230358 - BMAC - Basic Mathematics for Algebraic Coding Theory with Applications to Cryptography

Coordinating unit: 230 - ETSETB - Barcelona School of Telecommunications Engineering
Teaching unit: 749 - MAT - Department of Mathematics
Academic year: 2017
Degree: MASTER'S DEGREE IN TELECOMMUNICATIONS ENGINEERING (Syllabus 2013). (Teaching unit Optional)
       DEGREE IN TELECOMMUNICATIONS ENGINEERING (Syllabus 1992). (Teaching unit Optional)
ECTS credits: 2,5  Teaching languages: English

Teaching staff

Coordinator: Jorge Jimenez
Others: Marcel Fernandez
         Jorge Jimenez

Degree competences to which the subject contributes

Specific:
CE1. Ability to apply information theory methods, adaptive modulation and channel coding, as well as advanced techniques of digital signal processing to communication and audiovisual systems.
CE4. Ability to design and dimension transport, broadcast and distribution networks for multimedia signals
CE8. Ability to understand and to know how to apply the functioning and organization of the Internet, new generation Internet technologies and protocols, component models, middleware and services
CE9. Ability to deal with the convergence, interoperability and design of heterogeneous networks with local, access and core networks, as well as with service integration (telephony, data, television and interactive services).
CE15. Ability to integrate Telecommunication Engineering technologies and systems, as a generalist, and in broader and multidisciplinary contexts, such as bioengineering, photovoltaic conversion, nanotechnology and telemedicine.

Transversal:
CT1a. ENTREPRENEURSHIP AND INNOVATION: Being aware of and understanding how companies are organised and the principles that govern their activity, and being able to understand employment regulations and the relationships between planning, industrial and commercial strategies, quality and profit.
CT2. SUSTAINABILITY AND SOCIAL COMMITMENT: Being aware of and understanding the complexity of the economic and social phenomena typical of a welfare society, and being able to relate social welfare to globalisation and sustainability and to use technique, technology, economics and sustainability in a balanced and compatible manner.
CT3. TEAMWORK: Being able to work in an interdisciplinary team, whether as a member or as a leader, with the aim of contributing to projects pragmatically and responsibly and making commitments in view of the resources that are available.
CT4. EFFECTIVE USE OF INFORMATION RESOURCES: Managing the acquisition, structuring, analysis and display of data and information in the chosen area of specialisation and critically assessing the results obtained.
CT5. FOREIGN LANGUAGE: Achieving a level of spoken and written proficiency in a foreign language, preferably English, that meets the needs of the profession and the labour market.
Learning objectives of the subject:
The aim of this course is to train the students in the knowledge of the actual mathematics used in coding theory and cryptography. They will learn the most modern applications and will be able to follow new research in engineering security and coding theory.

Learning results of the subject:
- Ability to understand mathematics on finite fields, algebraic curves and basic factorization algorithms as Berlekamp.
- Ability to understand the new algorithms for coding and cryptography
- Ability to analyse current developments in geometric coding theory and its applications to information security
- Ability to analyse, model and apply advanced techniques both security, including cryptographic protocols, as identifying traitors.

</tr>
</tbody>
</table>

### 1. Finite fields

**Description:**
- Properties
- Existence and uniqueness
- Extensions
- Ring of polynomials over finite fields
- Ring of polynomials over finite fields

### 2. Algebraic curves over finite fields

**Description:**
- Basic properties: smooth and singular curves
- Zeta functions and curves with many rational points, Hasse-Weil Theorem
- Function fields
- Riemann Roch
- Examples

### 3. Polynomial Arithmetic

**Description:**
- Basic arithmetic
- Resultant and discriminants
- Basic Factorization algorithms
# 4. Error Correcting Codes

**Description:**
- Basics of error correction.
- Polynomial codes. Reed Solomon codes.
- Classical decoding. Berlekamp-Massey Algorithm

| Learning time: | Theory classes: 2h  
Practical classes: 1h  
Self study: 8h |
|----------------|--------------------------------------------------------|

# 5. List Decoding

**Description:**
- List decoding vs Minimum distance decoding
- Guruswami-Sudan algorithm
- Koetter-Vardy algorithm

| Learning time: | Theory classes: 3h  
Practical classes: 1h  
Self study: 8h |
|----------------|--------------------------------------------------------|

# 6. Applications of List Decoding

**Description:**
- Traceability codes
- Tracing algorithms

| Learning time: | Theory classes: 2h 30m  
Self study: 2h |
|----------------|--------------------------------------------------------|

## Qualification system

<table>
<thead>
<tr>
<th>Exams</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Exercises</td>
<td>50%</td>
</tr>
<tr>
<td>Oral presentation</td>
<td>50%</td>
</tr>
</tbody>
</table>

**Exercises:**
- Description: Exercises to strengthen the theoretical knowledge.

**Oral presentation:**
- Description: Presentation of a work group.
