820228 - REGA - Automatic Regulation

Coordinating unit: 295 - EEBE - Barcelona East School of Engineering
Teaching unit: 707 - ESAII - Department of Automatic Control
Academic year: 2017
Degree: BACHELOR'S DEGREE IN INDUSTRIAL ELECTRONICS AND AUTOMATIC CONTROL ENGINEERING (Syllabus 2009). (Teaching unit Compulsory)
ECTS credits: 6

Teaching staff
Coordinator: Beatriz F. Giraldo Giraldo
Others: José María Huerta Sánchez

Opening hours
Timetable: To be determined at the beginning of the semester. It will be made public to all students during the first week.

Prior skills
Electrical systems, mechanical systems, Mathematics

Requirements
Industrial Control and Automation

Degree competences to which the subject contributes

Specific:
CEEIA-25. Model and simulate systems.

Transversal:
2. TEAMWORK - Level 3. Managing and making work groups effective. Resolving possible conflicts, valuing working with others, assessing the effectiveness of a team and presenting the final results.
3. EFFECTIVE USE OF INFORMATION RESOURCES - Level 3. Planning and using the information necessary for an academic assignment (a final thesis, for example) based on a critical appraisal of the information resources used.

Teaching methodology
The course uses expositive methodology by 20%, an individual class work (problems) by 10%, teamwork (laboratory) by 10%, and individual and group work non-attendance by 60%.

Learning objectives of the subject
At the end of the course the student will be able to:
1. To acquire basic skills in modeling dynamic systems.
2. To define and know how to apply the general methods of systems analysis.
3. To define and know how to apply the general methods of designing control systems in continuous time.
4. To know how to configure and tune different types of controllers used in the industry.
5. Teamwork.
6. Manage information resources in the field of control systems.

**Description:**
### 4. Stability of linear systems

- **Learning time:** 20h
  - Theory classes: 6h
  - Laboratory classes: 2h
  - Self study: 12h

**Description:**

### 5. Root locus method

- **Learning time:** 10h
  - Theory classes: 3h
  - Laboratory classes: 2h
  - Self study: 5h

**Description:**
Concept of the root locus. Application of the root locus method to the analysis and design of control systems.

### 6. Controllers

- **Learning time:** 40h
  - Theory classes: 10h 30m
  - Laboratory classes: 3h
  - Self study: 26h 30m

**Description:**
Integral action "antiwindup". Controllers with two degrees of freedom: PI-D and I-PD controller.
Empirical and analytical tuning of controllers.
Controller by state vector feedback: controllability concept.

### Qualification system

- Partial controls (2): 30%
- Last control: 40%
- Practices: 15%
- Others test/projects: 10%
- Generic competition "Teamwork": 5%

In this subject will schedule a reassessment
Regulations for carrying out activities

The written tests take place within the class schedule.
Practical tests carried out in the laboratory.
