Degree competences to which the subject contributes

Specific:
2. Basic knowledge on using and programming computers, operating systems, databases and computer programs for engineering applications.
3. Basic knowledge on using and programming computers, operating systems, databases and software with application in the field of naval engineering technology.

Transversal:
1. TEAMWORK - Level 1. Working in a team and making positive contributions once the aims and group and individual responsibilities have been defined. Reaching joint decisions on the strategy to be followed.

Learning objectives of the subject

Once completed the computer course, the student must be able to:
1. Describe a computer from the point of view of their functional and physical model.
2. Explain the functions of a computer operating system.
3. Perform computer programs using high-level languages.
4. Describe the components and functions of a local area network.
5. Manage computer applications for the use in the marine environment and design a database.

This course will evaluate the following STCW competences: Operate electrical, electronic and control systems.

## Content

### (ENG) Theme 1: Introduction to computers

**Learning time:** 12h
- Theory classes: 4h
- Self study: 8h

**Description:**
The computers, architecture and structure of the computer systems. Introduction to the operating systems.

### (ENG) Theme 2.1: Introduction to digital systems

**Learning time:** 10h
- Theory classes: 2h
- Practical classes: 2h
- Self study: 6h

**Description:**
Systems and signals, computer structures, numerical systems and binary arithmetic, coding information.

### (ENG) Theme 2.2: Logic functions and combinational systems

**Learning time:** 18h
- Theory classes: 4h
- Practical classes: 2h
- Laboratory classes: 2h
- Guided activities: 2h
- Self study: 8h

**Description:**
The logic and the Boole algebra, logic functions, functions simplification, implementation and synthesis of logic functions, combinational blocs.

### (ENG) Theme 2.3: Sequential systems

**Learning time:** 17h
- Theory classes: 3h
- Practical classes: 2h
- Laboratory classes: 2h
- Guided activities: 2h
- Self study: 8h

**Description:**
Concepts and definitions, biestables, implementation of sequential systems, registers, counters, memories.

Self study: 8h |
| (ENG) Theme 4.1: Introduction to local area networks | 16h           | Local area networks types, networks components, architecture, protocols and services in a network. |
| (ENG) Theme 4.2: The NMEA bus | 7h            | The NMEA bus as a network. Physical elements that can be communicated by the NMEA bus. The NMEA sentences. |
| (ENG) Theme 5: Marine computer applications | 10h           | Management of computer applications for the use in the marine environment. Design and use of databases. |
Evaluation

The final qualification is the sum of the following partial qualifications:

\[ N_{\text{final}} = 0.4N_{\text{pf}} + 0.3N_{\text{ac}} + 0.2N_{\text{eL}} + 0.1N_{\text{ad}} \]

where

- \( N_{\text{final}} \): final qualification.
- \( N_{\text{pf}} \): this is the qualification obtained in the final exam.
- \( N_{\text{ac}} \): this is the qualification obtained in the continuous evaluation.
- \( N_{\text{eL}} \): this is the qualification obtained in the laboratory (practice works in the informatics classroom).
- \( N_{\text{ad}} \): this is the qualification obtained in the guided activities.

The continuous evaluation (\( N_{\text{ac}} \)) will consist of the carrying out of partial exams throughout the course, one of digital systems (units 1 and 2), one of algorithmic (unit 3) and one of networks and applications (units 4 and 5), with the following weightings:

\[ N_{\text{ac}} = 0.35 \times T_{1-2} + 0.35 \times T_3 + 0.3 \times T_{4-5} \]

The evaluation of the teaching in the laboratory (\( N_{\text{eL}} \)) will take into account the \( N_{\text{eLc}} \) note corresponding to the work in the computer room (activity and report) and the note of two written tests, PT2 (test on the practices of Unit 2) and PT3 (Test on the practices of the Unit 3)

\[ N_{\text{eL}} = 0.3 \times PT_1 + 0.3 \times PT_2 + 0.4 \times N_{\text{eLc}} \]

where

- \( N_{\text{eLc}} \): this is the qualification obtained in the reports carried out at the classroom (laboratory, informatics classroom).
  \[ N_{\text{eLc}} = 0.5 \times N_{\text{eLcT2}} + 0.5 \times N_{\text{eLcT3}} \]
  - \( N_{\text{eLcT2}} \): this is the qualification obtained in the classroom report of Unit 2.
  - \( N_{\text{eLcT3}} \): this is the qualification obtained in the classroom report of Unit 3.

The evaluation of the guided activities (\( N_{\text{ad}} \)) is:

\[ N_{\text{ad}} = 0.3 \times N_{\text{adT2}} + 0.4 \times N_{\text{adT3}} + 0.3 \times N_{\text{adT4-5}} \]

where

- \( N_{\text{adT2}} \): this is the qualification obtained in the guided activities of Unit 2.
- \( N_{\text{adT3}} \): this is the qualification obtained in the guided activities of Unit 3.
- \( N_{\text{adT4-5}} \): this is the qualification obtained in the guided activities of Unit 4-5.

The evaluation of the guided activities is to perform different activities, individual and formative nature made during the year (outside the classroom).

All of lab activities, tests or guided activities that are not carried out will be evaluated with zero, whenever that there has not been justifiable reason.

It will be considered as not presented all the students who do not present to the final exam.

Re-evaluation
All those students who obtain a grade equal to or greater than 3 and less than 5 will be entitled to a re-evaluation test.

Regulations for carrying out activities

All of lab activities, tests or guided activities that are not carried out will be evaluated with zero, whenever that there has not been justifiable reason.
It will be considered as not presented all the students who do not present to the final exam.
