

Course guide

230653 - EIO - Electronic Instrumentation and Optoelectronics

Last modified: 11/07/2023

Unit in charge: Barcelona School of Telecommunications Engineering
Teaching unit: 710 - EEL - Department of Electronic Engineering.

Degree: MASTER'S DEGREE IN TELECOMMUNICATIONS ENGINEERING (Syllabus 2013). (Compulsory subject).
MASTER'S DEGREE IN ADVANCED TELECOMMUNICATION TECHNOLOGIES (Syllabus 2019). (Optional subject).

Academic year: 2023 **ECTS Credits:** 5.0 **Languages:** English

LECTURER

Coordinating lecturer: Consultar aquí / See here:
<https://telecos.upc.edu/ca/estudis/curs-actual/professorat-responsables-coordinadors/responsables-signatura>

Others: Consultar aquí / See here:
<https://telecos.upc.edu/ca/estudis/curs-actual/professorat-responsables-coordinadors/professorat-assignat-idioma>

PRIOR SKILLS

Basic analog and digital electronics. Fundamentals of Physics and mathematics, differential equations

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Specific:

1. Ability to apply advanced knowledge in photonics, optoelectronics and high-frequency electronic
2. Ability to develop electronic instrumentation, as well as transducers, actuators and sensors.

Transversal:

3. EFFECTIVE USE OF INFORMATION RESOURCES: Managing the acquisition, structuring, analysis and display of data and information in the chosen area of specialisation and critically assessing the results obtained.
4. FOREIGN LANGUAGE: Achieving a level of spoken and written proficiency in a foreign language, preferably English, that meets the needs of the profession and the labour market.

TEACHING METHODOLOGY

- Lectures
- Application classes
- Theory classes
- Laboratory classes
- Exercises
- Tests

LEARNING OBJECTIVES OF THE SUBJECT

Learning objectives of the subject:

The aim of the Electronic Instrumentation part is to understand the principles of measurement theory to specify and use electronic instruments and measuring systems. There will be considered also technical and regulatory standards. Moreover, it will be described and analyzed the different types of sensors for measuring physical quantities related to Information Communication Technologies. The signal conditioning circuits for the sensors will be mounted and test in the laboratory classes. Finally the characteristics of data acquisition systems to register the signals obtained from the sensors will be studied and applied to laboratory classes.

The aim of the Optoelectronics subject is to know optoelectronic devices from a semiconductor point of view. Each device is described in its basic form, and then various improvements and drive circuitry are indicated. First objective is to understand basic semiconductor physics and metal-semiconductor and PN junction performance. Next aims are know the light emission process in LEDs and LASERs devices and their operating parameters, and to understand basic performance of light sensor/receivers as Photoconductors, Solar Cells, Photodiodes and Charge Coupled Devices. Finally other optoelectronics and high frequency devices are also briefly studied and fabrication technology is showed visiting UPC laboratories.

Learning results of the subject:

- Ability to specify, design and use electronic instrumentation and measurement systems.
- Ability to understand the sensors characteristics and its applications
- Ability to design signal conditioning circuits and actuators
- Ability to understand and to explain as semiconductor devices are able to convert electrical current in light and light in electrical current.
- Ability to relate, to quantify, and to characterize the light and the electrical current produced in optoelectronic semiconductor devices.
- Ability to understand materials and geometries used in the construction of optoelectronic devices.
- Ability to analyse and to compare optoelectronic devices from their operating parameters
- Ability to analyse basic operation circuits for optoelectronic devices.

STUDY LOAD

Type	Hours	Percentage
Hours large group	26,0	20.80
Hours small group	13,0	10.40
Self study	86,0	68.80

Total learning time: 125 h

CONTENTS

1. Introduction to measurement theory

Description:

- Instrumentation system topology
- Basic terminology
- Sources of uncertainty and categories
- Uncertainty evaluation and management in measurements

Full-or-part-time: 9h

Theory classes: 2h

Self study : 7h

2. Basic instruments

Description:

- Measurement of electrical magnitudes
- Time and frequency estimators
- Measurement instruments basics
- Programmable instrumentation system

Full-or-part-time: 11h

Theory classes: 2h

Laboratory classes: 4h

Self study : 5h

3. Sensor technologies

Description:

- Modulating sensors
- Generating sensors

Full-or-part-time: 8h

Theory classes: 1h

Laboratory classes: 2h

Self study : 5h

4. Signal conditioning circuits

Description:

- Signal conditioning circuits for modulating sensors (DC & AC)
- Signal conditioning circuits for generating sensors

Full-or-part-time: 11h

Theory classes: 1h

Laboratory classes: 2h

Self study : 8h

5. Data acquisition systems

Description:

- Signal multiplexing
- A/D D/A conversión

Full-or-part-time: 11h

Theory classes: 1h

Laboratory classes: 2h

Self study : 8h

6. Smart sensors

Description:

- Concept
- Digital processing algorithms
- Field buses
- IEEE 1451 standard

Full-or-part-time: 8h

Theory classes: 1h

Laboratory classes: 2h

Self study : 5h

7. Semiconductor basics

Description:

1. Semiconductor fundamentals
2. Semiconductor crystal structures
3. Energy bands

Full-or-part-time: 5h 30m

Theory classes: 0h 30m

Self study : 5h

8. Carriers: Recombination, emission, and absorption

Description:

1. Carrier fundamentals
2. Density of states and carriers distribution
3. Carrier concentrations
4. Carrier recombination and generation

Full-or-part-time: 5h 30m

Theory classes: 0h 30m

Self study : 5h

9. Carrier transport

Description:

1. Carrier electrical currents
2. Drift transport and mobility
3. Diffusion transport
4. Conductivity and resistivity
5. Drift-diffusion model

Full-or-part-time: 5h 30m

Theory classes: 0h 30m

Self study : 5h

10. Junctions

Description:

1. Equilibrium PN homojunction.
2. Bias PN homojunction
3. Diode I?V equation
4. Transient and small?signal PN homojunction
5. Heterojunctions
6. Metal?semiconductor junctions

Full-or-part-time: 6h

Theory classes: 1h

Self study : 5h

11. LEDS

Description:

1. Principles
2. Basic Structures
3. Output Spectrum
4. Efficiencies
5. Modulation Effects
6. LED examples

Full-or-part-time: 6h

Theory classes: 1h

Self study : 5h

12. LASERS

Description:

1. Principles
2. Heterostructure Laser Diodes
3. Quantum Well Laser Diodes
4. Other Semiconductor Laser Diodes
5. Basic Semiconductor Laser Diode Characteristics

Full-or-part-time: 5h 30m

Theory classes: 0h 30m

Self study : 5h

13. Photodiodes

Description:

1. Semiconductor Light Absorption
2. Photoconductive parameters
3. PN Junction photodetection modes
4. PN Junction Photodiode
5. Quantum Efficiency and Responsivity
6. PIN Photodiode
7. APD Avalanche Photodiode
8. Photodiode Circuits

Full-or-part-time: 6h

Theory classes: 1h

Self study : 5h

14. Solar Cells

Description:

1. Semiconductor light absorption
2. Solar radiation spectrum
3. Photovoltaic performance
4. Equivalent circuit
5. Photovoltaic parameters
6. Solar cell structures

Full-or-part-time: 5h 30m

Theory classes: 0h 30m

Self study : 5h

15. Other Devices

Description:

Optofluidic devices

Full-or-part-time: 1h

Theory classes: 1h

Project

Description:

content english

Full-or-part-time: 6h

Theory classes: 6h

ACTIVITIES

LABORATORY

Description:

- Software for programmable instrumentation.
- Signal conditioning circuits and sensors for weather station.
- Data acquisition and processing
- Small project

Related competencies :

CE14. Ability to develop electronic instrumentation, as well as transducers, actuators and sensors.

CT4. EFFECTIVE USE OF INFORMATION RESOURCES: Managing the acquisition, structuring, analysis and display of data and information in the chosen area of specialisation and critically assessing the results obtained.

Full-or-part-time: 34h 20m

Practical classes: 13h

Guided activities: 8h 20m

Self study: 13h

EXERCISES

Description:

Exercises to strengthen the theoretical knowledge.

SHORT ANSWER TEST (CONTROL)

Description:

Mid term control.

EXTENDED ANSWER TEST (FINAL EXAMINATION)

Description:

Final examination.

GRADING SYSTEM

The subject is divided into 2 parts: Instrumentation and Optoelectronics. Each part has a weight of 50% in the final mark.

The qualification in Instrumentation (50%) considers:

I1- 20% laboratory work

I2- 30% Final Exam Instrumentation

The qualification in Optoelectronics (50%) considers:

O1- 30% Optoelectronics assignments and/or exercises done in class face-to-face.

O2- 20% Optoelectronics project

If the grade obtained in the average of O1 and O2 is equal to or higher than 5, it will not be necessary to take the final exam of the optoelectronics part. Otherwise, you will have to pass a final exam for this part.
