

Course guide 320168 - CCME - Calculation and Construction of Electrical Machines

Unit in charge: Teaching unit:	Last modified: 02/04/20 Terrassa School of Industrial, Aerospace and Audiovisual Engineering 709 - DEE - Department of Electrical Engineering.	24
Degree:	BACHELOR'S DEGREE IN ELECTRICAL ENGINEERING (Syllabus 2009). (Optional subject).	
Academic year: 2024	ECTS Credits: 6.0 Languages: Catalan, Spanish	

LECTURER

Coordinating lecturer:	José Ignacio Candela García
Others:	José Ignacio Candela García y Joan Montaña Puig

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Specific:

CE19. ELE: Ability to calculate and design electrical machines.

Transversal:

1. SELF-DIRECTED LEARNING - Level 2: Completing set tasks based on the guidelines set by lecturers. Devoting the time needed to complete each task, including personal contributions and expanding on the recommended information sources.

2. EFFICIENT ORAL AND WRITTEN COMMUNICATION - Level 2. Using strategies for preparing and giving oral presentations. Writing texts and documents whose content is coherent, well structured and free of spelling and grammatical errors.

3. ENTREPRENEURSHIP AND INNOVATION - Level 2. Taking initiatives that give rise to opportunities and to new products and solutions, doing so with a vision of process implementation and market understanding, and involving others in projects that have to be carried out.

4. TEAMWORK - Level 2. Contributing to the consolidation of a team by planning targets and working efficiently to favor communication, task assignment and cohesion.

5. EFFECTIVE USE OF INFORMATION RESOURCES - Level 2. Designing and executing a good strategy for advanced searches using specialized information resources, once the various parts of an academic document have been identified and bibliographical references provided. Choosing suitable information based on its relevance and quality.

TEACHING METHODOLOGY

- Face sessions exhibition content.

- Classroom work sessions in the classroom.
- Face sessions of laboratory work.
- Self study and exercises.

A presentation of content sessions the teacher will introduce the theoretical foundations of the subject, concepts, methods and results and illustrate them with examples appropriate to facilitate understanding.

Students will have all the documentation to the Digital Campus of the subject: theoretical presentations, solved exercises, scripts and proposals for supervised practice.

Students, individually, will have to study to assimilate concepts and solve exercises.

LEARNING OBJECTIVES OF THE SUBJECT

Give students an overview of the design of electrical machines (transformers, generators and motors).

To know the general rules and methods of dimensioning of electric machines. Understand the limitations of used materials (magnetic, conductors, insulation and thermal) in order to obtain an optimized design with engineering criteria.

Special emphasis is placed on design methods that rely on the use of finite element programs.

STUDY LOAD

Туре	Hours	Percentage
Hours large group	30,0	20.00
Self study	90,0	60.00
Hours medium group	15,0	10.00
Hours small group	15,0	10.00

Total learning time: 150 h

CONTENTS

TEMA 1. Introduction

Description:

Description of the topology of the different types of electrical machines. Laws and methods in the design of electrical machines. The circuits of electric machines.

Full-or-part-time: 10h Theory classes: 2h Practical classes: 2h Self study : 6h

TEMA 2. Introduction to Finite Element Calculation

Description:

Introduction to Finite Element Calculation Using the FEMM program

Full-or-part-time: 20h Theory classes: 4h Practical classes: 2h Laboratory classes: 2h Self study : 12h

TEMA 3. The magnetic circuit

Description:

Introduction to the magnetic circuit. Magnitudes and units. Standard magnetic materials. B-H curves. Loss of iron. Equation of the magnetic circuit. Magnetomotive force to be generated. Electromotive forces of the different machines. Air gap. Polos. Teeth Permanent magnets.

Full-or-part-time: 10h

Theory classes: 2h Practical classes: 2h Self study : 6h

TEMA 4. The electric circuit

Description:

Introduction to the electrical circuit. Magnitudes and units. Commercial electrical materials. Influence of temperature. Losses.

Types of windings. Winding factors.

Full-or-part-time: 10h Theory classes: 2h Laboratory classes: 2h Self study : 6h

TEMA 5. The dielectric circuit

Description:

Introduction to circuit dielectric. Dielectric rigidity. Dielectric constant. Materiales Aislantes malls. Dielectric losses. Concepts of tangent losses. Insulation in electric machines. Insulation sizing. Insulation in layers.

Full-or-part-time: 10h Theory classes: 2h Practical classes: 2h Self study : 6h

TEMA 6. The Thermal circuit

Description:

Introduction to the thermal circuit. Thermal characteristics of materials. Forms of heat transmission: conduction, convection and radiation.

Generation and evacuation of losses. Thermal resistance. Equivalent thermal circuits. Heating curves. Refrigeration and ventilation systems.

Full-or-part-time: 10h

Theory classes: 2h Laboratory classes: 2h Self study : 6h

TEMA 7. Direct current electrical machines

Description:

Constructive forms. Magnetic field in the air gap. Polos. Windings. Losses. Parameters Determination, torque, speed, power.

Full-or-part-time: 20h

Theory classes: 4h Practical classes: 2h Laboratory classes: 2h Self study : 12h

TEMA 8. Transformer

Description:

Constructive shapes. Windings. Losses. Determination of parameters, voltages, currents and powers.

Full-or-part-time: 10h Theory classes: 2h Practical classes: 2h Self study : 6h

TEMA 9. Synchronous machines

Description:

Constructive shapes. Magnetic field in the air gap. Poles. Coils. Losses. Determination of parameters, torque, speed, power.

Full-or-part-time: 10h Theory classes: 2h Laboratory classes: 2h Self study : 6h

TEMA 10. Asynchronous machines

Description:

Constructive shapes. Magnetic field in the air gap. Poles. Coils. Losses. Determination of parameters, torque, speed, power.

Full-or-part-time: 10h

Theory classes: 2h Guided activities: 2h Self study : 6h

TEMA 11. Permanent magnet machines

Description:

Constructive shapes. Magnetic field in the air gap. Poles. Coils. Losses. Determination of parameters, torque, speed, power.

Full-or-part-time: 10h Theory classes: 2h Laboratory classes: 2h Self study : 6h

TEMA 12. Variable reluctance machines

Description: Constructive shapes. Magnetic field in the air gap. Poles. Coils. Losses. Determination of parameters, torque, speed, power.

Full-or-part-time: 10h Theory classes: 2h Practical classes: 2h Self study : 6h

GRADING SYSTEM

- First exam: 30%
- Segundo exam: 30%
- Laboratory: 25%
- Problems y activities: up to 75%

EXAMINATION RULES.

The practices are face-to-face and compulsory.

The subject can be approved as a continuous evaluation only with the practices, problems and activities.

You can approve or supplement the note with the two official exams, up to a maximum grade of 10.

The examination can take all the bibliographic information that is considered appropriate.
