

Course guide

820094 - CCCEEPF - Climate Change: Science, Energy, Economics, Politics and the Future

Last modified: 10/07/2023

Unit in charge: Barcelona East School of Engineering
Teaching unit: 717 - DEGD - Department of Engineering Graphics and Design.
749 - MAT - Department of Mathematics.
748 - FIS - Department of Physics.

Degree: BACHELOR'S DEGREE IN CHEMICAL ENGINEERING (Syllabus 2009). (Optional subject).
BACHELOR'S DEGREE IN ELECTRICAL ENGINEERING (Syllabus 2009). (Optional subject).
BACHELOR'S DEGREE IN ENERGY ENGINEERING (Syllabus 2009). (Optional subject).
BACHELOR'S DEGREE IN INDUSTRIAL ELECTRONICS AND AUTOMATIC CONTROL ENGINEERING (Syllabus 2009). (Optional subject).
BACHELOR'S DEGREE IN MECHANICAL ENGINEERING (Syllabus 2009). (Optional subject).
BACHELOR'S DEGREE IN MATERIALS ENGINEERING (Syllabus 2010). (Optional subject).

Academic year: 2023 **ECTS Credits:** 3.0 **Languages:** Catalan, Spanish

LECTURER

Coordinating lecturer: OLGA ALCARAZ SENDRA

Others: OLGA ALCARAZ SENDRA
PABLO BUENESTADO CABALLERO
BARBARA SUREDA CARBONELL

PRIOR SKILLS

Not called in; is advisable to have studied the course 820019 - TMS

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Transversal:
02 SCS N3. SUSTAINABILITY AND SOCIAL COMMITMENT - Level 3. Taking social, economic and environmental factors into account in the application of solutions. Undertaking projects that tie in with human development and sustainability.

TEACHING METHODOLOGY

It will be used expository methodology, analysis and development of case studies (mainly with characteristics of self-learning), realization of practices, open debates in class and realization of assessments.

LEARNING OBJECTIVES OF THE SUBJECT

The student should acquire essential knowledge about the climate change problematique, from the point of view of: its causes and scientific manifestations, anthropocentric drivers factors, the world's energy problems, the economic dynamics during the last 200 years, the inability of the political decision to deal with it, and future prospects of everything.

STUDY LOAD

Type	Hours	Percentage
Self study	45,0	60.00
Hours large group	30,0	40.00

Total learning time: 75 h

CONTENTS

1. Presentations and introductions

Description:

- Several but important presentations and introductions for the good development of the course in all its aspects

Specific objectives:

- Presenting the objectives, program, bibliography, methodology, etc. of course
- Introduction to the work activities and assessment methods.
- Give the key dates of the course during the academic year.

Full-or-part-time: 5h

Theory classes: 2h

Self study : 3h

2. Science of climate change

Description:

- On scientific knowledge it has of the causes and effects of anthropogenic global warming and climate change

Specific objectives:

- Understand the scientific principles governing the average temperature at the Earth's surface
- Know the anthropogenic reasons that explain the variation of the temperature and therefore the foundations of global warming and climate change
- Get intensifying the greenhouse effect and its anthropogenic interference with the carbon cycle
- The GHG and CO₂ equivalent units
- Know the evidence of climate change from a historical point of view. The main manifestations and effects of global warming

Full-or-part-time: 10h

Theory classes: 4h

Self study : 6h

3. Energy, economy and climate change

Description:

- Factors driving anthropogenic climate change; primary energy vector; and identity $I = PAT$

Specific objectives:

- Understand historical trends and present recent exponential phenomenology of the drivers factors of climate change
- Know the numbers and orders of magnitude of the phenomena. Emissions and concentrations
- Know the $I = PAT$ identity

Full-or-part-time: 5h

Theory classes: 2h

Self study : 3h

4. Evaluation of the CO2 emissions associated with the energy mix vector

Description:

- Identification of primary energy vectors, and from them, calculating CO2 emissions

Specific objectives:

- Know the primary energy vectors
- Apply methods for calculating CO2 emissions associated with fossil-based primary energy

Full-or-part-time: 5h

Theory classes: 2h

Self study : 3h

5.The Kaya identity and the analysis of the role of the different driven factors in the CO2 emissions

Description:

- Learn to understand the role of different factors drivers CO2 emissions

Specific objectives:

- Deepen the information that gives us the identity of Kaya
- Analyze the role on different case studies by different factors drivers CO2 emissions

Full-or-part-time: 5h

Theory classes: 2h

Self study : 3h

6.The multilateral policy and the agendas fighting against climate change

Description:

- From the environmental summits and the creation of the IPCC ... towards Paris 2015 ... through the UNFCCC, the Kyoto Protocol and the failure of Copenhagen

Specific objectives:

- Saber de les NNUU, els tractats internacionals i la seva aplicació i evolució en el tema subjecte de l'assignatura
- Descriure la cronologia política i institucional fonamental de la lluita contra el canvi climàtic
- Conèixer la UNFCCC
- Conèixer el Protocol de Kyoto
- Saber del fracàs de Copenhagen
- Sobre les diferents responsabilitats històriques

Full-or-part-time: 10h

Theory classes: 4h

Self study : 6h

7.The Paris Agreement and the future

Description:

- The Paris Agreement 2015

Specific objectives:

- Understand and analyze the reasons, characteristics and key elements of the 2015 Paris Agreement
- Future NDCs and its future aggregate analysis

Full-or-part-time: 5h

Theory classes: 2h

Self study : 3h

8. The IPCC, the assessment reports.

Description:

- Creation and fundamental role of the IPCC
- The SR15 and the AR6
- Climate scenarios compatible with the objectives of the Paris Agreement

Specific objectives:

- Know the future scenarios of the IPCC and the possible climate change mitigation objectives in the perspective of the first decade of the century
- The concept of Global Carbon Budget and specific objectives of stabilizing the Earth's temperature

Full-or-part-time: 5h

Theory classes: 3h

Self study : 2h

9. The SSP scenarios and the NDCs

Description:

- The IPCC AR6 SSPs scenarios
- The NDCs of the Paris Agreement

Specific objectives:

- Know the SSPs AR6 scenarios and learn how to calculate carbon budgets and its relation to the objectives of stabilizing land temperatures
- Learning to analyze countries NDCs

Full-or-part-time: 5h

Theory classes: 2h

Self study : 3h

GRADING SYSTEM

Attendance and active participation in debates and exercises in the theoretical sessions: 15%

Each of the four sessions of practices: 12% (up to a total of 45%)

Final control: 37%

EXAMINATION RULES.

Test type
