

230657 - CTA - Control Theory and Applications

Coordinating unit:	230 - ETSETB - Barcelona School of Telecommunications Engineering
Teaching unit:	710 - EEL - Department of Electronic Engineering
Academic year:	2017
Degree:	MASTER'S DEGREE IN TELECOMMUNICATIONS ENGINEERING (Syllabus 2013). (Teaching unit Optional) MASTER'S DEGREE IN ELECTRONIC ENGINEERING (Syllabus 2013). (Teaching unit Optional)
ECTS credits:	5
Teaching languages:	English

Teaching staff

Coordinator:	DOMINGO BIEL, FRANCESC GUINJOAN
Others:	ALBERTO POVEDA, EDUARD ALARCÓN

Degree competences to which the subject contributes

Transversal:

1. EFFECTIVE USE OF INFORMATION RESOURCES: Managing the acquisition, structuring, analysis and display of data and information in the chosen area of specialisation and critically assessing the results obtained.
2. FOREIGN LANGUAGE: Achieving a level of spoken and written proficiency in a foreign language, preferably English, that meets the needs of the profession and the labour market.

Teaching methodology

- Lectures
- Laboratory classes
- Exercises
- Other activities
- Extended answer test (Final Exam)

Learning objectives of the subject

Learning objectives of the subject:

The aim of this course is to introduce the students in time-domain and frequency-domain methods used to analyse and design linear control systems in both continuous and discrete-time fields.

Learning results of the subject:

- Ability to understand the basic concepts related to feedback system in both continuous-time and discrete-time fields.
- Ability to apply the root locus technique and the Routh stability criteria for the analysis of control systems.
- Ability to design the proper controllers to verify some control specifications in both time-domain and frequency domain.

230657 - CTA - Control Theory and Applications

Study load

Total learning time: 125h	Hours large group:	39h	31.20%
	Hours medium group:	0h	0.00%
	Hours small group:	0h	0.00%
	Guided activities:	0h	0.00%
	Self study:	86h	68.80%

230657 - CTA - Control Theory and Applications

Content

<p>1. Introduction to linear control systems</p>	<p>Learning time: 10h Theory classes: 2h Self study : 8h</p>
<p>Description:</p> <ul style="list-style-type: none"> - Basic components of a control system, reference, control, output and disturbance signals. - Control system goals. - Continuous-time control and discrete-time control. - Dynamic systems classification: linear and nonlinear systems, time-varying and time-invariant systems. - Transfer function of linear systems. 	
<p>2. Continuous-time control systems analysis</p>	<p>Learning time: 24h Theory classes: 6h Self study : 18h</p>
<p>Description:</p> <ul style="list-style-type: none"> - Transient and steady-state time-response of linear systems. - First and second-order systems. - Transient response characterization: settling time, maximum overshoot, etc. - Higher order systems: transient response approximation through dominant poles and zero-pole cancellation. - Routh-Hurwitz stability criteria. - Root locus analysis. - Steady-state error. 	
<p>3. Continuous-time control systems design</p>	<p>Learning time: 28h Theory classes: 6h Laboratory classes: 6h Self study : 16h</p>
<p>Description:</p> <ul style="list-style-type: none"> - Control design through root locus. - First and second-order controllers. - PID controllers. - Implementation issues of PID controllers. 	

230657 - CTA - Control Theory and Applications

<p>4. Analysis of control systems in frequency domain</p>	<p>Learning time: 9h Theory classes: 3h Self study : 6h</p>
<p>Description:</p> <ul style="list-style-type: none"> - Frequency response of linear systems. - Nyquist diagram and Bode diagram. - Relative stability: gain margin and phase margin. 	
<p>5. Frequency-domain control design</p>	<p>Learning time: 24h Theory classes: 5h Laboratory classes: 2h Self study : 17h</p>
<p>Description:</p> <ul style="list-style-type: none"> - Frequency-domain specifications: relative stability margins and bandwidth of a control system. - Lead-lag and phase-lag compensations. 	
<p>6. Discrete-time control systems</p>	<p>Learning time: 30h Theory classes: 4h Laboratory classes: 5h Self study : 21h</p>
<p>Description:</p> <ul style="list-style-type: none"> - Introduction to discrete-time control systems. - The Z transform. - Z Plane analysis of discrete-time systems. - Design of discrete-time control systems by conventional methods. 	

230657 - CTA - Control Theory and Applications

Planning of activities

LECTURES

EXERCISES

Description:
Exercises to strengthen the theoretical knowledge.

OTHER ACTIVITIES

Description:
Numerical simulation homework

EXTENDED ANSWER TEST (FINAL EXAM)

Description:
Final examination.

Qualification system

Mid course exam (50%)

Final exam (50%)
