Degree competences to which the subject contributes

Transversal:
1. TEAMWORK - Level 1. Working in a team and making positive contributions once the aims and group and individual responsibilities have been defined. Reaching joint decisions on the strategy to be followed.
The goals of this course are that:

1. The student must be able to code, test, and debug programs using the C language to solve elementary problems.

2. The student understands and masters the basics of procedural programming and uses the top-down design technique to solve the problems raised.

3. The student must understand what is about an operating system and its role on a computer functionality. He or She must know basic commands of a general purpose operating system.

Learning outcomes:

1. To Know the operation of a basic computer and how develop simple programs using it.

2. To use automatic tools for editing, compiling, running and debugging programs.

3. To correctly state the problem structure from a given problem description and identify alternative solutions.

4. To apply a suitable resolution choice and prove the correctness of that solution.

5. To know and correctly use the tools, instruments and applications, available at the lab, and properly achieve the analysis of the collected data.

6. To complete assigned tasks on a given schedule following the guidelines set by the course's profesor. The student must also be able to assess his or her work's progress, and the degree of fulfillment of this course's objectives.
