Degree competences to which the subject contributes

Specific:

2. GrETA/GrEVA - Applied knowledge of materials science and technology; mechanics and thermodynamics; fluid mechanics; aerodynamics and flight mechanics; navigation systems and air traffic; aerospace technology; structural theory; economy and production; projects; environmental impact.

Transversal:

1. THIRD LANGUAGE. Learning a third language, preferably English, to a degree of oral and written fluency that fits in with the future needs of the graduates of each course.

Teaching methodology

- Attending classes of exposition of the contents.
- Attending classes of practical work.
- Autonomous work of study and preparation of written reports.
- Autonomous work of study and preparation of oral presentations.
- Preparation and fulfillment of group activities.
- Visits to sector companies directly related to the subject matter.

In the attending classes of exposition of the contents, the teacher will introduce the theoretical bases of the subject, concepts, methods and results, illustrating them with convenient examples.

Learning objectives of the subject

The main goal of this subject consists in offering to the students an opportunity to extend their academic and technical education concerning last generation lightweight materials, which have arisen as the result of new challenges and industrial requirements. These new requirements depend on one side on the research of new materials with pre-designed and controllable physical-chemical properties and, on the other, on the improvement of new processing and characterization techniques, which would enable to control and assess their properties. During the course of the subject, the students will gather new knowledge on the actual trends in the development of new lightweight cellular materials (foams), nano-structured and multifunctional materials for engineering applications, focusing on the improvement of their specific mechanical properties, fire retardancy, optical and transport properties, among many others, and advanced
processing techniques. It is foreseeable the existence of theoretical-practical seminars, as well as visits to sector companies directly related to the subject matter.

# Module 1: Introduction to lightweight materials for engineering applications

**Learning time:** 2h  
Theory classes: 2h

## Description:

1. Introduction  
1.1. Overview: the concept of composite  
1.2. Nanocomposites  
1.2.1. Classification  
1.2.2. Types of fillers: spherical, layered and fibre-like  
2. Lightweight composites and nanocomposites  
2.1. Lightweight metal and ceramic (nano)composites  
2.2. Polymer-based nanocomposites  
2.3. Natural nanobiocomposites  
3. Properties and testing of (nano)composites  
3.1. Mechanical properties  
3.2. Transport properties  
3.2.1. Thermal conductivity  
3.2.2. Electrical conductivity  
3.2.3. Permeability/gas diffusion  
3.3. Flame retardancy of polymers  
3.3.1. Fundamentals of polymer burning  
3.3.2. Techniques to study the thermal stability and fire behavior of polymers  
3.3.3. Regulation and testing  
3.3.4. Strategies for improving fire resistance  
3.3.5. Practical cases

- Activity 6

# Module 2: Novel composite and nanocomposite materials

**Learning time:** 27h  
Theory classes: 8h  
Practical classes: 4h  
Self study: 15h

## Description:

1. Introduction  
1. Nanocomposites  
1.1. Classification  
1.2. Types of fillers: spherical, layered and fibre-like  
2. Lightweight metal and ceramic (nano)composites  
2. Polymer-based nanocomposites  
2.3. Natural nanobiocomposites  
3. Properties and testing of (nano)composites  
3.1. Mechanical properties  
3.2. Transport properties  
3.2.1. Thermal conductivity  
3.2.2. Electrical conductivity  
3.2.3. Permeability/gas diffusion  
3.3. Flame retardancy of polymers  
3.3.1. Fundamentals of polymer burning  
3.3.2. Techniques to study the thermal stability and fire behavior of polymers  
3.3.3. Regulation and testing  
3.3.4. Strategies for improving fire resistance  
3.3.5. Practical cases

</tbody>
</table>

<table>
<thead>
<tr>
<th>ACTIVITY 1: REPORT/PRESENTATION ABOUT THE SELECTION OF A LIGHTWEIGHT FUNCTIONAL MATERIAL FOR A GIVEN APPLICATION (GROUP WORK).</th>
<th>Hours: 14h</th>
</tr>
</thead>
<tbody>
<tr>
<td>Theory classes: 2h</td>
<td></td>
</tr>
<tr>
<td>Self study: 12h</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>ACTIVITY 2: REPORT ABOUT RECENT DEVELOPMENTS IN LIGHTWEIGHT MATERIALS (INDIVIDUAL WORK.).</th>
<th>Hours: 12h</th>
</tr>
</thead>
<tbody>
<tr>
<td>Self study: 12h</td>
<td></td>
</tr>
</tbody>
</table>

**Description:**
Each student will prepare a report about new developments in the manufacturing and production of lightweight materials, focusing on their main characteristics, differences/advantages with existing technologies and innovations.

**Support materials:**
- Recommended bibliography.
- Other sources: books, articles, internet, etc.

**Descriptions of the assignments due and their relation to the assessment:**
- Written report.

**Specific objectives:**
- To learn about the importance of processing on attaining functional lightweight components for engineering applications.

<table>
<thead>
<tr>
<th>ACTIVITY 3: MATERIAL SELECTION: USE OF EDUPACK SOFTWARE. REPORT ABOUT THE SELECTION OF A MATERIAL OR GROUP OF MATERIALS FOR A CHOSEN ENGINEERING APPLICATION.</th>
<th>Hours: 14h</th>
</tr>
</thead>
<tbody>
<tr>
<td>Theory classes: 2h</td>
<td></td>
</tr>
<tr>
<td>Self study: 12h</td>
<td></td>
</tr>
</tbody>
</table>

**Description:**
The students will prepare a report about the selection of a material or group of materials for a chosen engineering application using specific material selection software (Edupack software), explaining its characteristics, properties, processing methods and other applications.

**Support materials:**
- Edupack material selection software.

**Descriptions of the assignments due and their relation to the assessment:**
- Written report.
### ACTIVITY 4: VISIT TO A SECTOR COMPANY.

**Description:**
Visit to a sector company directly related to the subject matter.

**Specific objectives:**
To get in touch with an industrial manufacturing company directly related to the subject matter.

**Hours:** 2h
- Theory classes: 2h

### ACTIVITY 5: VISIT TO A RESEARCH AND DEVELOPMENT CENTER.

**Description:**
Visit to a research and development center directly related to the subject matter.

**Specific objectives:**
To understand the work behind the development of new functional materials for a given application.

**Hours:** 2h
- Theory classes: 2h

### ACTIVITY 6: EXAMINATION.

**Description:**
Written test in which the student will have to show his/her knowledge of the contents learned in class.

**Specific objectives:**
To develop the contents learned in the theoretical and practical classes and demonstrate the level of knowledge.

**Hours:** 11h
- Theory classes: 2h
- Self study: 9h

### Qualification system

The final degree of the subject will depend on four evaluation activities:
- Activity 1: 25%
- Activity 2: 25%
- Activity 3: 10%
- Activity 6 (exam): 40%
220036 - Lightweight Materials for Engineering Applications

Regulations for carrying out activities

Activity 1 - Written report/oral presentation in groups formed by a minimum of 2 students and a maximum of 4.
Activity 2 - Individual written report.
Activity 3 - Individual written report.
Activity 6 - Individual written exam.
