TEACHING METHODOLOGY
This is a hands-on course where students will learn and implement Creativity and Design Thinking methodologies to solve a real challenge from the industry, using HP’s additive manufacturing technology. They will work hand by hand with HP’s industry experts and industrial companies, learning how to identify opportunities for the adoption of 3D printing production. Students will practice how to guide teams into the unknown through the process of experimentation, understanding user needs, generating innovative solutions & reducing the risks of launching new ideas through Minimum Viable Products.
During the course different ideas will be developed and the best idea of each group will be printed with the HP additive manufacturing technology. In total, each group will have two prints granted by HP.

LEARNING OBJECTIVES OF THE SUBJECT
The main objective of this course is to train students to solve industry challenges using additive manufacturing technologies.
