Course guide
220112 - FT - Fluid Technology

Unit in charge: Terrassa School of Industrial, Aerospace and Audiovisual Engineering
Teaching unit: 729 - MF - Department of Fluid Mechanics.

Degree: BACHELOR'S DEGREE IN INDUSTRIAL TECHNOLOGY ENGINEERING (Syllabus 2010). (Compulsory subject).

Academic year: 2022 ECTS Credits: 4.5 Languages: Catalan

LECTURER

Coordinating lecturer: Pedro Javier Gamez-Montero
Others: Codina Macia, Esteban

PRIOR SKILLS

It is believed to be essential to have passed the subject of Fluid Mechanics.

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Specific:
1. Applied knowledge of the fundamentals of fluid-mechanics systems and machines.

TEACHING METHODOLOGY

Large group: Calculation and Design Methodologies
In the face-to-face presentation sessions, the teacher will introduce the theoretical bases of the subject, concepts, methods and results, illustrating them with convenient examples to facilitate their understanding. Theory classes combine expository method and active learning directly related to Activity 1 and particular examples and applications related to Activity 2 will be worked on.

Small Group: Lab / Application Workshops
The laboratory classes, in small groups, will be held in the laboratory or in computer rooms. The practical work is carried out individually, in pairs and teams, to be specified in each laboratory / workshops. The objective is for students to be able to collect data, process it, analyse it and draw conclusions, comparing the results with other reference, theoretical, numerical, or experimental data. The classes are directly related to the activities of seminars I to VI.

Autonomous Learning
Students should autonomously study and exercise to assimilate and learn the concepts, solve the proposed exercises either manually or with the help of the computer. The activities programmed outside the classroom will be designed to serve as self-learning, carrying out evaluable activities and solving the questionnaires.
**LEARNING OBJECTIVES OF THE SUBJECT**

After completing the course, students must have achieved Level 3 (application) with general learning objectives:

Technology in the field of specialty
· Understand the scientific foundations
· Know how to use the technology and the necessary engineering

professional performance
· Analyze specific situations, define problems, make decisions and implement plans of action in the search for solutions.
· Apply knowledge to real situations, managing resources appropriately.
· Interpret studies, reports, and analyze data numerically.
· Select and manage the information sources.
· Use existing tools as support.
· Working in a multidisciplinary team.
· Evaluate the integral, personal motivation, mobility.

communication
· Understand and speak with the proper terminology.
· Discuss and argue on various forums.

Technology transfer.
· Analyze and evaluate the environmental, social and ethical profession.
· Have a critical and innovative spirit.
· Retraining in new technological developments through continuous learning.

**Total learning time:** 112.5 h

**CONTENTS**

**Module 1: INTRODUCTION TO FLUID-DYNAMIC DESIGN**

**Description:**
1.1. Analysis / Design (direct problem and inverse problem)
1.2. Types of analysis: integral, differential, and dimensionless
1.3. Fluids
1.4. Examples of applications

**Related activities:**
Theory lectures with examples and problems / applications
Activity 1 (active learning in the classroom)
Activity 2 (exercises / applications)
Activity 3 (self-learning questionnaires)
Activity 4 (knowledge control)
Activity 5 (partial exam)

**Full-or-part-time:** 7h 30m
Theory classes: 3h
Self study: 4h 30m
Module 2: HYDROSTATIC ANALYSIS

Description:
2.1. Hydrostatic gravity field
2.2. Hydrostatic forces on surfaces
2.3. Buoyancy
2.4. Stability of floating and submerged bodies
2.5. Examples of applications

Related activities:
Theory lectures with examples and problems / applications
Activity 1 (active learning in the classroom)
Activity 2 (exercises / applications)
Activity 3 (self-learning questionnaires)
Activity 4 (knowledge control)
Activity 5 (partial exam)
Activity 8 (seminar I: problem solving strategies)

Full-or-part-time: 12h 30m
Theory classes: 3h
Laboratory classes: 2h
Self study: 7h 30m

Module 3: INTEGRAL DYNAMIC ANALYSIS

Description:
3.1. Propaedeutic concepts: conservation laws
3.2 Integral and differential formulation
3.3 Macroscopic isothermal systems
3.4 Design and calculation examples of elements, machinery and equipment for handling fluids (agitators, jets, tanks, piping systems turbomachinery control systems, etc.)
3.5 Use of macroscopic balances to raise unsteady flow problems
3.6 Examples and practical cases

Related activities:
Theory lectures with examples and problems / applications
Activity 1 (active learning in the classroom)
Activity 2 (exercises / applications)
Activity 3 (self-learning questionnaires)
Activity 4 (knowledge control)
Activity 5 (partial exam)
Activity 7 (lab/workshop final test)
Activity 9 (workshop II: introduction to CFD)

Full-or-part-time: 30h
Theory classes: 10h
Laboratory classes: 2h
Self study: 16h
Module 4: DIFFERENTIAL DYNAMIC ANALYSIS

Description:
4.1. Propaedeutic concepts: equations of motion: Cauchy, Navier-Stokes, Reynolds, Euler, Bernoulli
4.2 Flow dominated by viscosity (Low Re). Couette flow and Hagen-Poiseuille flow.
4.3. Examples of applications of low Re flows: bearings (hydrostatic and dynamic fluid), lubrication, food handling, flow in porous media, etc.
4.4 Ideal flow (High Re). Euler’s equation and study of the fluid particle along and normal to a stream line.
4.5. Examples of applications of high Re flows: objects submerged in a stream, drag and lift for symmetric and asymmetric objects
4.6 Introduction to non-Newtonian flow in pipes with a circular straight section. Potential law. Bingham plastic.
4.7 Examples of applications of food handling flows, flow in porous media, etc.
4.8. Practical cases

Specific objectives:

Related activities:
Theory lectures with examples and problems / applications
Activity 1 (active learning in the classroom)
Activity 2 (exercises / applications)
Activity 3 (self-learning questionnaires)
Activity 6 (final exam)
Activity 7 (lab/workshop final test)
Activity 10 (workshop III: flow with dominant viscosity in CFD with rectangular geometry)
Activity 11 (workshop IV: flow with dominant viscosity in CFD with circular geometry)

Full-or-part-time: 40h
Theory classes: 10h
Laboratory classes: 6h
Self study : 24h

Module 5: DIMENSIONLESS ANALYSIS

Description:
5.1. The laws of similarity (geometric, kinematic and dynamic)
5.2. Dimensional numbers
5.3. Theory models, design of experiments and the correlation of experimental data.
5.4. Examples of applications

Related activities:
Theory lectures with examples and problems / applications
Activity 1 (active learning in the classroom)
Activity 2 (exercises / applications)
Activity 3 (self-learning questionnaires)
Activity 6 (final exam)
Activity 7 (lab/workshop final test)
Activity 12 (workshop V: analysis and dimensionless numbers)
Activity 13 (workshop VI: similarity and model theory)

Full-or-part-time: 15h
Theory classes: 2h
Laboratory classes: 4h
Self study : 9h
Module 6: PUMP-PIPES FLUID SYSTEMS

Description:
8.1 Generalized Bernoulli equation
8.2 Pressure losses. Darcy-Weisbach, Moody, Friction Factor and Elements
8.3 System curve
8.4 Centrifugal pump performance curves
8.5 Centrifugal pump to system. Operating point
8.6 Flow control

Related activities:
Theory lectures with examples and problems / applications
Activity 1 (active learning in the classroom)
Activity 2 (exercises / applications)
Activity 3 (self-learning questionnaires)
Activity 6 (final exam)

Full-or-part-time: 7h 30m
Theory classes: 3h
Self study: 4h 30m

ACTIVITIES

ACTIVITY 1. ACTIVE LEARNING IN THE CLASSROOM

Description:
Active learning in the classroom in order to enhance motivation, reinforce critical thinking and activate learning, thus adapting to the specific needs of the classroom, among others, such as:
- Classic hobbies created by the ad-hoc teacher and delivered on photocopies / slides (word searches, crossword puzzles, the N differences, pairing, etc.)
- Multiplatform electronic mobile learning and gamification tools
- H5P interactive resources for web learning (open and completely free technology)
- Other tools and resources available

Material:
Photocopies, multiplatform tools, applications, interactive resources, etc.

Delivery:
The activities are carried out, commented and corrected in the classroom between students and between teacher and students. This activity does not have a direct specific weight in the overall grade of the course.

Full-or-part-time: 12h
Theory classes: 4h
Self study: 8h
ACTIVITY 2. PROBLEMS/APPLICATIONS

Description:
Basic exercises presented in the theoretical documentation of the subject. Problems and proposed applications to solve in class. The statements of the problems and applications are discussed, previously prepared by the instructor, in class.

Material:
Notes of the subject in ATENEA (learning management tool of the UPC based on Moodle).
Book of the subject at ATENEA.

Delivery:
The resolution of the problem must include the following sections: (a) Hypothesis, (b) Drawing of the scheme, (c) Basic principles, (d) Resolution, (e) Results, (f) Conclusions and (g) Explanation: within Each section should always include a small explanation to reason and argue the steps that have been taken.
This activity does not have a direct specific weight in the overall grade of the course.

Full-or-part-time: 18h
Theory classes: 10h
Self study: 8h

ACTIVITY 3. SELF-LEARNING QUESTIONNAIRES

Description:
Individual test questionnaires of conceptual exercises as part of autonomous learning.

Material:
Online questionnaires developed on the ATENEA platform of the subject (learning management tool of the UPC based on Moodle)

Delivery:
Each questionnaire is evaluated and its grade is part of the 10% corresponding to the final grade of the self-learning questionnaire tests.

Full-or-part-time: 18h
Theory classes: 10h
Self study: 8h

ACTIVITY 4. KNOWLEDGE CONTROL

Description:
Control type test carried out in class in pairs.

Material:
A4 crib sheet hand-made by the student.

Delivery:
The test is evaluated, and its grade has a weight of 5%, of the final grade for the course.

Full-or-part-time: 5h
Theory classes: 1h
Self study: 4h

ACTIVITY 8. WORKSHOP I: PROBLEM SOLVING STRATEGIES

Description:
Strategies, guides and guidelines in the process of solving calculation problems and fluid dynamic design.

Material:
Book of this subject in ATENEA (learning management tool of the UPC based on Moodle).

Delivery:
The correct delivery of the report is part of the 5% of the overall grade for the course, corresponding to the lab/workshop grade.

Full-or-part-time: 12h
Laboratory classes: 2h
Self study: 10h

ACTIVITY 9. WORKSHOP II: INTRODUCTION TO CFD

Description:
Practical workshop where the student is introduced to the Computational Fluid Dynamics (CFD) tools that will be used in the workshops.

Material:
CFD software.
Computer classroom.
Notes of the subject in ATENEA (learning management tool of the UPC based on Moodle).
Workshop script at ATENEA. The language of the workshop scripts is English.

Delivery:
The correct delivery of the report is part of the 5% of the overall grade for the course, corresponding to the lab/workshop grade.

Full-or-part-time: 3h 30m
Laboratory classes: 2h
Self study: 1h 30m

ACTIVITY 10. WORKSHOP III: FLOW WITH DOMINANT VISCOSITY IN CFD WITH RECTANGULAR GEOMETRY

Description:
Practical workshop with Computational Fluid Dynamics (CFD) software. Flow cases with dominant viscosity in rectangular geometries are simulated and the results are compared with the theoretical calculations from theory class and/or problem solving.

Material:
CFD software.
Computer classroom.
Notes of the subject in ATENEA (learning management tool of the UPC based on Moodle).
Workshop script at ATENEA. The language of the workshop scripts is English.

Delivery:
The correct delivery of the report is part of the 5% of the overall grade for the course, corresponding to the lab/workshop grade.

Full-or-part-time: 3h
Laboratory classes: 2h
Self study: 1h
ACTIVITY 11. WORKSHOP IV: FLOW WITH DOMINANT VISCOSITY IN CFD WITH CIRCULAR GEOMETRY

Description:
Practical workshop with Computational Fluid Dynamics (CFD) software. Flow cases with dominant viscosity in circular geometries are simulated and the results are compared with the theoretical calculations from theory class and/or problem solving.

Material:
CFD software.
Computer classroom.
Notes of the subject in ATENEA (learning management tool of the UPC based on Moodle).
Workshop script at ATENEA. The language of the workshop scripts is English.

Delivery:
The correct delivery of the report is part of the 5% of the overall grade for the course, corresponding to the lab/workshop grade.

Full-or-part-time: 3h
Laboratory classes: 2h
Self study: 1h

ACTIVITY 12. WORKSHOP V: ANALYSIS AND DIMENSIONLESS NUMBERS

Description:
Introduction to dimensional analysis.
Intervention through flipped learning in flipped classroom.

Material:
Detailed planning of the flipped learning in ATENEA (learning management tool of the UPC based on Moodle).
Notes of the subject in ATENEA
Specific ad-hoc materials of the workshop at ATENEA.

Delivery:
Online questionnaire in the classroom developed on the ATENEA platform of the subject.
The questionnaire is evaluated and its grade is part of the 5% of the overall grade for the course, corresponding to the laboratory/workshop practice grade.

Full-or-part-time: 3h 30m
Laboratory classes: 2h
Self study: 1h 30m
ACTIVITY 13. WORKSHOP VI: SIMILARITY AND MODEL THEORY

Description:
Once the dimensionless numbers have been identified, the similarity and model theory allows predicting the behavior of a prototype from the measurements made on the model.

Intervention through flipped learning in flipped classroom.

Material:
Detailed planning of the flipped learning in ATENEA (learning management tool of the UPC based on Moodle).
Notes of the subject in ATENEA
Specific ad-hoc materials of the workshop at ATENEA.

Delivery:
Online questionnaire in the classroom developed on the ATENEA platform of the subject.
The questionnaire is evaluated and its grade is part of the 5% of the overall grade for the course, corresponding to the laboratory/workshop practice grade.

Full-or-part-time: 3h 30m
Theory classes: 2h
Laboratory classes: 1h 30m

GRADING SYSTEM

1st Evaluation: midterm exam, weight: 30%
2nd Evaluation: final exam, weight: 40%
Questionnaires (type self-test individual), weight: 10%
Basic test, weight: 5%
Lab/Workshop sessions, weight: 5%
Lab/Workshop final test, weight: 10%

*The unsatisfactory results of the examination of the first mid-term, may be re-conducted only by students with a grade lower than 5. The second mid-term exam will be replaced by a final examination with the content of the whole subject of the course, with parts differentiated by terms. The final mark corresponding to the term exams (70%) will be the highest between the final examination and the weighting between the first mid-term exam and the parts of the second mid-term exam in the final examination.

EXAMINATION RULES.

Individual autotests as independent learning.
The exams consist of two exercises lasting approximately two hours.

*The unsatisfactory results of the examination of the first mid-term, may be re-conducted only by students with a grade lower than 5. The second mid-term exam will be replaced by a final examination with the content of the whole subject of the course, with parts differentiated by terms. The final mark corresponding to the term exams (70%) will be the highest between the final examination and the weighting between the first mid-term exam and the parts of the second mid-term exam in the final examination.
