LEARNING OBJECTIVES OF THE SUBJECT

The aim of the course is for the student to learn or deepen in the most common techniques for voice and audio processing as well as their use in problems of analysis, classification, synthesis or other types of processing.

Learning Outcome:

The subject contributes to the learning outcome specifically in the aspect of audio and voice information processing:

It has the capacity to build, operate and manage telecommunications services and applications, understood as capture systems, analog and digital processing, encoding, transport, representation, processing, storage, reproduction, management and presentation of audiovisual services and multimedia information.

He is familiar with the analysis, specification, operation and maintenance of television and audio systems, equipment, headers and installations, both in fixed and mobile environments.

It is able to carry out projects of premises and facilities for the production and recording of audio signals.

It has the ability to create, encode, manage, disseminate and distribute multimedia content, meeting the criteria of usability and accessibility of audiovisual, broadcast and interactive services.

In teamwork, plan and agree on goals, operating rules, responsibilities, agenda, and work review procedure. Carry out the tasks based on the basic guidelines given by the teacher, deciding the time and resources needed. Assess your own strengths and weaknesses and act accordingly.
