

230678 - MOSIC - Mosaic. Modelling, Simulation and Control of Power Electronic Systems

Coordinating unit: 230 - ETSETB - Barcelona School of Telecommunications Engineering
Teaching unit: 710 - EEL - Department of Electronic Engineering
Academic year: 2017
Degree: DEGREE IN ELECTRONIC ENGINEERING (Syllabus 1992). (Teaching unit Optional)
MASTER'S DEGREE IN ELECTRONIC ENGINEERING (Syllabus 2009). (Teaching unit Optional)
MASTER'S DEGREE IN ELECTRONIC ENGINEERING (Syllabus 2013). (Teaching unit Optional)
ECTS credits: 5 Teaching languages: English

Teaching staff

Coordinator: MIGUEL CASTILLA FERNÁNDEZ
Others: MIGUEL CASTILLA FERNÁNDEZ
JOSÉ LUIS GARCIA DE VICUÑA MUÑOZ DE LA NAVA

Prior skills

Circuit analysis, Analog electronics, Digital Electronics, Power Electronics, Linear control analysis

Degree competences to which the subject contributes

Transversal:

1. TEAMWORK: Being able to work in an interdisciplinary team, whether as a member or as a leader, with the aim of contributing to projects pragmatically and responsibly and making commitments in view of the resources that are available.
2. EFFECTIVE USE OF INFORMATION RESOURCES: Managing the acquisition, structuring, analysis and display of data and information in the chosen area of specialisation and critically assessing the results obtained.
3. FOREIGN LANGUAGE: Achieving a level of spoken and written proficiency in a foreign language, preferably English, that meets the needs of the profession and the labour market.

Teaching methodology

The course includes theory classes, which are oriented to introduce the initial knowledge, and exercises and laboratory classes, which are oriented to the application of the basic knowledge. The self study is guided by exercises and problems.

Learning objectives of the subject

Learning objectives of the subject:

The aim of this course is to train students in methods of design, dimensioning and evaluation of power electronic systems.

Learning results of the subject:

- Ability to develop models and design nonlinear control schemes of power electronic systems.
- Ability to analyze and design power electronic systems in single-phase and three-phase applications.
- Ability to evaluate the performance of power electronic systems by simulation tools.
- Ability to program digital signal processors (DSP) for control purposes.
- Ability to develop techniques for the design, analysis and evaluation of electronic systems in applications such as automation, aerospace, energy distribution and generation, consumer electronics, biomedicine, etc.
- Ability to synthesize and solve problems related to the electronic engineering discipline, to apply learning techniques in

230678 - MOSIC - Mosaic. Modelling, Simulation and Control of Power Electronic Systems

complex and multiple contexts, to apply previous knowledge to new situations and contexts, as well as the ability to coordinate and work in a team.

- Ability to analyze, design and evaluate electronic systems for power control and energy conversion.

Study load

Total learning time: 125h	Hours large group:	26h	20.80%
	Hours medium group:	0h	0.00%
	Hours small group:	13h	10.40%
	Guided activities:	0h	0.00%
	Self study:	86h	68.80%

Content

<p>Modeling and control of three-phase power converters</p>	<p>Learning time: 35h Theory classes: 8h Laboratory classes: 4h Guided activities: 10h Self study : 13h</p>
<p>Description:</p> <ul style="list-style-type: none"> - Space-phasor representation and frames - Modeling of three-phase power converters - Control of three-phase power converters 	
<p>Simulation of three-phase power converters</p>	<p>Learning time: 40h Theory classes: 8h Laboratory classes: 4h Guided activities: 8h Self study : 20h</p>
<p>Description:</p> <ul style="list-style-type: none"> - Unity-power-factor rectifiers - Uninterruptible power supplies - Active power filters 	
<p>Modeling, simulation and control of electrical micro-grids</p>	<p>Learning time: 50h Theory classes: 10h Laboratory classes: 5h Guided activities: 8h Self study : 27h</p>
<p>Description:</p> <ul style="list-style-type: none"> - Basic concepts of electrical micro-grids - Hierarchical control - Energy management in micro-grids 	

230678 - MOSIC - Mosaic. Modelling, Simulation and Control of Power Electronic Systems

Qualification system

The course is evaluated according to the following items:

- * Individual written exams (EXAM).
- * Individual or in group exercises (EXER).
- * Laboratory classes (LABO).
- * Achievement of general and specific skills (SKIL).

The final mark (FM) is obtained using the following equation:

$$FM=0.3*EXAM+0.3*EXER+0.25*LABO+0.15*SKIL$$
