

## Guía docente

# 205224 - RESS - Exploración Robótica del Sistema Solar

Última modificación: 19/04/2023

**Unidad responsable:** Escuela Superior de Ingenierías Industrial, Aeroespacial y Audiovisual de Terrassa

**Unidad que imparte:** 748 - FIS - Departamento de Física.

**Titulación:** GRADO EN INGENIERÍA EN TECNOLOGÍAS AEROESPACIALES (Plan 2010). (Asignatura optativa).  
GRADO EN INGENIERÍA EN VEHÍCULOS AEROESPACIALES (Plan 2010). (Asignatura optativa).

**Curso:** 2023

**Créditos ECTS:** 3.0

**Idiomas:** Inglés

## PROFESORADO

**Profesorado responsable:** Manel Soria

**Otros:** Manel Soria  
Arnaud Miró

## CAPACIDADES PREVIAS

General concepts of aerospace vehicles. Programming skills in any computer language (preferably, Matlab). Deep interest for space engineering.

It is advisable to have taken the course 220013 Vehicles Aeroespaciales.

## REQUISITOS

## METODOLOGÍAS DOCENTES

The course will be developed through theoretical lectures and hands-on sessions where the students will study previous robotic probes and their scientific results. In many cases, the students will need to develop small computer codes to process the large amounts of data available. Where possible, the original data such as RAW images or SPICE kernels will be used for the class examples, as well as the original journal papers.

## OBJETIVOS DE APRENDIZAJE DE LA ASIGNATURA

- Have a basic knowledge of the main solar system bodies and the main present, projected and previous exploration probes such as Voyager or Cassini.
- Understand at an introductory level the main space engineering concepts involved in the design of the probes, such as attitude control system, electric power or propulsion.
- Understand the main remote sensing instruments and techniques such as multispectral cameras or radio occultation at an introductory level.
- Understand at an introductory level the digital image formats and main processing algorithms such as contrast adjustment or registration.
- Understand at an introductory level the NASA SPICE library (goal, main functions, kernels, etc) and be able to use it to calculate the position, velocity, camera orientation etc of different spacecraft.
- Be able to combine SPICE kernels with RAW images information to produce relevant information of celestial bodies (such as, for instance, volcanic eruptions in Io).

## HORAS TOTALES DE DEDICACIÓN DEL ESTUDIANTADO

Tipo	Horas	Porcentaje
Horas aprendizaje autónomo	45,0	60.00
Horas grupo grande	30,0	40.00

**Dedicación total:** 75 h

## CONTENIDOS

### Module 1: Introduction to the Solar System and its exploration

#### Descripción:

Solar system bodies (planets, asteroids, comets, Kuiper belt objects). Robotic probes and their missions: Flyby encounters, orbiters, landers, rovers, drones.

#### Dedicación:

Grupo grande/Teoría: 10h

Aprendizaje autónomo: 15h

### Module II. Introduction to imaging instruments and image processing technology

#### Descripción:

Lenses. Image sensors. Monochrome, color and multispectral images. Introduction to image processing algorithms.

#### Dedicación:

Grupo grande/Teoría: 10h

Aprendizaje autónomo: 15h

### Module III. Introduction to NASA JPL SPICE library

#### Descripción:

SPICE overview. Functions and kernels. MICE (SPICE for Matlab). Frames. Time. Obtaining spacecraft position and velocity. Time windows. Occultations. Camera kernels and application examples.

#### Dedicación:

Grupo grande/Teoría: 10h

Aprendizaje autónomo: 15h

## SISTEMA DE CALIFICACIÓN

Class participation and class exercises: 30%

Assignment: 30%

Project: 40%

Students with a grade below 5.0 in the project, or the assignments, or the classroom participation, will be able to take an additional written exam covering all the subject, that will take place in the date fixed in the calendar of final exams. The grade obtained in this exam will range between 0 and 10, and will replace the part or parts below 5.0 only in case it is higher, up to a maximum of 5.0 points.
