Bachelor's degree in Aerospace Systems Engineering and Telecommunications Systems Engineering or Network Engineering (double degree)

2017-2018 academic year

This double degree, for which the admissions procedure requires applicants to pre-enrol but not take an entrance exam, provides multidisciplinary training in the fields of aerospace systems engineering and telecommunications systems engineering.

The Castelldefels School of Telecommunications and Aerospace Engineering (EETAC) teaches this double degree—the only one of its kind in Spain—with the aim of responding to the demand for highly qualified professionals in the telecommunications and aerospace engineering sectors.

Students graduate with two official bachelor's degrees after five years of study (including the bachelor's thesis). They can choose any one of the two majors of the bachelor's degree in Aerospace Systems Engineering and one of two degrees, in Telecommunications Systems Engineering or Network Engineering.

Majors

- Air Navigation
- Airports

INTRODUCTION

Delivery
Face-to-face

Fees and grants
Approximate fees per academic year: €2,400 (€3,600 for non-EU residents). Consult the public fees system based on income (grants and payment options).

ADMISSION

Places
40

Registration and enrolment
