DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Specific:
1. The ability to solve mathematical problems that may arise in an engineering context. The ability to apply knowledge of linear algebra; geometry; differential geometry; differential and integral calculus; differential and partial differential equations; numerical methods; numerical algorithms; statistics and optimisation

TEACHING METHODOLOGY

· Attendance sessions of exposition of the contents  
· Attendance sessions of practical work.  
· Self-developed study and realization of exercises.

During theory lessons the basic concepts will be introduced, as well as examples and practical cases. In the practical lessons, the students are due to solve problems in order to help them to understand the concepts and to acquire the ability of correctly expressing themselves.

The students are due to solve a problems collection during both attendance and not attendance work.

A solved list of problems will be available in order to be a reference for the students.

LEARNING OBJECTIVES OF THE SUBJECT

Providing basic knowledge about differential and integral calculus in one variable. Introduction to complex numbers.
