

Course guide 820122 - CEEREE - Power Plants and Renewable Energies

Last modified: 08/08/2024

Unit in charge: Teaching unit:	Barcelona East School of Engineering 709 - DEE - Department of Electrical Engineering.		
Degree:	BACHELOR'S DEGREE IN ELECTRICAL ENGINEERING (Syllabus 2009). (Compulsory subject).		
Academic year: 2024	ECTS Credits: 6.0 Languages: Catalan, Spanish		
LECTURER			
Coordinating lecturer:	JORGE DE LA HOZ CASAS		
Others:	Primer quadrimestre: JOSE MATAS ALCALA - Grup: T11, Grup: T12		

REQUIREMENTS

MÀQUINES ELÈCTRIQUES I - Prerequisit

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Specific:

2. Design power stations.

5. Understand the applications of renewable energies.

Transversal:

3. TEAMWORK - Level 3. Managing and making work groups effective. Resolving possible conflicts, valuing working with others, assessing the effectiveness of a team and presenting the final results.

TEACHING METHODOLOGY

The teaching methodology used is a mixed methodology based on the application of PBL methodology together with a theoretical introduction. This structure allows students contextualizing the work to be developed.

LEARNING OBJECTIVES OF THE SUBJECT

The aim of the course is to provide the basic knowledge regarding the power generation activity in the Spanish electricity sector.

STUDY LOAD

Туре	Hours	Percentage
Hours small group	15,0	10.00
Hours large group	45,0	30.00
Self study	90,0	60.00

Total learning time: 150 h

CONTENTS

(ENG) Introduction to the electricity production activity

Description:

*

Specific objectives:

The European framework The main figures of the electricity generation in Spain The Spanish framework. The evolution of energy prices and their implications

Full-or-part-time: 7h 30m Theory classes: 3h 30m

Self study : 4h

(ENG) Electricity production. Technical aspects

Description:

- *
- *

Specific objectives:

Types and classification of power plants in the Ordinary Regime Types and classification of power plants in the Special Regime Operating principles Control and regulation

Full-or-part-time: 7h 30m Theory classes: 3h 30m

Self study : 4h

(ENG) Management and control of power plants.

Description:

*

Specific objectives:

The electricity market and the management of power plants Simplified models for the management and control of power plants Conception and design of the control mechanisms associated to the power plants management Introduction to renewable power plants control

Full-or-part-time: 40h Theory classes: 10h Laboratory classes: 15h Self study : 15h

(ENG) Introduction to the feasibility study of a renewable power plant

Description:

*

Specific objectives:

Market study and implementation

Technical feasibility study of the various options identified by means of the market study and implementation Economic feasibility study of the various options identified by means of the market study and implementation Evaluation of the projects. Selection and justification of the proposed solution

Full-or-part-time: 95h Theory classes: 28h Self study : 67h

GRADING SYSTEM

The evaluation will be conducted by carrying out different projects (and / or tests) related to the contents of the subject. These projects (or tests) include the activity carried out in the laboratory. Within these associated activities one can find the generic skill that will have a weight of 10% from the total grade. The subject does not possess a reassessment process.
