Opening hours
Timetable: See ftp://ftp-urgell.upc.es/materials/inici.htm or Atenea, as indicated by the docent.

Prior skills
Basic chemistry, particularly atomic theory, electronic structure and electrochemistry.
Logarithmic and exponential functions.
Trigonometric functions.
Derivatives, integrals and basic calculations.
Office automation software (spreadsheets and word processors).

Degree competences to which the subject contributes
Specific:
On completion of the course, students should be able to:

· Distinguish between the different structures of materials and relate them with the materials' properties and applications.

Transversal:

1. SELF-DIRECTED LEARNING - Level 1. Completing set tasks within established deadlines. Working with recommended information sources according to the guidelines set by lecturers.

Teaching methodology

The course is divided up as follows:

- 20% face-to-face expository classes (theory)
- 10% face-to-face directed classes (problem solving)
- 10% practical work (laboratory)
- 57% self-directed learning (study)
- 3% exams

Learning objectives of the subject

On completion of the course, students should be able to:

· Distinguish between the different structures of materials and relate them with the materials' properties and applications.
· Understand and apply material-testing standards.

**Description:**
- Chemical bonds and types of materials.
- Crystalline structures and imperfections.
- Steady-state and non-steady-state diffusion.
- Plastic deformation mechanisms

**Related activities:**
- Practical 1. Metallographic preparation.
- Practical 3. Grain size measurement.

**Specific objectives:**
- Relate materials' electronic structures, chemical bonds and general properties to one another.
- Relate crystalline structures and their defects to the general behaviour of families of materials.
- Identify diffusion mechanisms in solid materials, their time dependence and applicable equations.
- Study plastic deformation mechanisms in metal materials, the potential interaction between crystalline network defects and the mechanical behaviour of the material. Infer the limit condition for plastic deformation.
- Practical 1. Learn and practise the method for metallographic preparation of metal materials and identify the goodness of a sample by comparing it to established standards.
- Practical 3. Establish and practise the grain size measurement method for metal materials and establish the order of magnitude.

### Mechanical Properties

**Description:**
- Elastic and plastic deformation.
- Mechanical tests.
- Failure and fracture mechanics.
- Fatigue.
- Creep.

**Related activities:**
- Practical 2. Traction and resilience tests.
- Practical 4. Material hardness tests.

**Specific objectives:**
- For students to acquire the ability to define the relevant properties of materials used in structural applications, the tests used to quantify these properties and the values typical of families of materials.
### Phase and Microstructure Control Diagrams.

<tr>
<td>TTT diagrams.</td>
<td></td>
</tr>
</tbody>
</table>

**Related activities:**  
Practical 5. Evolution of hardness according to the heat treatment and degree of plastic deformation applied to metal materials.

**Specific objectives:**  
For students to understand how phase diagrams work and the influence of heat treatment on the properties of materials.

### Corrosion and Degradation

<tbody>
<tr>
<td>Corrosion in metal materials.</td>
<td>Theory classes: 3h</td>
</tr>
<tr>
<td>Degradation of polymers and ceramics.</td>
<td>Self study: 8h</td>
</tr>
</tbody>
</table>

**Specific objectives:**  
For students to acquire the ability to define the conditions in which materials corrode and degrade, the properties that prevent corrosion and degradation and the most relevant families of materials.

**Description:**
- Electrical conduction.
- Semiconductors.
- Dielectrics.
- Other electrical properties.
- Thermal properties.
- Magnetic properties.
- Optical properties.

**Related activities:**

**Specific objectives:**
- For students to acquire the ability to define the properties of materials used in electrical, thermal, magnetic and optical applications, the tests used to quantify these properties and the typical values in specific families of materials.

**Material Selection**

</thead>
<tbody>
<tr>
<td>Theory classes: 6h</td>
</tr>
<tr>
<td>Self study: 5h</td>
</tr>
</tbody>
</table>

**Description:**
- Ashby diagrams.

**Specific objectives:**
- For students to acquire the ability to identify the properties that define a given application and select the material (or family of materials) that can best provide these properties.

**Qualification system**

- Partial exam: 30%
- Final exam: 50%
- Laboratory: 15%
- Self-directed learning: 5%

The subject has a reevaluation test according to specific regulations of the school.

**Regulations for carrying out activities**

The use of any electronic equipment with wireless communication capabilities is strictly forbidden in the evaluations.
