

## Guia docent

# 300089 - ASM\_MUEA - Gestió de la Seguretat a l'Aviació

Última modificació: 17/01/2024

**Unitat responsable:** Escola d'Enginyeria de Telecomunicació i Aeroespacial de Castelldefels

**Unitat que imparteix:** 748 - FIS - Departament de Física.

**Titulació:** MÀSTER UNIVERSITARI EN ENGINYERIA AERONÀUTICA (Pla 2014). (Assignatura optativa).

**Curs:** 2023

**Crèdits ECTS:** 5.0

**Idiomes:** Anglès

## PROFESSORAT

**Professorat responsable:** Jovana Kuljanin

**Altres:** Raúl Sáez García

## CAPACITATS PRÈVIES

Previous concepts include knowledge of air traffic management, given in any bachelor's degree in aerospace engineering and reviewed in previous subjects of this Master's degree, as well as familiarity with the use of computing tools for engineering. Familiarity with Python and/or Matlab is required.

## REQUISITS

Concepts seen in 220309 - Transport Aeri i Sistemes de Navegació  
([https://www.upc.edu/estudispdf/guia\\_docent.php?codi=220309&idioma=en](https://www.upc.edu/estudispdf/guia_docent.php?codi=220309&idioma=en))

## METODOLOGIES DOCENTS

The course combines the following teaching methodologies:

- Theory classes.
- Autonomous learning: students will study using self-learning material.
- Cooperative learning: students will form small group (2-4 people) to fulfill some of the activities of the course.
- Project based learning: students will build a small team project (3-4 people).

Directed learning hours will consist in exercises and practical examples, after the theory classes in which the professor exposes the content of the subject. With the directed learning hours, the students will be motivated to participate actively in their education and to complete the knowledge acquired during theory classes, usually with the help of computers.

## OBJECTIUS D'APRENENTATGE DE L'ASSIGNATURA

This course addresses the main methodologies for safety assessment in aviation. Different methods for hazard identification and risk assessments of strategies will be examined with special emphasis on the safety assessment of the system as a whole. A broad range of accident modelling approaches will be presented, with special focus on novel approaches recently emerged in aviation safety field.

At the end of the course, the student will be able to:

- . understand the general concept of safety in the aviation;
- . understand different types of safety reports and metrics;
- . perform safety assessment in the case of implementation of new systems and/or modification of current ones;
- . model and validate accidents/incidents applying different approaches;

## HORES TOTALS DE DEDICACIÓ DE L'ESTUDIANTAT

Tipus	Hores	Percentatge
Hores aprenentatge autònom	80,0	64.00
Hores grup gran	45,0	36.00

**Dedicació total:** 125 h

## CONTINGUTS

### Introduction to Safety

#### Descripció:

- Definition and Basic concepts of Risk and Safety.
- Safety records and Safety metrics (accident statistics, accident causal factors, real-life examples)
- Sources of Accident/Incident Information (notification, investigation, reporting)
- Just Culture concept (Evaluating the benefits of punishment versus learning)

#### Dedicació: 14h

Grup gran/Teoria: 6h

Grup petit/Laboratori: 2h

Aprendentatge autònom: 6h

### Safety threats and management

#### Descripció:

Overview, description and literature review on:

- Human factor, error and performance
- Airport safety issues (runway excursion, loss of separation, controlled flight into terrain)
- Safety management concepts
- Safety assessment methodology (TOPAZ and SAM)

#### Dedicació: 25h

Grup gran/Teoria: 6h

Grup petit/Laboratori: 3h

Aprendentatge autònom: 16h

### Methods for Safety assessment

#### Descripció:

Overview, description and literature review on:

- Causal methods/models
- Human Error Models (HESRA, HERA, TRACER-lite, etc.)
- Accident modelling approaches (Technical, Human Factors, Organizational, Systemic)
- Conflict detection and resolution methods

#### Dedicació: 34h

Grup gran/Teoria: 10h

Grup petit/Laboratori: 4h

Aprendentatge autònom: 20h

### Project I: Accident modelling by novel methodologies

#### Descripció:

Having a detailed insight into a large set of potential methods/models, the students will develop an systemic accident models in order to find the cause of aircraft accident/incident. The models will be applied on a case of mid-air collision of two planes. A report will be delivered and a presentation summarizing the achievement will be given in front of the rest of students.

#### Dedicació: 52h

Grup gran/Teoria: 3h

Activitats dirigides: 11h

Aprendentatge autònom: 38h

## SISTEMA DE QUALIFICACIÓ

Participation in class and exercises: 10%

Individual exams and tests: 35%

Projects and presentations: 55%
