Course guide
230075 - TCGI - Internet Transport, Control and Management

Unit in charge: Barcelona School of Telecommunications Engineering
Teaching unit: 744 - ENTEL - Department of Network Engineering.

Degree: BACHELOR’S DEGREE IN TELECOMMUNICATIONS TECHNOLOGIES AND SERVICES ENGINEERING (Syllabus 2015). (Optional subject).

Academic year: 2023  ECTS Credits: 6.0  Languages: Catalan, Spanish

LECTURER

Coordinating lecturer: Consultar aquí / See here:
https://telecos.upc.edu/ca/estudis/curs-actual/professorat-responsables-coordinadors/responsables-assignatura

Others: Consultar aquí / See here:
https://telecos.upc.edu/ca/estudis/curs-actual/professorat-responsables-coordinadors/professorat-assignat-idioma

PRIOR SKILLS

Basic Linux.

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Transversal:
06 URI N3. EFFECTIVE USE OF INFORMATION RESOURCES - Level 3. Planning and using the information necessary for an academic assignment (a final thesis, for example) based on a critical appraisal of the information resources used.

TEACHING METHODOLOGY

Guided activities
lectures
Laboratory Classes
Individual work (distance learning)
Short answer tests (Control)
Multiple choice tests
Laboratory practices
LEARNING OBJECTIVES OF THE SUBJECT

The goal of this course is to teach the most relevant aspects concerning routing protocols, transport and control in telecommunications networks, in particular, in the Internet. Based on the knowledge about static routing acquired in previous courses, will present the different algorithms and dynamic routing protocols, both unicast and multicast. In addition, we will discuss certain protocols necessary for the Internet operation and some typical applications such as WWW.

Learning outcomes:

- It has capacity to build, operate and manage networks, services, processes and telecommunications applications from the point of view of telematic services.
- Is able to apply the techniques of switching and routing in fixed and mobile environments.
- Understands and applies the most appropriate protocols to transport information correctly and keep the sessions during transmission.
- Use the tools necessary to easily build, operate and manage ICT services, especially those related to the Internet, web and multimedia.
- Be familiar with the protocols and communication interfaces at different levels of the network architecture and be able to describe them, program them, validate them and optimize them.
- Know the technological progress of transmission, switching and the process to improve networks and online services.
- Design and implement a good strategy for searching specialized information. Identify the relevance and quality of this information.
- Perform tasks based on the guidelines set by the teacher, taking the time and the resources necessary. Assesses own strengths and weaknesses and act accordingly.

Total learning time: 150 h

CONTENTS

Chapter 1. Switching review

Description:
Basic switching concepts review. Switches, spanning tree and VLANs with Linux.

Related activities:
Laboratory practice. Evaluation of the practice.

Full-or-part-time: 10h
Theory classes: 3h
Laboratory classes: 2h
Self study: 5h
<table>
<thead>
<tr>
<th>Chapter 2. IP Review</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Description:</strong> IP basics review and static routing.</td>
</tr>
<tr>
<td><strong>Related activities:</strong> Laboratory practice. Evaluation of the practice.</td>
</tr>
<tr>
<td><strong>Full-or-part-time:</strong> 10h</td>
</tr>
<tr>
<td>Theory classes: 3h</td>
</tr>
<tr>
<td>Laboratory classes: 2h</td>

### Chapter 6. Firewalls and address translation

**Description:**
Firewall rules with iptables and dynamic address translation (NAT).

**Related activities:**
Laboratory practice. Evaluation of the practice.

**Full-or-part-time:** 10h
- Theory classes: 3h
- Laboratory classes: 2h
- Self study: 5h

### Chapter 7. Tunnels

**Description:**
Description of networking technologies for tunnels.

**Related activities:**
Laboratory practice. Evaluation of the practice.

**Full-or-part-time:** 9h
- Theory classes: 1h 30m
- Laboratory classes: 3h
- Self study: 4h 30m

### Chapter 8. Multicast

**Description:**
Description of multicast technologies.

**Related activities:**
Laboratory practice. Evaluation of the practice.

**Full-or-part-time:** 10h
- Theory classes: 2h
- Laboratory classes: 3h
- Self study: 5h

### Chapter 9. Unicast dynamic routing

**Description:**
Algorithms of shortest path Bellman-Ford and Dijkstra. Protocols RIP, OSPF, BGP and MPLS.

**Related activities:**
Laboratory practice. Evaluation of the practice.

**Full-or-part-time:** 36h
- Theory classes: 12h
- Laboratory classes: 6h
- Self study: 18h
Chapter 10. Introduction to IPv6

Description:
Introduction to IPv6

Full-or-part-time: 12h
Theory classes: 6h
Self study: 6h

ACTIVITIES

Laboratory exam with short answers

Description:
Partial exam of laboratory

Full-or-part-time: 1h
Laboratory classes: 1h

Final exam

Description:
Final exam

Full-or-part-time: 2h
Theory classes: 2h

GRADING SYSTEM

7 Test assessments: 10% x 7 = 70%
Laboratory control: 30%
