

## Course guide

### 34952 - AG - Algebraic Geometry

**Last modified:** 10/06/2023

<b>Unit in charge:</b>	School of Mathematics and Statistics	
<b>Teaching unit:</b>	749 - MAT - Department of Mathematics.	
<b>Degree:</b>	MASTER'S DEGREE IN ADVANCED MATHEMATICS AND MATHEMATICAL ENGINEERING (Syllabus 2010). (Optional subject).	
<b>Academic year:</b> 2023	<b>ECTS Credits:</b> 7.5	<b>Languages:</b> English

#### LECTURER

---

<b>Coordinating lecturer:</b>	MARIA ALBERICH CARRAMIÑANA
<b>Others:</b>	Segon quadrimestre: MARIA ALBERICH CARRAMIÑANA - A ROGER GÓMEZ LÓPEZ - A

#### PRIOR SKILLS

---

Aquaintance with mathematical computations, both by hand and with a computer, and mathematical reasoning, including proofs.

#### REQUIREMENTS

---

Basic abstract Algebra, Topology and Differential Geometry.

#### DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

---

##### Specific:

1. RESEARCH. Read and understand advanced mathematical papers. Use mathematical research techniques to produce and transmit new results.
2. CALCULUS. Obtain (exact or approximate) solutions for these models with the available resources, including computational means.
3. CRITICAL ASSESSMENT. Discuss the validity, scope and relevance of these solutions; present results and defend conclusions.

##### Transversal:

4. SELF-DIRECTED LEARNING. Detecting gaps in one's knowledge and overcoming them through critical self-appraisal. Choosing the best path for broadening one's knowledge.
5. EFFICIENT ORAL AND WRITTEN COMMUNICATION. Communicating verbally and in writing about learning outcomes, thought-building and decision-making. Taking part in debates about issues related to the own field of specialization.
6. THIRD LANGUAGE. Learning a third language, preferably English, to a degree of oral and written fluency that fits in with the future needs of the graduates of each course.
8. EFFECTIVE USE OF INFORMATION RESOURCES. Managing the acquisition, structure, analysis and display of information from the own field of specialization. Taking a critical stance with regard to the results obtained.

#### TEACHING METHODOLOGY

---

Approximately 50% of class time will be dedicated to interactive master classes, in which the lecturer will discuss course topics and propose small challenges and questions to solve. The other half of the class time will be structured as a problem-solving session, in which students will solve problems from a proposed list on the blackboard, based on the course syllabus, and their solutions will be discussed by the class.

## LEARNING OBJECTIVES OF THE SUBJECT

The main objective of the course is to introduce students to local algebraic geometry, with a focus on plane curve singularities. It aims to provide insight into the singularity theory of plane curves and the geometric theory of valuations of the ring of convergent series of two variables over the complex numbers. The course will demonstrate that singular points of algebraic curves in the complex plane is a meeting point for various areas of mathematics.

The course will heavily rely on examples, emphasizing the geometric significance of the subject. The specific topics for the final projects will be determined based on the students' interests.

## STUDY LOAD

Type	Hours	Percentage
Self study	127,5	68.00
Hours large group	60,0	32.00

**Total learning time:** 187.5 h

## CONTENTS

### Chapter 1: Parametrizing branches of plane curves

#### Description:

Newton-Puiseux algorithm, Weierstrass preparation and division theorems, Hensel's lemma. Intersection multiplicity: Halphen's formula. Testing analytic reducibility.

#### Full-or-part-time: 23h

Theory classes: 10h

Self study : 13h

### Chapter 2: Infinitely near points and resolutions of singularities

#### Description:

Proximity, Enriques diagrams, dual graph. Resolutions of singularities. Rings in successive neighbourhoods. The order of singularity.

#### Full-or-part-time: 23h

Theory classes: 10h

Self study : 13h

### Chapter 3: Topological classification of singularities

#### Description:

Topological classification of plane curves: equisingularity, semigroup of values, complete equisingularity invariants. Milnor number. Topological conic structure of a singularity. Topology of the singularity link. The Milnor fibration.

#### Full-or-part-time: 23h

Theory classes: 10h

Self study : 13h

#### Chapter 4: Constructions on the resolution tree

**Description:**

Homology of a blow-up. The exceptional divisor of a curve. Functions on the resolution tree. Complete ideals. Multiplier ideals and jumping numbers. Topological zeta function.

**Full-or-part-time:** 18h

Theory classes: 8h

Self study : 10h

#### Chapter 5: Analytic classification of plane curves

**Description:**

Jacobian ideal and its semimodule of values. Tjurina algebra and Tjurina number. Unfoldings of equations. Deformations of curves: versal and miniversal deformations. Zariski's moduli space. Teissier's monomial curve.

**Full-or-part-time:** 18h

Theory classes: 8h

Self study : 10h

#### Chapter 6: Valuations and complete ideals

**Description:**

Classification of valuations. Zariski decomposition of complete ideals.

**Full-or-part-time:** 18h

Theory classes: 8h

Self study : 10h

#### Chapter 7: Final projects

**Description:**

The final essays of the course on the topics chosen by the students will be presented by the students themselves and commented by the course lecturers.

**Full-or-part-time:** 25h

Theory classes: 5h

Self study : 20h

### GRADING SYSTEM

Students who solve a sufficient number of problems on the blackboard during the problem-solving class will pass the course. If they wish to improve their grade from a passing grade to a higher score, they will be assigned a final project. The final project will involve studying, writing an essay and delivering a lecture on an additional topic towards the end of the course.

Students who have not actively participated enough in the problem-solving class, or still wish to improve their grade even after completing the problem class and final project, will be required to take a final exam lasting approximately 4 hours.

## EXAMINATION RULES.

---

The problem list for participation in the problem-solving class will be published at the beginning of each course unit. Students are expected to prepare these problems in advance at home.

The topics for optional final projects aimed at increasing grades will be proposed around Easter. Students will be responsible for preparing the lecture and the essay of the final project independently at home.

Students who choose to take the final exam will be required to do so without any notes, books, or other materials whatsoever.
