

# Course guide 230075 - TCGI - Internet Transport, Control and Management

Unit in charge: Teaching unit:	Barcelona School of Teleco 744 - ENTEL - Departmen	Last modified: 24/05/2024 ommunications Engineering t of Network Engineering.
Degree:	BACHELOR'S DEGREE IN TELECOMMUNICATIONS TECHNOLOGIES AND SERVICES ENGINEERING (Syllabus 2015). (Optional subject).	
Academic year: 2024	ECTS Credits: 6.0	Languages: Catalan, Spanish

LECTURER	
Coordinating lecturer:	ISRAEL MARTÍN ESCALONA
Others:	Primer quadrimestre: JUAN JOSE ALINS DELGADO - 51, 53 OSCAR ESPARZA MARTIN - 51, 53 ISRAEL MARTÍN ESCALONA - 51, 53 JOSE LUIS MUÑOZ TAPIA - 51, 53
	Segon quadrimestre: JUAN JOSE ALINS DELGADO - 11, 13 OSCAR ESPARZA MARTIN - 11, 13 ISRAEL MARTÍN ESCALONA - 11, 13

## **PRIOR SKILLS**

Basic Linux.

# **DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES**

#### Transversal:

06 URI N3. EFFECTIVE USE OF INFORMATION RESOURCES - Level 3. Planning and using the information necessary for an academic assignment (a final thesis, for example) based on a critical appraisal of the information resources used.

## **TEACHING METHODOLOGY**

Guided activities lectures Laboratory Classes Individual work (distance learning) Short answer tests (Control) Multiple choice tests Laboratory practices

# LEARNING OBJECTIVES OF THE SUBJECT

The goal of this course is to teach the most relevant aspects concerning routing protocols, transport and control in telecommunications networks, in particular, in the Internet.

Based on the knowledge about static routing acquired in previous courses, will present the different algorithms and dynamic routing protocols, both unicast and multicast. In addition, we will discuss certain protocols necessary for the Internet operation and some typical applications such as WWW.

Learning outcomes:

- It has capacity to build, operate and manage networks, services, processes and telecommunications applications from the point of view of telematic services.

- Is able to apply the techniques of switching and routing in fixed and mobile environments.

- Understands and applies the most appropriate protocols to transport information correctly and keep the sessions during transmission.

- Use the tools necessary to easily build, operate and manage ICT services, especially those related to the Internet, web and multimedia.

- Be familiar with the protocols and communication interfaces at different levels of the network architecture and be able to describe them, program them, validate them and optimize them.

- Know the technological progress of transmission, switching and the process to improve networks and online services.

- Design and implement a good strategy for searching specialized information. Identify the relevance and quality of this information.

- Perform tasks based on the guidelines set by the teacher, taking the time and the resources necessary. Assesses own strengths and weaknesses and act accordingly.

## **STUDY LOAD**

Туре	Hours	Percentage
Self study	85,0	56.67
Hours large group	39,0	26.00
Hours small group	26,0	17.33

Total learning time: 150 h

## CONTENTS

### Chapter1. Switching review

#### Description:

Basic switching concepts review. Switches, spanning tree and VLANs with Linux.

Related activities:

Laboratory practice. Evaluation of the practice.

Full-or-part-time: 10h 30m Theory classes: 4h 30m Laboratory classes: 2h Self study : 4h

## Tema 2. IP Review

**Description:** IP basics review and static routing.

**Related activities:** Laboratory practice. Evaluation of the practice.

Full-or-part-time: 10h 30m Theory classes: 4h 30m Laboratory classes: 2h Self study : 4h

## **Chapter 3. Network Applications**

#### **Description:**

Network applications and their relationship to the operating system. File descriptors and client server architecture. Use of the netcat tool.

**Related activities:** Laboratory practice. Evaluation of the practice.

**Full-or-part-time:** 9h Theory classes: 3h Practical classes: 2h Self study : 4h

#### **Chapter 4. DNS and DHCP**

#### **Description:**

Explanation of the name to IP translation system. Dynamic address assignment (DHCP).

**Related activities:** Laboratory practice. Evaluation of the practice.

Full-or-part-time: 15h Theory classes: 6h Laboratory classes: 4h Self study : 5h

#### Chapter 5. WWW

**Description:** WWW including basic HTML and HTTP. Proxy services and load balancing. Securing communications (HTTPS)

**Related activities:** Laboratory practice. Evaluation of the practice.

Full-or-part-time: 17h Theory classes: 7h Laboratory classes: 5h Self study : 5h

#### Chapter 6. Firewalls and address translation

## **Description:**

Firewall rules with iptables and dynamic address translation (NAT).

**Related activities:** Laboratory practice. Evaluation of the practice.

**Full-or-part-time:** 9h Theory classes: 3h Laboratory classes: 2h Self study : 4h

## **Chapter 7. Tunnels**

#### Description:

Description of networking technologies for tunnels.

# **Related activities:**

Laboratory practice. Evaluation of the practice.

**Full-or-part-time:** 9h Theory classes: 3h Laboratory classes: 2h Self study : 4h

## Chapter 8. Virtualization of services using containers

# Description:

Introduction to containers Docker containers Deployment of services

**Related activities:** Laboratory practice. Evaluation of the practice.

**Full-or-part-time:** 12h Theory classes: 5h Laboratory classes: 3h Self study : 4h

# ACTIVITIES

## Laboratori exam with short answers

**Description:** Partial exams of laboratory

**Full-or-part-time:** 2h Laboratory classes: 2h

## Final exam

**Description:** Final exam

**Full-or-part-time:** 3h Theory classes: 3h

# **GRADING SYSTEM**

7 Test assesments: 10% x 7 = 70% Laboratory control: 30%
