

## Course guide

### 320008 - MM3 - Mathematical Methods III

**Last modified:** 02/04/2024

**Unit in charge:** Terrassa School of Industrial, Aerospace and Audiovisual Engineering  
**Teaching unit:** 749 - MAT - Department of Mathematics.

**Degree:** BACHELOR'S DEGREE IN CHEMICAL ENGINEERING (Syllabus 2009). (Compulsory subject).  
BACHELOR'S DEGREE IN ELECTRICAL ENGINEERING (Syllabus 2009). (Compulsory subject).  
BACHELOR'S DEGREE IN INDUSTRIAL ELECTRONICS AND AUTOMATIC CONTROL ENGINEERING (Syllabus 2009). (Compulsory subject).  
BACHELOR'S DEGREE IN MECHANICAL ENGINEERING (Syllabus 2009). (Compulsory subject).  
BACHELOR'S DEGREE IN TEXTILE TECHNOLOGY AND DESIGN ENGINEERING (Syllabus 2009). (Compulsory subject).

**Academic year:** 2024    **ECTS Credits:** 6.0    **Languages:** Catalan, Spanish

#### LECTURER

---

**Coordinating lecturer:** JORDI SALUDES CLOSA

**Others:** ENRIC MONSÓ  
JULIAN PFEIFFLE  
VÍCTOR MAÑOSA

#### PRIOR SKILLS

---

As a general rule, students will be expected to have passed Mathematics in the first year to be able to take this subject. Specifically, a basic knowledge of integral calculus is considered essential.

#### DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

---

**Specific:**

CE01-INDUS. Ability to solve mathematical problems that may arise in engineering. Aptitude to apply knowledge of linear algebra; geometry; differential geometry; differential and integral calculus; differential and partial differential equations; numerical methods; numerical algorithms; statistics and optimization. (Basic training module)

**General:**

CG03-INDUS. Knowledge in basic and technological subjects that enable them to learn new methods and theories and provide them with versatility to adapt to new situations.

## TEACHING METHODOLOGY

---

- Face-to-face lecture sessions.
- Face-to-face practical work sessions.
- Independent learning and exercises.
- Preparation and completion of individual and/or group activities subject to assessment.

In the face-to-face lecture sessions, the lecturer will introduce the basic theory, concepts, methods and results for the subject and use examples to facilitate students' understanding.

Students will be expected to study in their own time so that they are familiar with concepts and are able to solve the exercises set, either manually or with the help of a computer.

The use of IT support tools will be encouraged: students will learn how to use a mathematical software package as a tool for performing numerical, symbolic and graphic calculations.

## LEARNING OBJECTIVES OF THE SUBJECT

---

Familiarise students with the techniques inherent to Fourier Analysis and with the interpretation of signals in the frequency range. Familiarise students with some of the techniques used in Differential Equations. They will be expected to use the deterministic modelling tool and interpret its answers.

Teach students how to apply these techniques properly for solving common practical problems encountered by engineers.

Use it software tools for approaching and solving problems. Develop the specific and transversal competencies associated with the academic work.

## STUDY LOAD

---

Type	Hours	Percentage
Self study	90,0	60.00
Hours medium group	30,0	20.00
Hours large group	30,0	20.00

**Total learning time:** 150 h

## CONTENTS

### TOPIC 1: FOURIER SERIES

**Description:**

- 1.1. Numerical series. Sequences and function series.
- 1.2. Fourier series.
- 1.3. Signal reconstruction. Spectrum.
- 1.4. Dirichlet's theorem. Uniform and pointwise convergence. Gibbs phenomenon.
- 1.5. Complex expression. Parseval's identity.

**Specific objectives:**

For students to:

- Understand the concept of convergence of a numerical series, a sequence of functions and a series of functions.
- Understand the concept of Fourier series representation of a periodic signal and calculate it in real and exponential form.
- Understand the concepts of pointwise convergence vs. uniform convergence, Dirichlet's theorem and Gibbs phenomenon.
- Understand the concepts of spectrum and average signal strength.
- Understand and apply Parseval's theorem.
- Be able to calculate Fourier series and obtain the graphs of the partial sums and the spectra with the help of symbolic computation software.

**Full-or-part-time:** 45h

Theory classes: 9h

Practical classes: 9h

Self study : 27h

### TOPIC 2: FOURIER TRANSFORM

**Description:**

- 2.1. Deduction and spectrum. Parseval's identity.
- 2.2. Properties of Fourier transform.
- 2.3. Frequency description of LTI systems and filters

**Specific objectives:**

For students to:

- Understand the Fourier transform concept of a non-periodic signal and know how to calculate it.
- Understand the concepts of spectral energy density and Parseval's theorem.
- Understand the main properties of the Fourier transform: linearity, shifts, time scales and convolution.
- Understand the frequency description of LTI systems, in particular for describing filters.
- Calculate Fourier transforms and inverse Fourier transforms and use symbolic computation software to produce graphs of the corresponding spectra.

**Full-or-part-time:** 37h

Theory classes: 7h 30m

Practical classes: 7h 30m

Self study : 22h

### TOPIC 3: ORDINARY DIFFERENTIAL EQUATIONS

**Description:**

- 3.1. General introduction to Ordinary Differential Equations (ODEs).
- 3.2. First-order linear ODEs.
- 3.3. Linear ODEs with constant coefficients.
- 3.4. Interpretation of results.

**Specific objectives:**

For students to:

- Understand the concept of ordinary differential equation and its solution. Understand the conditions for the existence and uniqueness of a solution to an initial value problem.
- Understand the concept of ODE problem modelling.
- Understand the techniques for the integration of simple ODEs, first-order linear ODEs (in particular the method of variation of parameters), and ODEs with constant coefficients.
- Use a linear ODE with constant coefficients to model the time description of an LTI system.
- Understand the concepts of resonance and stability.
- Solve ODEs and use symbolic computation software to obtain the corresponding graphs.

**Full-or-part-time:** 44h

Theory classes: 8h 30m

Practical classes: 8h 30m

Self study : 27h

### TOPIC 4: LAPLACE TRANSFORM

**Description:**

- 4.1. Definition of the Laplace Transform (LT).
- 4.2. Derivative theorem. Initial value problems.
- 4.3. Properties of LT.
- 4.4. The inverse LT.

**Full-or-part-time:** 24h

Theory classes: 5h

Practical classes: 5h

Self study : 14h

## ACTIVITIES

### WRITTEN TESTS

**Description:**

Face-to-face individual events in the timetable set by the School.

**Specific objectives:**

The student must have successfully achieved the objectives outlined in the contents that have been part of the corresponding test.

**Related competencies :**

CE01-INDUS. Ability to solve mathematical problems that may arise in engineering. Aptitude to apply knowledge of linear algebra; geometry; differential geometry; differential and integral calculus; differential and partial differential equations; numerical methods; numerical algorithms; statistics and optimization. (Basic training module)

**Full-or-part-time:** 4h

Self study: 4h

## OTHER ACTIVITIES

### Description:

Tasks related to the subject contents.

### Specific objectives:

The student must have successfully achieved the objectives outlined in the contents that have been part of the corresponding task.

### Related competencies :

CE01-INDUS. Ability to solve mathematical problems that may arise in engineering. Aptitude to apply knowledge of linear algebra; geometry; differential geometry; differential and integral calculus; differential and partial differential equations; numerical methods; numerical algorithms; statistics and optimization. (Basic training module)

### Full-or-part-time: 10h

Self study: 10h

## GRADING SYSTEM

It is evaluated by partial assessments with the following weights:

- 1st exam: 45%
- 2nd exam: 45%
- Tasks: 10%

The note of the 1st exam may be renewed with a second change examination, which will be done on the same date as the day set for the 2nd exam. Any matriculated student may be submitted. The final qualification of the 1st exam will be the highest mark between the 1st exam and the mark of the second change examination.

For those students who meet the requirements and submit to the re-evaluation examination, the grade of the re-evaluation exam will replace the grades of all the evaluation acts during the course.

If the final grade after re-evaluation is lower than 5, it will replace the initial one only if it is higher. If the final grade after re-evaluation is greater or equal to 5, the final grade of the subject will be pass 5.0.

To access the re-evaluation, students must have a final grade higher or equal to 2.0 but lower than 5.0 during the teaching period.

## EXAMINATION RULES.

The assessment consists of the following acts of classroom assessment and/or other activities assessed as part of continuous assessment. If not done any of the events or activities will be considered qualified to zero.
