

Course guide

295025 - SE - Selection and Ecodesign

Last modified: 08/08/2024

Unit in charge: Barcelona East School of Engineering
Teaching unit: 702 - CEM - Department of Materials Science and Engineering.
Degree: BACHELOR'S DEGREE IN MATERIALS ENGINEERING (Syllabus 2010). (Compulsory subject).
Academic year: 2024 **ECTS Credits:** 6.0 **Languages:** English

LECTURER

Coordinating lecturer: JOSE ANTONIO BENITO PARAMO

Others: Primer quadrimestre:
JOSE ANTONIO BENITO PARAMO - Grup: M1

PRIOR SKILLS

Knowledge of the main characteristics of the different materials families, as well as their classification. Knowledge of the main mechanical properties, thermal properties, etc... important in mechanical design.

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Specific:

CEI-16. Understand the basic applications of environmental technologies and sustainability principles.

CEMT-22. Knowledge and application of materials technology in the production, transformation, processing, selection, control, maintenance, recycling and storage of all types of materials.

Transversal:

02 SCS N1. SUSTAINABILITY AND SOCIAL COMMITMENT - Level 1. Analyzing the world's situation critically and systemically, while taking an interdisciplinary approach to sustainability and adhering to the principles of sustainable human development. Recognizing the social and environmental implications of a particular professional activity.

TEACHING METHODOLOGY

The course will be based on lectures, resolution of problems and sessions in the computer room to work with the software CES EduPack

LEARNING OBJECTIVES OF THE SUBJECT

The student will learn how to translate the constraints of an engineering component to mathematical relationships of the properties (mechanical, thermal, optical, etc...) of the material. Moreover, the student will get familiar with the Ashby methodology for materials selection and the use of the program CES EduPack. Ecodesign criteria will be introduced.

STUDY LOAD

Type	Hours	Percentage
Hours large group	45,0	30.00
Hours small group	15,0	10.00
Self study	90,0	60.00

Total learning time: 150 h

CONTENTS

Introduction

Description:

In the introductory session the importance of materials in the design processes will be explained and some examples of the influence of materials developments on the progress of society will be analyzed.

Full-or-part-time: 1h 30m

Theory classes: 1h 30m

The design process

Description:

The design process. Types of design. Design tools and materials data. Case study.

Full-or-part-time: 2h

Theory classes: 1h

Self study : 1h

Engineering materials and their properties

Description:

The classification of the materials will be reviewed and related to the classification applied in the software CES EduPack, with special attention to the differences between materials of different families or within a specific family. The important properties (mechanical, thermal, electrical, optical and durability) which appear in the datasheet of each material in the Level 2 of CES EduPack will also be checked.

Full-or-part-time: 4h 30m

Theory classes: 3h

Practical classes: 1h 30m

Materials properties charts

Description:

Materials properties charts. Exploring the relationship between different properties.

Full-or-part-time: 12h 30m

Theory classes: 1h 30m

Practical classes: 1h 30m

Laboratory classes: 2h

Self study : 7h 30m

Materials Selection

Description:

Definition of the problem. Selection process. Material indices. Attribute limits.

Full-or-part-time: 41h 30m

Theory classes: 6h

Practical classes: 4h 30m

Laboratory classes: 6h

Self study : 25h

Shape factor

Description:

Efficient shapes. Introducing the concept of efficient shapes in the materials selection process. Examples.

Full-or-part-time: 13h 30m

Theory classes: 1h 30m

Practical classes: 2h

Laboratory classes: 2h

Self study : 8h

Ecodessing

Description:

Life cycle assessment and EcoAudit. Eco-informed materials selection. Examples.

Full-or-part-time: 29h

Theory classes: 6h

Practical classes: 3h

Laboratory classes: 4h

Self study : 16h

Monographic work

Description:

The students will have to select an engineering component and propose the best materials for the given application, following the methodology explained during the course.

Full-or-part-time: 31h

Practical classes: 11h

Self study : 20h

GRADING SYSTEM

30% final exam + 30% midterm exam + 20 % Practical Work + 20% Monographic work

THERE IS NOT A RE-EVALUATION EXAM
