Course guides
220073 - 220073 - Mechanics of Robotic Manipulation

Unit in charge: Terrassa School of Industrial, Aerospace and Audiovisual Engineering
Teaching unit: 712 - EM - Department of Mechanical Engineering.

Degree:
- BACHELOR'S DEGREE IN AEROSPACE TECHNOLOGY ENGINEERING (Syllabus 2010). (Optional subject).
- BACHELOR'S DEGREE IN INDUSTRIAL TECHNOLOGY ENGINEERING (Syllabus 2010). (Optional subject).
- BACHELOR'S DEGREE IN AEROSPACE VEHICLE ENGINEERING (Syllabus 2010). (Optional subject).

Academic year: 2020  ECTS Credits: 3.0  Languages: English

LECTURER

Coordinating lecturer: Francisco Javier Freire Venegas

Others:

TEACHING METHODOLOGY

This course is self-study oriented. Every week will be proposed on ATENEA net:
- a) a theoretical matter to self-study using easily reached multimedia documentation.
- b) some questions to be answered before the practical classes.
- c) some problems to be done at practical classes using MAPLE software at ESEIAAT premises.

At the end of the course a 6 d.o.f. robot model project, using MAPLE, will be delivered.

In the practical classes (in the classroom with PCs), teachers will guide the students in applying theoretical concepts to solve problems, always using critical reasoning. We propose that students solve exercises in and outside the classroom, to promote contact and use the basic tools needed to solve problems.

Students, independently, need to work on the materials provided by teachers and the outcomes of the sessions of exercises/problems, in order to fix and assimilate the concepts.

The teachers provide the syllabus and monitoring of activities (by ATENEA).

LEARNING OBJECTIVES OF THE SUBJECT

This course provides an overview of robot mechanisms, kinematics and dynamics. Topics include spatial kinematics and multi-rigid-body dynamics. Students will simulate robotic systems in a group-based term project.

STUDY LOAD

<table>
<thead>
<tr>
<th>Type</th>
<th>Hours</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hours large group</td>
<td>30,0</td>
<td>40.00</td>
</tr>
<tr>
<td>Self study</td>
<td>45,0</td>
<td>60.00</td>
</tr>
</tbody>
</table>

Total learning time: 75 h
## CONTENTS

**Module 1: Spatial Descriptions and Transformations**

**Description:**
Transformation matrices

**Full-or-part-time:** 15 h  
Theory classes: 6h  
Self study: 9h

**Module 2: Kinematics. Inverse Kinematics**

**Description:**
Robot Kinematics

**Full-or-part-time:** 20 h  
Theory classes: 8h  
Self study: 12h

**Module 3: Jacobians. Singularities. Static Forces**

**Description:**
Jacobian utility and computation.

**Full-or-part-time:** 20 h  
Theory classes: 8h  
Self study: 12h

**Module 4: Introduction to Robot Dynamic**

**Description:**
Introduction to Robot Dynamic

**Full-or-part-time:** 20 h  
Theory classes: 8h  
Self study: 12h

## GRADING SYSTEM

Theoretical questions 10%  
Practical work at practical classes 50% (every work will have the same weight)  
Robot model project 40%

Every student that will want to improve his grade may try it at the exam planned at the end of the course. The best note will be conserved.
