineering
Teaching unit: 712 - EM - Department of Mechanical Engineering
Academic year: 2017
Degree: BACHELOR’S DEGREE IN AEROSPACE VEHICLE ENGINEERING (Syllabus 2010). (Teaching unit Optional)
BACHELOR’S DEGREE IN INDUSTRIAL TECHNOLOGY ENGINEERING (Syllabus 2010). (Teaching unit Optional)
BACHELOR’S DEGREE IN AEROSPACE TECHNOLOGY ENGINEERING (Syllabus 2010). (Teaching unit Optional)
ECTS credits: 3  Teaching languages: English

Teaching staff
Coordinator: Jasmina Casals
Others: José A. Ortiz, Xavier Saluèña

Prior skills
Students should have basic technical drawing capabilities and knowledge about technology materials.

Degree competences to which the subject contributes

Specific:
1. GrETA/GrEVA - An understanding of manufacturing processes
2. Applied knowledge of manufacturing systems and processes, metrology and quality control

Teaching methodology
The teaching methodology is divided in three parts:
- Theoretical contents sessions.
- Visits to metrology and mechanical lab sessions or Probleme solving sessions.
- Autonomous work and homeworks.
In the theoretical sessions the professor will present the theoretical concepts.
In the lab sessions, students will practice the knowledge acquired setting practical experiments or solving problems under the supervision of the professor.
In each module a selfstudy time is required in order to assimilate the concepts and resolve the proposed exercises.

Learning objectives of the subject
- To provide basic knowledge, theoretical, practical, sustainable manufacturing processes most commonly those areas aerospace, automotive and renewable energy, among others.
- To Introduce students to the techniques of quality control in the manufacturing sector, with considerations of design, safety and sustainability.
# Study load

<table>
<thead>
<tr>
<th>Total learning time: 75h</th>
<th>Hours large group:</th>

</thead>
<tbody>
<tr>
<td>4.1. Hot forming</td>
<td>Theory classes: 9h</td>
</tr>
<tr>
<td>4.2. Cold forming</td>
<td>Self study: 10h</td>
</tr>
<tr>
<td>4.3. Rapid Prototyping</td>
<td></td>
</tr>
<tr>
<td>4.4. Micromanufacturing</td>
<td></td>
</tr>
</tbody>
</table>

**Related activities:**
Activity 1 - Activity 2 - Activity 3 - Activity 4
### ACTIVITY 1: THEORY SESSIONS

**Description:**
Description in class of the theoretical contents of the subject

**Support materials:**
- Basic and specific bibliography
- ATENEA Handouts

**Descriptions of the assignments due and their relation to the assessment:**
This activity is graded through one written final exam (activity 4)

**Specific objectives:**
After these classes, the student should have consolidated and acquired all the knowledges enumerated in the general learning goals of subject.

**Hours:**
- Theory classes: 14h
- Self study: 8h

---

### ACTIVITY 2: PRACTICAL PROJECT SESSIONS

**Description:**
Students organized by project groups. Teachers provide general criteria contained project "Design and manufacturing of a prototype sustainable." Also, it will provide the content specific to each project group.

**Support materials:**
- Bibliography
- Project guide

**Descriptions of the assignments due and their relation to the assessment:**
Report on the activity performed in groups. Must be delivered in digital format (ATENEA) and make an oral presentation at the end of course (3-5 min. per group).

- It is part of continuous evaluation systems.

**Specific objectives:**
- Ability to find technical information autonomously.
- Ability to resolve production problems, go to a design (on paper or digital), the making a physical prototype or real.
- Understand and apply different methods to raise production.
- The student aware of the concept of standardization and the concept of 3R's (Reduce, Reuse and Recycling), designed and manufactured components.
- Development of Sustainability and Social generic competence.

**Hours:**
- Theory classes: 6h
- Self study: 16h

---

### ACTIVITY 3: LAB SESSIONS

**Description:**
In this activity the student will set up practical experiments related to the subject contents

**Hours:**
- Theory classes: 8h
- Self study: 10h
### Support materials:
Bibliography and Lab Guide

### Descriptions of the assignments due and their relation to the assessment:
Lab report prepared for groups.
It is part of continuous evaluation systems.

### Specific objectives:
Improve and use concepts related to metrology and manufacturing technologies.
Contents related to module 1, 2, 3 and 4

### ACTIVITY 4: FINAL EXAM

| Hours | Theory classes: 2h  
Self study: 7h |
|-------|------------------|

**Description:**
Individual test related to the required contents.

**Support materials:**
Exam and handouts provided

**Descriptions of the assignments due and their relation to the assessment:**
Solved exam is handed to the professor
It is part of continuous evaluation systems

**Specific objectives:**
Contents related to module 1, 2, 3 and 4

### ACTIVITY 5: HOMEWORKS

<table>
<thead>
<tr>
<th>Hours</th>
<th>Self study: 4h</th>
</tr>
</thead>
</table>

**Description:**
Solve problems posted in ATENEA in order to fix the contents developed in the theoretical and practical sessions

**Support materials:**
Problem posted in ATENEA

**Descriptions of the assignments due and their relation to the assessment:**
Handout the solution through ATENEA

**Specific objectives:**
Contents related to module 2 and 3

### Qualification system

Activity 2 (Project sessions), weight: 25%
Activity 3 (Lab sessions), weight: 20%
Activity 4 (Final exam), weight: 45%
Activity 5 (Homeworks), weight: 10%
Regulations for carrying out activities

All the activities are compulsory. Activities 2 and 3 are held in groups and writing. The third activity will also have a 3-5 minute oral presentation. Activities 4 and 5 will be individually written.
