Degree competences to which the subject contributes

Specific:
1. Carry out calculations for the design of electrical machines.
2. Apply regulations and standards based on sound criteria.
3. Summarise information and undertake self-directed learning activities.

Transversal:
4. SELF-DIRECTED LEARNING - Level 3. Applying the knowledge gained in completing a task according to its relevance and importance. Deciding how to carry out a task, the amount of time to be devoted to it and the most suitable information sources.

Teaching methodology

Expositive methodology for theory classes.
PBL for exercises classes.
Training on FE software on laboratory classes.

Learning objectives of the subject

Prior skills
MAtrix analysis.
Fourier Methods.
Electromagnetics.
Electrical Machines 1 and 2.
Use of scientific calculator (HP 50G, CFX9950, other)
Use of MATLAB

Requirements
Eletrical Machines 1 and 2.
820143 - EMDEE - Electrical Machines Design

- To do to the student a general scope in the field of electrical machines and drives. The main treated aspects are their modelling and design.
- To put into practice the FE method to analyse and design electrical machines and apparatus
- Explain general rules and methods for size electrical machines.
- Explain the main characteristics for materials used in the electrical machines to obtain an optimal design (technical, economical, environmental, etc. criterions are used)

<tr>
<td>Self study: 10h</td>
<td></td>
</tr>
</tbody>
</table>

**Description:**
General expressions for torque. Standards. Scale laws. Flux constant and weakening field work of electrical machines.
## Optimal design methods.

**Learning time:** 18h  
Theory classes: 6h  
Laboratory classes: 2h  
Self study: 10h

**Description:**  

**Related activities:**  
Optimal design of an actuator.

## Parameter and losses calculation

**Learning time:** 15h  
Theory classes: 3h  
Laboratory classes: 2h  
Self study: 10h

**Description:**  
FE determination of: losses, emf, cogging torque, torque, inductance, resistance, capacitance, etc.

**Related activities:**  
Transformer analysis.

## Heat transfer

**Learning time:** 18h  
Theory classes: 6h  
Laboratory classes: 2h  
Self study: 10h

**Description:**  

**Related activities:**  
Thermal analysis of a transformer: steady state calculation, transient calculation.  
Combined electromagnetic+thermal analysis.
### Design process

**Description:**
General formulation for sizing electrical machines. Application to: asynchronous, synchronous and permanent magnet machines. Every course one or more detailed process design will be developed.

**Related activities:**
- FE analysis of:
  - asynchronous machine. Steady state characteristics
  - synchronous PM machine. Torque-angle characteristic, cogging torque, EMF determinations.
  - Radial forces. Noise analysis.

**Learning time:** 33h
- Theory classes: 9h
- Laboratory classes: 4h
- Self study: 20h

### Insulation of electrical machines

**Description:**
Insulation materials. Monitoring insulation. Statistical analysis. Predictive analysis

**Learning time:** 13h
- Theory classes: 3h
- Self study: 10h

### Qualification system

- Final test: 20%
- Laboratory: 20%
- Homework exercises + class exercises: 20%
- Homework project (design an electrical machines): 40%

### Regulations for carrying out activities

Final test with open books. NO final reexam.
