

Course guide

200006 - CI - Integral Calculus

Last modified: 19/05/2024

Unit in charge:	School of Mathematics and Statistics		
Teaching unit:	749 - MAT - Department of Mathematics.		
Degree:	BACHELOR'S DEGREE IN MATHEMATICS (Syllabus 2009). (Compulsory subject).		
Academic year: 2024	ECTS Credits: 7.5	Languages: Catalan, Spanish	

LECTURER

Coordinating lecturer:	ODÍ SOLER I GIBERT
Others:	Primer quadrimestre: GISSELL ESTRADA RODRÍGUEZ - M-A, M-B JAIME FRANCH BULLICH - M-A, M-B CHARA PANTAZI - M-A, M-B ODÍ SOLER I GIBERT - M-A, M-B

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Specific:

1. CE-2. Solve problems in Mathematics, through basic calculation skills, taking in account tools availability and the constraints of time and resources.
2. CE-3. Have the knowledge of specific programming languages and software.
3. CE-4. Have the ability to use computational tools as an aid to mathematical processes.

Generical:

4. CB-1. Demonstrate knowledge and understanding in Mathematics that is founded upon and extends that typically associated with Bachelor's level, and that provides a basis for originality in developing and applying ideas, often within a research context.
5. CB-2. Know how to apply their mathematical knowledge and understanding, and problem solving abilities in new or unfamiliar environments within broader or multidisciplinary contexts related to Mathematics.
6. CB-3. Have the ability to integrate knowledge and handle complexity, and formulate judgements with incomplete or limited information, but that include reflecting on social and ethical responsibilities linked to the application of their knowledge and judgements.
7. CG-1. Show knowledge and proficiency in the use of mathematical language.
8. CG-2. Construct rigorous proofs of some classical theorems in a variety of fields of Mathematics.
9. CG-3. Have the ability to define new mathematical objects in terms of others already know and ability to use these objects in different contexts.
10. CG-4. Translate into mathematical terms problems stated in non-mathematical language, and take advantage of this translation to solve them.
12. CG-6 Detect deficiencies in their own knowledge and pass them through critical reflection and choice of the best action to extend this knowledge.

Transversal:

11. SELF-DIRECTED LEARNING. Detecting gaps in one's knowledge and overcoming them through critical self-appraisal. Choosing the best path for broadening one's knowledge.

TEACHING METHODOLOGY

During lectures, the students will be introduced and guided through the contents of the course.

There will be a problem list with many problems. Some of these will be solved during problem sessions, while others will be left for the students to solve autonomously.

LEARNING OBJECTIVES OF THE SUBJECT

(Section not available)

STUDY LOAD

Type	Hours	Percentage
Hours small group	30,0	16.00
Hours large group	45,0	24.00
Self study	112,5	60.00

Total learning time: 187.5 h

CONTENTS

1. Improper Integrals and Numerical Series

Description:

Basic Definitions. Convergence Criteria for Numerical Series and Improper Integrals. Relationship between Improper Integrals and Series. Improper Integrals depending on a Parameter.

Full-or-part-time: 37h

Theory classes: 6h

Practical classes: 6h

Self study : 25h

2. Multiple Integrals

Description:

The Riemann Integral of Several Variables Functions. The Lebesgue Criterion for Riemannian Integrability. Fubini's Theorem. Change of Variable Theorem. Applications. Improper Integrals.

Full-or-part-time: 60h 30m

Theory classes: 12h

Practical classes: 8h

Self study : 40h 30m

3. Line and Surface Integrals

Description:

Parametrized Curves. Line Integrals of Functions and Vector Fields. Integration and Equivalent Curves. Parametrized Surfaces. Surface Integrals of Functions and Vector Fields. Integration and Equivalent Surfaces.

Full-or-part-time: 24h

Theory classes: 5h

Practical classes: 3h

Self study : 16h

4. Integral Theorems

Description:

Gradient, Divergence and Curl. Green's Theorem, Stokes' Theorem and Gauss' Theorem. Applications: conservative and solenoidal vector fields.

Full-or-part-time: 37h 30m

Theory classes: 7h 30m

Practical classes: 5h

Guided activities: 25h

5. Differential Forms

Description:

Review of Multilinear Algebra. Differential Forms in \mathbb{R}^n and in submanifolds. Exterior Derivative. Integration of Forms. Green, Stokes and Gauss' Theorems.

Full-or-part-time: 28h 30m

Theory classes: 6h 30m

Practical classes: 3h

Self study : 19h

GRADING SYSTEM

There will be a midterm exam (P), a final exam (F) and continuous assessment activities (AC). Both the exams calendar and the continuous assessment activities will be announced during the beginning of the course.

The continuous assessment qualification (NC) will be computed using the formula

$$NC = (0,30 \cdot P + 0,10 \cdot AC) / 0,40.$$

The final course grade (NF) will be computed as

$$NF = \text{Max} \{0,40 \cdot NC + 0,60 \cdot F; F\}.$$

An extra exam will take place on July for students that failed during the regular semester.
