## Teaching staff

**Coordinator:** Jorge Mata Diaz  
**Others:** Juan José Alins Delgado

## Prior skills

- Basic understanding of IP protocols  
- TCP and UDP Socket Programming  
- Fundamentals of source coding, channel coding and cryptography  
- Fundamentals of digitization and quantification of sound and image

## Requirements

- Data Transmission - Prerequisite  
- Audiovisual Signal Processing and Communications - Prerequisite  
- Applications and Telematic Services - Prerequisite

## Degree competences to which the subject contributes

**Generical:**

1. They will have acquired knowledge related to experiments and laboratory instruments and will be competent in a laboratory environment in the ICC field. They will know how to use the instruments and tools of telecommunications and electronic engineering and how to interpret manuals and specifications. They will be able to evaluate the errors and limitations associated with simulation measures and results.
The objective of this course is to train students in aspects of multimedia communications used by audiovisual services and applications. Starting from basics of capture and storage of audiovisual information, the student will acquire the skills needed to locate, request and transport multimedia information over IP networks. Related to the multimedia services to deploy the necessary metrics will be established in order to determine a level of quality experienced by the user.

The expected student learning outcomes are:

a) Have ability to build, operate and manage services and telecom applications, particularly those related multimedia audiovisual services and applications, including acquisition systems, analog and digital processing, coding, transport, representation, processing, storage, reproduction, management and presentation of these services and applications.
b) Has ability to create, encode, manage, disseminate, distribute, multimedia content, based on criteria of usability and accessibility of audiovisual, broadcast and interactivity.
c) Planning and use the necessary information for a project or academic work.
d) Design experiments and steps to verify hypotheses or to validate the operation of equipment, process, systems or services in the ICT field. Select equipment and performs advanced data analysis with software tools.

**Description:**
Description multiservice architectures: Triple Play. Video delivery services. Voice services over IP. Videoconferencing. P2P streaming services.

**Qualification system**

Evaluation:
Attendance: 15%
Individual and group: 10%
Quizzes: 40%
Practice tests: 35%

This course will assess generic skills:
- Knowledge of instrumentation and experimental (High Level)

**Bibliography**

**Basic:**

**Complementary:**
