ELECTROMAGNETISM - Precorequisite

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Generical:
12 CPE N2. They will be able to identify, formulate and solve engineering problems in the ICC field and will know how to develop a method for analysing and solving problems that is systematic, critical and creative.

TEACHING METHODOLOGY

Most of lessons will be given on the blackboard, and others with multimedia material.

LEARNING OBJECTIVES OF THE SUBJECT

It is intended that students acquire a solid basis, both visual and mathematical, of the phenomena associated with the propagation of electromagnetic waves in free space, of reflection and transmission on separating surfaces of different media, and of their propagation through waveguides, optical fibers and transmission lines.
