DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Specific:
1. GrETA/GrEVA - An adequate understanding of the following, as applied to engineering: the basics of fluid mechanics; the basic principles of flight control and automation; the main characteristics and physical and mechanical properties of materials

TEACHING METHODOLOGY

It is divided into three parts:
· Attendance lessons of exposition of the contents
· Attendance lessons of evaluable group work.
· Self-study and exercises.
In the first ones, the teacher will expose the theoretical basis of the subject, concepts, methodology and results, that will go along with examples in order to easy the comprehension of the subject.
In the second ones, the students will develop the laboratory practices under the supervision and help of the teacher.
The students, autonomously, will study to assimilate the concepts and resolve the exercises.

LEARNING OBJECTIVES OF THE SUBJECT

Get the basic knowledge to model, analyse, and design the automatic control systems. It will be given special importance to concepts of stability and performance of closed-loop systems and their limitations.
Use of the computer to implement application examples of the concepts.

GRADING SYSTEM

- Laboratory: 20%
- Midterm exam: 35%
- Final exam: 35%
- Laboratory exam: 10%

Unsatisfactory results in the midterm exam (examen parcial) can be recovered by doing a global exam that covers the first and second part of the course. The global exam will be held on the same date and hour scheduled for the final exam of the course. The mark of this global exam may replace the one obtained in the midterm exam if it is higher than this.

All the students, who wish so, can opt for this mechanism by sending an email to the coordinator of the course. Laboratory grades are exempt from this recovering mechanism.

EXAMINATION RULES

All the activities are mandatory
