200141 - EDOS - Ordinary Differential Equations

Coordinating unit: 200 - FME - School of Mathematics and Statistics
Teaching unit: 749 - MAT - Department of Mathematics
Academic year: 2018
Degree: BACHELOR'S DEGREE IN MATHEMATICS (Syllabus 2009). (Teaching unit Compulsory)
ECTS credits: 7.5

Teaching languages: Catalan

Teaching staff

Coordinator: INMACULADA CONCEPCION BALDOMA BARRACA

Others: Primer quadrimestre:
        INMACULADA CONCEPCION BALDOMA BARRACA - A, B
        MARCEL GUARDIA MUNARRIZ - B
        PAU MARTIN DE LA TORRE - A

Opening hours

Timetable: Send an e-mail to the professor to make an appointment.

Prior skills

Linear and multilinear algebra, differential and integral calculus, topology, physics, computer science, and one complex variable.

Degree competences to which the subject contributes

Specific:
1. CE-2. Solve problems in Mathematics, through basic calculation skills, taking in account tools availability and the constraints of time and resources.
2. CE-3. Have the knowledge of specific programming languages and software.
3. CE-4. Have the ability to use computational tools as an aid to mathematical processes.

General:
5. CB-1. Demonstrate knowledge and understanding in Mathematics that is founded upon and extends that typically associated with Bachelor's level, and that provides a basis for originality in developing and applying ideas, often within a research context.
6. CB-2. Know how to apply their mathematical knowledge and understanding, and problem solving abilities in new or unfamiliar environments within broader or multidisciplinary contexts related to Mathematics.
7. CB-3. Have the ability to integrate knowledge and handle complexity, and formulate judgements with incomplete or limited information, but that include reflecting on social and ethical responsibilities linked to the application of their knowledge and judgements.
8. CG-1. Show knowledge and proficiency in the use of mathematical language.
10. CG-3. Have the ability to define new mathematical objects in terms of others already know and ability to use these objects in different contexts.
11. CG-4. Translate into mathematical terms problems stated in non-mathematical language, and take advantage of...
At the end of the course, students should be able: 1) To apply the fundamental theorems of ODEs; 2) To solve several simple ODEs (first-order linear ODEs, separable ODEs, Bernoulli, Ricatti, linear ODEs with constant coefficients, etc.); 3) To sketch the phase portrait of 2D and 3D systems of linear ODEs with constant coefficients; 4) To determine the stability of systems of linear ODEs with periodic coefficients; and 5) To determine the stability of some simple solutions of systems of nonlinear ODEs.

12. CG-6 Detect deficiencies in their own knowledge and pass them through critical reflection and choice of the best action to extend this knowledge.

Transversal:

4. SELF-DIRECTED LEARNING. Detecting gaps in one's knowledge and overcoming them through critical self-appraisal. Choosing the best path for broadening one's knowledge.

Teaching methodology

There are 3 hours per week of "magistral lectures" (exposition of theoretical aspects), and 2 hours per week of "problem solving."

Learning objectives of the subject

At the end of the course, students should be able: 1) To apply the fundamental theorems of ODEs; 2) To solve several simple ODEs (first-order linear ODEs, separable ODEs, Bernoulli, Ricatti, linear ODEs with constant coefficients, etc.); 3) To sketch the phase portrait of 2D and 3D systems of linear ODEs with constant coefficients; 4) To determine the stability of systems of linear ODEs with periodic coefficients; and 5) To determine the stability of some simple solutions of systems of nonlinear ODEs.

## Content

<table>
<thead>
<tr>
<th>Course Title</th>
<th>Learning time: 60h</th>
</tr>
</thead>
</table>
| Fundamental theorems | Theory classes: 18h  
Practical classes: 6h  
Self study: 36h |
| **Description:** | Presentation and motivation. Geometric interpretation: vectorfields. Initial value problems (IVPs). Existence and uniqueness theorems. Maximal solutions. Regularity with respect to initial conditions and parameters. |

<table>
<thead>
<tr>
<th>Course Title</th>
<th>Learning time: 25h</th>
</tr>
</thead>
</table>
| Solving simple ODEs | Theory classes: 0h  
Practical classes: 10h  
Self study: 15h |
| **Description:** | First-order linear ODEs. Separable ODEs and integrant factor. Changes of variables. Homogeneous, Bernoulli, Ricatti, Lagrange, and Clairaut ODEs. |

<table>
<thead>
<tr>
<th>Course Title</th>
<th>Learning time: 50h</th>
</tr>
</thead>
</table>
| Linear equations and linear systems | Theory classes: 10h  
Practical classes: 10h  
Self study: 30h |

<table>
<thead>
<tr>
<th>Course Title</th>
<th>Learning time: 27h 30m</th>
</tr>
</thead>
</table>
| Introduction to the qualitative theory of ODEs | Theory classes: 11h  
Practical classes: 0h  
Self study: 16h 30m |
| **Description:** | Classification of 2D and 3D systems of linear ODEs with constant coefficients. Stability of systems of linear ODEs with periodic coefficients. Stability of some simple solutions of nonlinear systems. |
A partial exam (P), and a final exam (F). The final grade is
\[ N = \max(F, 0.3 \times P + 0.7 \times F) \]

An extra exam will take place on July for students that failed during the regular semester.

**Bibliography**

**Basic:**

This review is added to solve the discrepancy between the 75 presencial classes that appear in the year planning and the (approximately) 65 classes that are really given.
