200004 - CD - Differential Calculus

Coordinating unit: 200 - FME - School of Mathematics and Statistics
Teaching unit: 749 - MAT - Department of Mathematics
Academic year: 2018
Degree: BACHELOR'S DEGREE IN MATHEMATICS (Syllabus 2009). (Teaching unit Compulsory)
ECTS credits: 7,5
Teaching languages: Catalan, Spanish

Teaching staff
Coordinator: NARCISO ROMAN ROY
Others:
- CARLES BATLLE ARNAU - B
- GUILLEM BLANCO FERNÁNDEZ - A, B
- ÓSCAR RIVERO SALGADO - A, B
- NARCISO ROMAN ROY - A, B
- NATALIA SADOVSKAIA NURIMANOVA - A

Degree competences to which the subject contributes

Specific:
1. CE-2. Solve problems in Mathematics, through basic calculation skills, taking into account tools availability and the constraints of time and resources.
2. CE-3. Have the knowledge of specific programming languages and software.
3. CE-4. Have the ability to use computational tools as an aid to mathematical processes.

General:
4. CB-1. Demonstrate knowledge and understanding in Mathematics that is founded upon and extends that typically associated with Bachelor's level, and that provides a basis for originality in developing and applying ideas, often within a research context.
5. CB-2. Know how to apply their mathematical knowledge and understanding, and problem solving abilities in new or unfamiliar environments within broader or multidisciplinary contexts related to Mathematics.
6. CB-3. Have the ability to integrate knowledge and handle complexity, and formulate judgements with incomplete or limited information, but that include reflecting on social and ethical responsibilities linked to the application of their knowledge and judgements.
7. CG-1. Show knowledge and proficiency in the use of mathematical language.
8. CG-2. Construct rigorous proofs of some classical theorems in a variety of fields of Mathematics.
9. CG-3. Have the ability to define new mathematical objects in terms of others already know and ability to use these objects in different contexts.
10. CG-4. Translate into mathematical terms problems stated in non-mathematical language, and take advantage of this translation to solve them.
12. CG-6 Detect deficiencies in their own knowledge and pass them through critical reflection and choice of the best action to extend this knowledge.

Transversal:
11. SELF-DIRECTED LEARNING. Detecting gaps in one's knowledge and overcoming them through critical self-appraisal. Choosing the best path for broadening one's knowledge.

</tbody>
</table>
### Content

<table>
<thead>
<tr>
<th>1. Topology of R^n. Sequences of vectors.</th>
<th>Learning time: 25h</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Theory classes: 6h</td>
</tr>
<tr>
<td></td>
<td>Practical classes: 4h</td>
</tr>
<tr>
<td></td>
<td>Self study: 15h</td>
</tr>
</tbody>
</table>

**Description:**
- Euclidean, normed and metric spaces. Case study: R^n.
- Open and closed sets. Interior, exterior and boundary of a set.
- Connected sets.

<table>
<thead>
<tr>
<th>2. Limits and continuity of functions.</th>
<th>Learning time: 25h</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Theory classes: 6h</td>
</tr>
<tr>
<td></td>
<td>Practical classes: 4h</td>
</tr>
<tr>
<td></td>
<td>Self study: 15h</td>
</tr>
</tbody>
</table>

**Description:**
- Functions of several variables. Level sets and graphics of real functions
- Limit of a function at a point (special emphasis on the case of two variables).
- Continuity at a point and a set. Properties of continuous functions.
- Continuity and compactness. Weierstrass theorem.
- Uniform continuity. Heine-Cantor theorem.
- Equivalence norms and equivalence metrics. Fixed point theorem.

<table>
<thead>
<tr>
<th>3. Differentiability.</th>
<th>Learning time: 32h 30m</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Theory classes: 8h</td>
</tr>
<tr>
<td></td>
<td>Practical classes: 5h</td>
</tr>
<tr>
<td></td>
<td>Self study: 19h 30m</td>
</tr>
</tbody>
</table>

**Description:**
- Differentiability at a point. Hyperplane tangent to the graph of a real function.
- Differentiability and operations. Chain rule. Relationship between differentiability, continuity and partial derivatives.
- Differentiability in an open set. Mean Value Theorem. Functions of class C^1.
- Differentiable curves. Tangent vector.
### 4. Theorems of differentiable functions.

**Learning time:** 34h  
Theory classes: 9h  
Practical classes: 5h  
Self study: 20h  

**Description:**  
- The inverse function theorem. Diffeomorphisms.  
- The implicit function theorem. Derivatives of implicit functions.  
- Rank theorems.

### 5. Taylor formula. Local extrema.

**Learning time:** 24h  
Theory classes: 5h  
Practical classes: 4h  
Self study: 15h  

**Description:**  
- Taylor formula. Expressions of the rest.  
- Local extrema. Critical points.  
- Classification of critical points: quadratic forms, Hessian matrix.  
- Criteria of Silvester and of eigenvalues of the Hessian matrix.

### 6. Submanifolds of Rn and constrained extrema.

**Learning time:** 22h  
Theory classes: 5h  
Practical classes: 4h  
Self study: 13h  

**Description:**  
- Taylor's formula. And Taylor rest.  
- Local extrema. Critical points.  
- Classification of stationary points: Quadratic forms, Hessian matrix.  
- Submanifolds of Rn. Tangent vectors. Tangent and normal spaces at a point.  
- Parameterized and implicit submanifolds. Regular curves and surfaces.  
- Constrained extrema and Lagrange multipliers.  
- Absolute extrema.
Qualification system

Final Mark = \text{Max}(\text{Final Exam}, 0.7 \times \text{Final Exam} + 0.3 \times \text{Midterm Exam})

Eventually, the grading of the mid-term exam could be modified by other grades.

An extra exam will take place on July for students that failed during the regular semester.
