

Course guide 240657 - 240657 - Industrial Equipment and Facilities

Last modified: 16/04/2024

Unit in charge: Teaching unit:	Barcelona School of Industrial Engineering 713 - EQ - Department of Chemical Engineering.		
Degree:	BACHELOR'S DEGREE IN	INDUSTRIAL TECHNOLOGY ENGINEERING (Syllabus 2010). (Optional subject).	
Academic year: 2024	ECTS Credits: 6.0	Languages: Catalan, Spanish	

LECTURER

Coordinating lecturer:	Jose Ignacio Iribarren Laco
Others:	Jose Ignacio Iribarren Laco

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Specific:

CE4. Capacity to understand and apply basic knowledge principles of general chemistry, organic and inorganic chemistry and their engineering applications.

TEACHING METHODOLOGY

Learning based in expositive lessons by using the resources available in Atenea campus and cooperative learning in practice sessions oriented to exercices resolution.

LEARNING OBJECTIVES OF THE SUBJECT

STUDY LOAD

Туре	Hours	Percentage
Hours large group	60,0	40.00
Self study	90,0	60.00

Total learning time: 150 h

CONTENTS

Introduction. Chemical industry characteristics.

Description:

General characteristics of chemical industry. Equipment and general installations. Associated problematic to the chemical plant.

Specific objectives:

Knowledge of the general characteristics of a chemical industry.

Full-or-part-time: 3h Theory classes: 2h Self study : 1h

Thermodynamic basis of the corrosion.

Description:

Electrochemical cells. Nernst equation. Galvanic, concentration and differential aeration cells. Pourbaix diagrams and applications.

Specific objectives:

To obtain the thermodynamic basis of corrosion and apply the Pourbaix diagrams to predict the possibility of corrosion.

Related activities: Exercices session.

Full-or-part-time: 8h

Theory classes: 4h Practical classes: 2h Self study : 2h

Corrosion kinetics.

Description:

Polarization. Evans diagramams and Tafel equations. Passivity. Flade potential.

Specific objectives:

To obtain the kinetics implications in corrosion processes and apply to different factors afectting to corrosion rate.

Related activities: Exercise session.

Full-or-part-time: 7h Theory classes: 3h

Practical classes: 2h Self study : 2h

Types of corrosion. Protection against corrosion.

Description:

Environmental, water, soils and microbiological corrosion. Galvanic, homogeneous and located (pitting) corrosion. Stress corrosion cracking. Cathodic protection, metallic and plastic coatings. Applications to Chemical Industry.

Specific objectives:

To distinguish the differents types of corrosion related with the morphology and properties of metals and alloys.

Related activities:

Exercice session. Team work and visit to Galvanizados Tenas.

Full-or-part-time: 6h Theory classes: 2h Practical classes: 2h Self study : 2h

Materials properties.

Description:

Metals and alloys. Mechanical and thermal properties. Carbon steels and stainless steels. Non ferrous metals. Specaial alloys. Plastics materials. Reinforced plastics.

Specific objectives:

To study the main properties of materials which can be used in chemical industry.

Related activities: Exercice session.

Full-or-part-time: 6h Theory classes: 2h Practical classes: 2h Self study : 2h

Materials selection.

Description:

Materials selection criteria. Application to apparatus and equipment of chemical industry.

Specific objectives:

To establish the basis of materials selection criteria in chemical industry.

Related activities: Exercise session.

Full-or-part-time: 6h

Theory classes: 2h Practical classes: 2h Self study : 2h

Costing and project evaluation.

Description:

Investment analysis. Economic evaluation of projects. Total investment cost. Net present worth. Pay back time. Rate of return. Factorial methods of cost estimation applied to chemical equipment.

Specific objectives:

To study preliminarily the investment analysis and associated costing in chemical industry.

Related activities: Exercise session.

Full-or-part-time: 6h Theory classes: 2h Practical classes: 2h Self study : 2h

Mechanical dessign.

Description:

Pressure vessels under internal and external pressure. Dessign parameters.. Cylinders and spherical shells. Head and closure dessign. Liquid storage tanks. Piping and instrumentation.

Specific objectives:

To study the basis of mechanical dessign of vessels under pressure and storage tanks.

Related activities: Exercise session.

Full-or-part-time: 6h

Theory classes: 2h Practical classes: 2h Self study : 2h

GRADING SYSTEM

Evaluation system includes:

a) Exercices resolution in continous evaluation (25% of final qualification)

b) Complementary activities like to seminars, expositions and guided works (25% of final qualification).

c) Two examinations (50% of final qualification).

Reevaluation will replace the qualification of final examen, remaining unchanged the continous evaluation.

During the periode of spring of the course 2019-2020, and as a consequence of the health crisis due to the Covid19, the qualification methodology will be:

-Continuous evaluation based on deliveries of exercices of the first part of the subject, being the weight a 65% in the final qualification.

-Continuous evaluation based on deliveries of exercices of the second part of the subject, being the weight a 35% in the final qualification.

EXAMINATION RULES.

Additional material is allowed in examination in accordance with the criteria of the professor.
