

230563 - NLO - Non-Linear Optics

Coordinating unit: 230 - ETSETB - Barcelona School of Telecommunications Engineering
Teaching unit: 748 - FIS - Department of Physics
Academic year: 2017
Degree: MASTER'S DEGREE IN PHOTONICS (Syllabus 2013). (Teaching unit Optional)
ECTS credits: 3 Teaching languages: English

Teaching staff

Coordinator: Crina Cojocaru, UPC (coord).
Others: Jose Trull, UPC.

Opening hours

Timetable:

Degree competences to which the subject contributes

Basic:

CB6. (ENG) Poseer y comprender conocimientos que aporten una base u oportunidad de ser originales en el desarrollo y/o aplicación de ideas, a menudo en un contexto de investigación

CB7. (ENG) Que los estudiantes sepan aplicar los conocimientos adquiridos y su capacidad de resolución de problemas en entornos nuevos o poco conocidos dentro de contextos más amplios (o multidisciplinares) relacionados con su área de estudio.

CB10. (ENG) Que los estudiantes posean las habilidades de aprendizaje que les permitan continuar estudiando de un modo que habrá de ser en gran medida autodirigido o autónomo.

CB8. (ENG) Que los estudiantes sean capaces de integrar conocimientos y enfrentarse a la complejidad de formular juicios a partir de una información que, siendo incompleta o limitada, incluya reflexiones sobre las responsabilidades sociales y éticas vinculadas a la aplicación de sus conocimientos y juicio.

Specific:

CE2. (ENG) Màster en Fotònica:

Demostrar que comprende las peculiaridades que comporta el modelo cuántico para la interacción luz-materia.

CE9. (ENG) Màster en Fotònica:

Capacidad para sintetizar y exponer los resultados de investigación en fòtonica según los procedimientos y convenciones de las presentaciones científicas en inglés.

CE4. (ENG) Màster en Fotònica:

Demostrar que conoce los fundamentos de la formación de imagen, de la propagación de la luz a través de los diferentes medios y de la Óptica de Fourier.

Generical:

CG1. (ENG) Màster en Fotònica:

Capacidad para proyectar, diseñar e implantar productos, procesos, servicios e instalaciones en algunos ámbitos de la fòtonica como los relacionados con la ingeniería fòtonica, la nanofotónica, la óptica cuántica, las telecomunicaciones y la biofotónica

Transversal:

1. EFFECTIVE USE OF INFORMATION RESOURCES: Managing the acquisition, structuring, analysis and display of data and information in the chosen area of specialisation and critically assessing the results obtained.

2. ENTREPRENEURSHIP AND INNOVATION: Being aware of and understanding how companies are organised and the principles that govern their activity, and being able to understand employment regulations and the relationships between planning, industrial and commercial strategies, quality and profit.

230563 - NLO - Non-Linear Optics

3. FOREIGN LANGUAGE: Achieving a level of spoken and written proficiency in a foreign language, preferably English, that meets the needs of the profession and the labour market.

4. TEAMWORK: Being able to work in an interdisciplinary team, whether as a member or as a leader, with the aim of contributing to projects pragmatically and responsibly and making commitments in view of the resources that are available.

Teaching methodology

- Lectures

Learning objectives of the subject

This course will render an overview on the basic principles of second and third order nonlinear effects in optics and their most important applications, providing a sound background in this field. Starting from the basic equations governing different nonlinear processes, detailed solutions and approximations will be discussed. We will then extend to more complex systems, interactions and applications of nonlinear effects. The last part of the course aims to provide an overview in recent advances and state of the art of the field.

Study load

| | | | |
|--------------------------|---------------------|---------|--------|
| Total learning time: 75h | Hours large group: | 22h 30m | 30.00% |
| | Hours medium group: | 0h | 0.00% |
| | Hours small group: | 0h | 0.00% |
| | Guided activities: | 2h 15m | 3.00% |
| | Self study: | 50h 15m | 67.00% |

Content

| | |
|---|---|
| <p>1. Maxwell equations and polarization</p> | <p>Learning time: 2h 48m Theory classes: 2h 48m</p> |
| <p>Description:</p> <ul style="list-style-type: none"> 1.1 Maxwell equations 1.2 Polarization and susceptibility: Lorentz model for bounded charges, index of refraction, hydrodynamic model for free electrons. | |
| <p>2. Optics of Crystals</p> | <p>Learning time: 2h 48m Theory classes: 2h 48m</p> |
| <p>Description:</p> <ul style="list-style-type: none"> 2.1 Maxwell equations and material relations in birefringent crystals 2.2 Normal modes of propagation in crystals 2.3 Propagation of ordinary and extraordinary waves in crystals | |
| <p>3. Nonlinear polarization</p> | <p>Learning time: 2h 48m Theory classes: 2h 48m</p> |
| <p>Description:</p> <ul style="list-style-type: none"> 3.1 Nonlinear polarization 3.2 Classical derivation of nonlinear susceptibility: second and third order interactions 3.3 Nonlinear susceptibility symmetries 3.4 Effective nonlinear coefficient | |
| <p>4. Nonlinear wave equations</p> | <p>Learning time: 2h 48m Theory classes: 2h 48m</p> |
| <p>Description:</p> <ul style="list-style-type: none"> 4.1 Wave equations for nonlinear optics 4.2 Coupled mode theory for plane waves: quasi-monochromatic plane wave approximation, separation on frequencies approximation, slowly-varying amplitude approximation 4.3 Energy and phase relations in nonlinear optics | |

230563 - NLO - Non-Linear Optics

| | |
|--|---|
| <p>5. Second order nonlinear effects (plane wave approximation)</p> | <p>Learning time: 2h 48m Theory classes: 2h 48m</p> |
| <p>Description:</p> <ul style="list-style-type: none"> 5.1 General description of the second order processes 5.2 Coupled-wave equations for sum-frequency generation: coupled-amplitude equations, solution for non-depleted input waves, phase-matching considerations, Manly-Rowe relations, the case of one depleted input beam. 5.3. Second harmonic generation: phase matching techniques, different materials for SHG, applications 5.4 Difference-frequency generation and parametric amplification (OPA); 5.5 Optical parametric oscillations (OPO) | |
| <p>6 Third order nonlinear effects (plane wave approximation)</p> | <p>Learning time: 2h 48m Theory classes: 2h 48m</p> |
| <p>Description:</p> <ul style="list-style-type: none"> 6.1 Third harmonic generation and optical Kerr effect 6.2 Self and cross-phase modulation 6.3 Four-wave mixing: coupled wave theory for three wave mixing and third harmonic generation 6.4 Optical phase conjugation | |
| <p>7. Nonlinear optics with beams and pulses</p> | <p>Learning time: 1h 12m Theory classes: 1h 12m</p> |
| <p>Description:</p> <ul style="list-style-type: none"> 7.1 Basic equations for beams and pulses 7.2 Nonlinear interactions in Kerr media: self-phase modulation, self-focusing, filamentation and optical solitons 7.3 Parametric processes in quadratic media 7.4 Short pulse characterization | |

230563 - NLO - Non-Linear Optics

| | |
|---|---|
| 8. Nonlinear light scattering and absorption | Learning time: 4h 30m Theory classes: 4h 30m |
| <p>Description:</p> <ul style="list-style-type: none"> 8.1 Light scattering 8.2 Brillouin scattering 8.3 Raman scattering 8.4 Two-photon absorption | |

Planning of activities

| | |
|----------|---|
| Activity | Hours: 2h 18m Theory classes: 2h 18m |
| | |

Qualification system

- Written exam (60%) (exam week)
- Homework: exercises and problem collection (30%) (to be delivered with the exam)
- Class and seminars attendance (10%)
