

Guia docent

240714 - 240714 - Física I

Última modificació: 16/04/2024

Unitat responsable: Escola Tècnica Superior d'Enginyeria Industrial de Barcelona
Unitat que imparteix: 748 - FIS - Departament de Física.

Titulació: GRAU EN TECNOLOGIES INDUSTRIALS I ANÀLISI ECONÒMICA (Pla 2018). (Assignatura obligatòria).

Curs: 2024

Crèdits ECTS: 6.0

Idiomes: Anglès

PROFESSORAT

Professorat responsable: Sempau, Josep

Altres: Grossi, Claudia

METODOLOGIES DOCENTS

The teaching methodology is based on four elements: (i) theory sessions, aimed at increasing the student's knowledge of the topics presented; (ii) practice sessions, devoted to provide students with problem-solving skills; (iii) laboratory sessions, oriented towards experimental and data-analysis abilities; and (iv) self-study, which involves studying without direct supervision in the classroom. This structure is intended to supply half of the knowledge, skills and competences expected from a freshman's physics course for engineers -the second half being covered in the "Physics 2" course.

During the theory sessions the fundamental concepts, together with some illustrative examples and relevant applications, will be presented. These sessions are expected to cover 20% of the total learning time.

Practice sessions will be used to learn solving numerical problems and exercises, encouraging students to actively participate with an inquiring attitude. This part is expected to cover 15% of the total learning time.

In the laboratory students will have the opportunity to gain hands-on experience about the application of the scientific method to solve practical problems. They will use experimental and data analysis techniques to take measurements, analyze the data generated and draw conclusions. The experimental work will take, including the preparatory steps in the classroom, 5% of the total learning time.

Finally, during self-study time students will be strongly encouraged to use some of these techniques: (i) read additional material suggested by the teacher, since reading from different authors with different viewpoints is a highly effective way to increase understanding of new concepts; (ii) work through practice questions to reinforce skills that are learned at the classroom; (iii) watch educational videos suggested by the teacher, or those found by students themselves, since this is a powerful way to keep students actively engaged in a concept; and (iv) discuss with your classmates about theoretical and practical aspects of the presented material.

OBJECTIUS D'APRENENTATGE DE L'ASSIGNATURA

The main objective of this course is to provide basic knowledge, skills and competences in the fields of classical vectorial mechanics and, to a limited extent, of classical thermodynamics so that students are capable of using their principles and methods in a variety of applications in engineering.

HORES TOTALS DE DEDICACIÓ DE L'ESTUDIANTAT

Tipus	Hores	Percentatge
Hores grup petit	8,0	5.33
Hores grup gran	52,0	34.67
Hores aprenentatge autònom	90,0	60.00

Dedicació total: 150 h

CONTINGUTS

1. Mathematical methods

Descripció:

1. The language of physics
2. Measurement and uncertainty
3. Vector algebra
4. Vector calculus

Dedicació: 9h

Grup gran/Teoria: 2h

Grup mitjà/Pràctiques: 1h

Aprendentatge autònom: 6h

2. Kinematics of a particle

Descripció:

- 1 Position, velocity, acceleration
- 2 3D motion
- 3 Relative motion
- 4 Introduction to special relativity

Dedicació: 19h

Grup gran/Teoria: 4h

Grup mitjà/Pràctiques: 3h

Aprendentatge autònom: 12h

3. Dynamics of a particle

Descripció:

1. Introduction: Newton's Principia and the historical context.
- 2 Newton's First Law of motion
- 3 Newton's Second Law of motion
- 4 Momentum and impulse
- 5 Newton's Third Law of motion
- 6 Common forces
- 7 Angular momentum

Dedicació: 19h

Grup gran/Teoria: 4h

Grup mitjà/Pràctiques: 3h

Aprendentatge autònom: 12h

4. Work and energy

Descripció:

- 1 Mechanical work
- 2 Kinetic energy
- 3 Potential and mechanical energy
- 4 Potential energy and stability
- 5 Trajectory solutions

Dedicació: 19h

Grup gran/Teoria: 4h
Grup mitjà/Pràctiques: 3h
Aprenentatge autònom: 12h

5. Dynamics of a system of particles

Descripció:

- 1 Systems of particles
- 2 Internal and external forces
- 3 Center of mass
- 4 Conservation of momentum
- 5 Conservation of angular momentum
- 6 Angular momentum in the CM
- 7 Conservation of mechanical energy
- 8 Kinetic energy in the CM
- 9 Ideal constraints
- 10 Setbacks of vectorial mechanics

Dedicació: 23h

Grup gran/Teoria: 4h
Grup mitjà/Pràctiques: 3h
Grup petit/Laboratori: 4h
Aprenentatge autònom: 12h

6. Dynamics of a rigid body

Descripció:

- 1 Definition of rigid body
- 2 Kinematics of rigid bodies
- 3 Angular momentum of a rigid body
- 4 Dynamics of a rigid body
- 5 Calculation of the moment of inertia
- 6 Kinetic energy of rotation
- 7 Rolling bodies
- 8 Gyroscopic motion
- 9 Cogwheels

Dedicació: 23h

Grup gran/Teoria: 4h
Grup mitjà/Pràctiques: 3h
Grup petit/Laboratori: 4h
Aprenentatge autònom: 12h

7. Work, Heat and the First Law

Descripció:

- 1 Introduction - Definitions
- 2 Eq. of state
- 3 Zeroth Law: Temperature
- 4 Simple thermodynamic systems
- 5 Pressure. Temperature revisited
- 6 Work
- 7 Heat
- 8 First Law: Internal energy

Dedicació: 19h

Grup gran/Teoria: 4h
Grup mitjà/Pràctiques: 3h
Aprendentatge autònom: 12h

8. Heat engines and the Second Law

Descripció:

- 1 Reversibility
- 2 Heat engines
- 3 The Second Law: entropy

Dedicació: 19h

Grup gran/Teoria: 4h
Grup mitjà/Pràctiques: 3h
Aprendentatge autònom: 12h

SISTEMA DE QUALIFICACIÓ

The overall course grade is calculated as:

$$\text{Grade} = \max(\text{Grade_A}, \text{Grade_B})$$

with

$$\text{Grade_A} = 0.30 \text{ Probs} + 0.30 \text{ Test} + 0.20 \text{ Lab} + 0.20 \text{ Midterm}$$

$$\text{Grade_B} = 0.40 \text{ Probs} + 0.40 \text{ Test} + 0.20 \text{ Lab}$$

where,

Grade: Final grade of the course.

Probs: Mark obtained in the problems exam.

Test : Mark obtained in the test exam.

Lab: Average mark of the laboratory reports delivered at the end of each lab session.

Midterm: Mark obtained in the midterm exam.

Students that fail the course will be given the opportunity to take a second-chance exam ("re-evaluation"). The final grade will then be:

$$\text{Grade} = 0.8 \text{ Exam2} + 0.2 \text{ Lab}$$

where

Exam2: Mark obtained in the second-chance exam.

Note that the laboratory sessions will not be repeated and, therefore, the corresponding mark in the previous formula is the same value used for the first evaluation.
