

Course guide

200153 - CN - Numerical Calculus

Last modified: 11/04/2024

Unit in charge:	School of Mathematics and Statistics	
Teaching unit:	751 - DECA - Department of Civil and Environmental Engineering.	
Degree:	BACHELOR'S DEGREE IN MATHEMATICS (Syllabus 2009). (Compulsory subject).	
Academic year: 2024	ECTS Credits: 7.5	Languages: Catalan

LECTURER

Coordinating lecturer:	SONIA FERNANDEZ MENDEZ
Others:	Primer quadrimestre: SONIA FERNANDEZ MENDEZ - M-A, M-B ABEL GARGALLO PEIRO - M-A, M-B ESTHER SALA LARDIES - M-A, M-B

PRIOR SKILLS

Numerical linear algebra
Differential and integral calculus

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Specific:

1. CE-2. Solve problems in Mathematics, through basic calculation skills, taking in account tools availability and the constraints of time and resources.
2. CE-3. Have the knowledge of specific programming languages and software.
3. CE-4. Have the ability to use computational tools as an aid to mathematical processes.

General:

5. CB-1. Demonstrate knowledge and understanding in Mathematics that is founded upon and extends that typically associated with Bachelor's level, and that provides a basis for originality in developing and applying ideas, often within a research context.
6. CB-2. Know how to apply their mathematical knowledge and understanding, and problem solving abilities in new or unfamiliar environments within broader or multidisciplinary contexts related to Mathematics.
7. CB-3. Have the ability to integrate knowledge and handle complexity, and formulate judgements with incomplete or limited information, but that include reflecting on social and ethical responsibilities linked to the application of their knowledge and judgements.
8. CG-1. Show knowledge and proficiency in the use of mathematical language.
9. CG-2. Construct rigorous proofs of some classical theorems in a variety of fields of Mathematics.
10. CG-3. Have the ability to define new mathematical objects in terms of others already know and ability to use these objects in different contexts.
11. CG-4. Translate into mathematical terms problems stated in non-mathematical language, and take advantage of this translation to solve them.
12. CG-6 Detect deficiencies in their own knowledge and pass them through critical reflection and choice of the best action to extend this knowledge.

Transversal:

4. SELF-DIRECTED LEARNING. Detecting gaps in one's knowledge and overcoming them through critical self-appraisal. Choosing the best path for broadening one's knowledge.

TEACHING METHODOLOGY

(see Catalan version)

LEARNING OBJECTIVES OF THE SUBJECT

(see Catalan version)

STUDY LOAD

Type	Hours	Percentage
Hours large group	45,0	24.00
Hours small group	30,0	16.00
Self study	112,5	60.00

Total learning time: 187.5 h

CONTENTS

Root finding

Description:

(see Catalan version)

Full-or-part-time: 10h

Theory classes: 6h

Practical classes: 4h

Systems of non-linear equations

Description:

(see Catalan version)

Full-or-part-time: 10h

Theory classes: 6h

Practical classes: 4h

Function approximation

Description:

(see Catalan version)

Full-or-part-time: 20h

Theory classes: 12h

Practical classes: 8h

Numerical integration

Description:

(see catalan version)

Full-or-part-time: 15h

Theory classes: 9h

Practical classes: 6h

Introduction to numerical methods for differential equations

Description:

(see catalan version)

Full-or-part-time: 20h

Theory classes: 12h

Practical classes: 8h

GRADING SYSTEM

(see Catalan version)
