220022 - Structural Theory

Coordinating unit: 205 - ESEIAAT - Terrassa School of Industrial, Aerospace and Audiovisual Engineering
Teaching unit: 737 - RMEE - Department of Strength of Materials and Structural Engineering
Academic year: 2019
Degree: BACHELOR'S DEGREE IN AEROSPACE TECHNOLOGY ENGINEERING (Syllabus 2010). (Teaching unit Compulsory)
BACHELOR'S DEGREE IN AEROSPACE VEHICLE ENGINEERING (Syllabus 2010). (Teaching unit Compulsory)
ECTS credits: 7,5
Teaching languages: Spanish

Teaching staff

Coordinator: Rafael Weyler Pérez
Others: Fruitos Bickham, Oscar Alejandro
Alegre Carrasquer, Daniel
Martínez Piñol, José Ramón

Degree competences to which the subject contributes

Specific:
1. GrETA/GrEVA - An understanding of the behaviour of structures under stress in ordinary and extreme conditions.
2. GrETA/GrEVA - An adequate understanding of the following, as applied to engineering: principles of continuum mechanics and techniques for calculating response.

Teaching methodology

It is divided into three parts:
- Theory lessons where the basic concepts are developed. They took place in the classroom and it is used the expositive method.
- Exercises lessons, where the theoretical concepts are applied to the resolution of practical examples. It takes place in the classroom, in smaller groups than the ones of theory lessons.
- Laboratory practices, where, in reduced groups and in a guided way, the students get in contact with the experimental methodology

At the same time, it will be proposed the realization of problems and exercises, as well as the elaboration of a laboratory report that has to be made out of the class hours.

Learning objectives of the subject

Get the student to understand the behaviour of the structures and resistant structures and to be able of design a structure that is capable of support the efforts that the structures are brought under in good conditions, facing breaking and with deformations compatible with their functionality.
## Study load

<table>
<thead>
<tr>
<th>Total learning time: 187h 30m</th>
<th>Hours large group:</th>
<th>47h</th>
<th>25.07%</th>
</tr>

| 1. Elasticity fundaments. | **Learning time:** 65h 30m  
Theory classes: 15h  
Practical classes: 7h 30m  
Laboratory classes: 3h  
Self study: 40h |  |
| 2. Prismatic part: Study of the straight section. | **Learning time:** 65h 30m  
Theory classes: 15h  
Practical classes: 7h 30m  
Laboratory classes: 3h  
Self study: 40h |  |
| 3. Prismatic part: behaviour. | **Learning time:** 31h  
Theory classes: 7h  
Practical classes: 6h  
Laboratory classes: 2h  
Self study: 16h |  |
| 4. Structure calculus | **Learning time:** 25h 30m  
Theory classes: 8h  
Practical classes: 1h 30m  
Self study: 16h |  |
### Planning of activities

</tbody>
</table>

### Qualification system

- Laboratory practices: 10%
- Partial exam: 30%
- Final exam: 50%
- Proposed activity 10%

It will be a method to recover unsatisfactory results in the partial exam.

### Regulations for carrying out activities

The laboratory practices along with the laboratory reports are mandatory to pass the subject.
