

Guia docent

240209 - 240EN36 - Ciència de Dades Aplicada als Sistemes Elèctrics

Última modificació: 13/03/2025

Unitat responsable: Escola Tècnica Superior d'Enginyeria Industrial de Barcelona

Unitat que imparteix: 709 - DEE - Departament d'Enginyeria Elèctrica.

Titulació: MÀSTER UNIVERSITARI EN ENGINYERIA DE L'ENERGIA (Pla 2013). (Assignatura optativa).
MÀSTER UNIVERSITARI EN SISTEMES I ACCIONAMENTS ELÈCTRICS (Pla 2021). (Assignatura optativa).
MÀSTER UNIVERSITARI EN ENGINYERIA DE L'ENERGIA (Pla 2022). (Assignatura optativa).

Curs: 2025

Crèdits ECTS: 5.0

Idiomes: Anglès

PROFESSORAT

Professorat responsable: MÒNICA ARAGÜÉS PEÑALBA

Altres: MÒNICA ARAGÜÉS PEÑALBA

CAPACITATS PRÈVIES

Programming
Statistics
Electrotechniques

METODOLOGIES DOCENTS

Teaching methodology:

The course teaching methodologies are as follows:

- Lectures and conferences: presentation of knowledge by lecturers or guest speakers.
- Participatory sessions: collective resolution of exercises, debates and group dynamics, with the lecturer and other students in the classroom; classroom presentation of an activity individually or in small groups.
- Theoretical/practical supervised work (TD): classroom activity carried out individually or in small groups, with the advice and supervision of the teacher.
- Homework assignment of reduced extension: carry out homework of reduced extension, individually or in groups.
- Homework assignment of broad extension: design, planning and implementation of a project or homework of broad extension by a group of students, and writing a report that should include the approach, results and conclusions.
- Evaluation activities (EV).

Training activities:

The course training activities are as follows:

- Face to face activities
 - o Lectures and conferences: learning based on understanding and synthesizing the knowledge presented by the teacher or by invited speakers.
 - o Participatory sessions: learning based on participating in the collective resolution of exercises, as well as in discussions and group dynamics, with the lecturer and other students in the classroom.
 - o Presentations (PS): learning based on presenting in the classroom an activity individually or in small groups.
 - o Theoretical/practical supervised work (TD): learning based on performing an activity in the classroom, or a theoretical or practical exercise, individually or in small groups, with the advice of the teacher.
- Study activities
 - o Homework assignment of reduced extension (PR): learning based on applying knowledge and presenting results.
 - o Homework assignment of broad extension (PA): learning based on applying and extending knowledge.
 - o Self-study (EA): learning based on studying or expanding the contents of the learning material, individually or in groups, understanding, assimilating, analysing and synthesizing knowledge.

OBJECTIUS D'APRENENTATGE DE L'ASSIGNATURA

- 1) Understand the main concepts around Big Data and Machine Learning
- 2) Understand the potential applications of Machine Learning in the electrical energy sector
- 3) Learn how to develop a Machine Learning model
- 4) Explore the main Machine Learning types (Supervised and Unsupervised)
- 5) Get used to Python coding for Machine Learning applications
- 6) Develop Machine Learning models for electrical energy problems

HORES TOTS DE DEDICACIÓ DE L'ESTUDIANTAT

Tipus	Hores	Percentatge
Hores aprenentatge autònom	80,0	64.00
Hores grup gran	30,0	24.00
Hores grup petit	15,0	12.00

Dedicació total: 125 h

CONTINGUTS

títol català

Descripció:

This course explains data science for power system applications

Objectius específics:

- Introduction to Big Data and Machine learning applications to the electrical energy sector. -
- Creation of a Machine Learning Model: Introduction to Python
- Descriptive statistics
- Supervised learning I: classification
- Supervised learning II: regression
- Unsupervised learning: clustering and dimensionality reduction
- Electric power system applications

Dedicació: 125h

Grup gran/Teoria: 30h

Activitats dirigides: 15h

Aprenentatge autònom: 80h

SISTEMA DE QUALIFICACIÓ

In order to be able to have an evaluation of the subject, it is a necessary condition to have attended, carried out and delivered the reports of all the laboratory assignments and final project. In case this necessary condition is not met, the grade will be NP (Not Presented). If the necessary condition is met, then the calculation will be as follows:

70 % Exam_mark

30 % Lab_reports_mark

There is no re-take exam.
