Guia docent
205223 - TCEA - Turbulència en Ciència i Enginyeria Aeroespacial

Última modificació: 04/06/2020

Unitat responsable: Escola Superior d'Enginyeries Industrial, Aeroespacial i Audiovisual de Terrassa
Unitat que imparteix: 748 - FIS - Departament de Física.

Titulació: GRAU EN ENGINYERIA EN TECNOLOGIES AEROESPACIALS (Pla 2010). (Assignatura optativa).
GRAU EN ENGINYERIA EN VEHICLES AEROESPACIALS (Pla 2010). (Assignatura optativa).

Curs: 2020 **Crèdits ECTS:** 3.0 **Idiomes:** Anglès

PROFESSORAT

Professorat responsable: JUAN PEDRO MELLADO GONZALEZ

Altres:

CAPACITATS PRÈVIES

Good knowledge of Fluid Mechanics is required, some knowledge of aerodynamics and propulsion is advantageous.

METODOLOGIES DOCENTS

Each session consists of a theoretical part and a practical part. In the practical part, a set of small exercises will be solved and discussed in class to fix the main ideas and concepts of the session. The take-home assignments will also be discussed during this practical part, when needed. The course material will be the course notes, slides, audiovisual material, and a small set of turbulence data to illustrate the analysis approaches described in the course.

OBJECTIUS D'APRENENTATGE DE L'ASSIGNATURA

This course is an introduction to the fundamental concepts of turbulent flows and its importance in aerospace science and engineering. The course will focus on the physical processes involved in turbulence and turbulent mixing in general configurations such as jets, wakes, shear layers and boundary layers in engineering and in the atmosphere.
At the end of the course, the student will have the background necessary to understand and assess turbulence effects in aerodynamics, propulsion and air traffic management. Furthermore, the student will have the background for advanced courses and research in turbulence analysis and turbulence modeling.

HORES TOTALS DE DEDICACIÓ DE L'ESTUDIANTAT

Tipus	Hores	Percentatge
Hores aprenentatge autònom	45,0	60.00
Hores grup gran	30,0	40.00

Dedicació total: 75 h

CONTINGUTS

Module 1: Introduction to turbulent flows

Descripció:
The need of studying turbulent flows in aerospace science and engineering. Defining properties of turbulent flows. Methods of Analysis. The Richardson energy cascade as an example of phenomenology and conceptual models.
Short review of Navier Stokes equations, vorticity and dimensional analysis as needed for the remaining of the course.

Dedicació: 12h 30m
Grup gran/Teoria: 5h
Aprenentatge autònom: 7h 30m

Module 2: Mean-flow equations

Descripció:
Statistical description of turbulent flows. Reynolds decomposition and probability density functions. Derivation and discussion of Reynolds equations. The closure problem.

Dedicació: 12h 30m
Grup gran/Teoria: 7h 30m
Aprenentatge autònom: 5h

Module 3: Variances and Covariances

Descripció:
Derivation and discussion of Reynolds-stress equations. Two-point statistics, correlation and spectra. Scale separation and the Richardson energy cascade. Kolmogorov hypothesis. Consequences and limitations.

Dedicació: 12h 30m
Grup gran/Teoria: 5h
Aprenentatge autònom: 7h 30m

Module 4: Turbulence modeling

Descripció:
Direct numerical simulation. Large-eddy simulations. Reynolds-averaged Navier-Stokes. Turbulent-viscosity models.

Dedicació: 12h 30m
Grup gran/Teoria: 5h
Aprenentatge autònom: 7h 30m

Module 5: Reference configurations in aerospace science and engineering

Descripció:
Major aspects of boundary-free shear turbulence (jet flows, shear layers and wakes). Major aspects of wall-bounded flows (channel flow, pipe flows and turbulent boundary layers). Major aspects of buoyancy effects (atmospheric turbulence and the atmospheric boundary layer).

Dedicació: 25h
Grup gran/Teoria: 10h
Aprenentatge autònom: 15h

SISTEMA DE QUALIFICACIÓ

5 take-home assignments (100% of the final grade).

In case of failing, the grade will be based on one additional written in-class exam on the date fixed in the calendar of final exams. The grade obtained in the additional written in-class exam will range between 0 and 10 and will replace that of the course based on the take-home assignments.
