

## 230260 - PAESTLC - Advanced Project in Telecommunication Systems Engineering

Coordinating unit:	230 - ETSETB - Barcelona School of Telecommunications Engineering
Teaching unit:	739 - TSC - Department of Signal Theory and Communications
Academic year:	2019
Degree:	BACHELOR'S DEGREE IN TELECOMMUNICATIONS TECHNOLOGIES AND SERVICES ENGINEERING (Syllabus 2015). (Teaching unit Optional)
ECTS credits:	12
Teaching languages:	Catalan, Spanish, English

### Teaching staff

Coordinator: Camps Carmona, Adriano

### Prior skills

You must have passed Basic Engineering Project  
You must have passed Economics and Business

### Degree competences to which the subject contributes

Generical:

11 CDIO N3. They will be able to apply a comprehensive view of the entire life cycle (conception, design, implementation and operation) of a product, process or service in the ICC field, and identify users' needs and develop a set of requirements for the product, process or service and a set of initial specifications. They will be able to explore possible solutions and select the best one. They will be able to carry out a design process following a standardised methodology. They will know how to evaluate and propose improvements to the design. They will take into account economic and social aspects of the project or product.

Transversal:

1. ENTREPRENEURSHIP AND INNOVATION - Level 3. Using knowledge and strategic skills to set up and manage projects. Applying systemic solutions to complex problems. Devising and managing innovation in organizations.
2. SUSTAINABILITY AND SOCIAL COMMITMENT - Level 3. Taking social, economic and environmental factors into account in the application of solutions. Undertaking projects that tie in with human development and sustainability.

### Teaching methodology

Directed activities

Lectures

Team work (autonomous learning)

Homework (individual autonomous learning)

oral presentation

Short answer tests (Control)

Long answer test (Final Exam)

### Learning objectives of the subject

The course aims to achieve a double impact:

1. Consolidation and extension of the content of previous or parallel courses
2. Acquisition of generic skills at an advanced level. The course deals with almost all generic skills, with emphasis on:
  - Teamwork, leadership
  - Oral and written communication

## 230260 - PAESTLC - Advanced Project in Telecommunication Systems Engineering

- Communication in 3rd language (English)
- Entrepreneurship and innovation
- Sustainability and social commitment
- Ability to conceive, design, implement and operate complex systems in the ICT field

### Learning outcomes:

Depending on the subject and scope of the project presented in this course, the student achieves the following learning outcomes:

Is able to build, operate and manage the telecommunication networks, services, processes and applications, that is systems for acquisition, transport, representation, processing, storage, management and presentation of multimedia information from the point of view of transmission systems.

Is able to apply the techniques in which telecommunication networks, services and applications are based, both in fixed and mobile environments, being personal, local or long distance, with different bandwidths, including telephone, radio, television and data from the point of view of the transmission systems.

Is able to analyze components and their specifications for guided and non-guided communications systems.

Is able to select circuits, subsystems and systems of radiofrequency, microwaves, broadcast, and radiodetermination.

Is able to select antennas, transmission equipment and systems, propagation of guided and non-guided waves by electromagnetic means, both radiofrequency and optical. Also to manage and allocate radio spectrum frequencies.

Is able of analyzing, coding, processing and transmitting multimedia information using analog and digital signal processing techniques.

Takes initiatives that create new opportunities and solutions with vision of implementation, process and market

Uses knowledge and strategic skills to create and manage projects with an innovative approach. Applies systemic solutions to complex problems.

Applies sustainability criteria and ethic codes of the profession in designing and evaluating technologic solutions.

Identifies the need for legislation, regulations and standards.

Understands the concept of life cycle of a product and applies it to the development of ICT products and services, using suitable standards and legislation.

Studies with books and articles in English and writes a report in English and participates in a technical meeting conducted in that language.

Conducts an oral presentation in English and answers questions from the audience.

Uses strategies to prepare and carry out oral and written texts and documents with consistent content, structure and style, appropriate level and good spelling and grammar.

Communicates clearly and effectively in oral and written presentations on complex subjects, adapting to the situation, to the audience and to the objectives of the communication.

Plans and reaches agreements on the objectives, operating rules, responsibilities, schedule and review procedures work.

Identifies the roles, skills and shortcomings of the different group members, recognizing and / or assuming the role of leader. Negotiates and manages conflicts within the group.

Identifies user needs and develops a definition of product-process-service and its initial specifications. Follows the process management model based on a standard. Evaluates the application of laws and regulations that apply.

Identifies needs and market opportunities. Collects information that would allow elaborating specifications for a new product, process or service. Elaborates a basic business plan.

## 230260 - PAESTLC - Advanced Project in Telecommunication Systems Engineering

### Study load

Total learning time: 326h	Hours large group:	26h	7.98%
	Hours small group:	78h	23.93%
	Self study:	222h	68.10%

## 230260 - PAESTLC - Advanced Project in Telecommunication Systems Engineering

### Content

Lectures	Learning time: 35h 20m Theory classes: 15h 20m Self study : 20h
Description: Specific aspects of economics and business. Business plan. Regulations Contents related to the specific project	
Seminars:	Learning time: 22h 30m Theory classes: 10h Self study : 12h 30m
Description: Critical thinking System thinking Research in specialized databases of business information Research in specialized databases of patents Patent preparation strategy Teamwork, leadership Environmental impact Advanced project management methodology	
Specific math concepts	Learning time: 37h 30m Theory classes: 16h 30m Self study : 21h
Description: Additional math content for the specific projects developed in this course: statistics, optimization, modeling, numerical calculation.	

## 230260 - PAESTLC - Advanced Project in Telecommunication Systems Engineering

Project	Learning time: 234h 40m Guided activities: 99h 10m Self study : 135h 30m
<p>Description:</p> <p>Project with high technical complexity, carried out by a large group of people (9-12) that divide the work into subgroups (3-4) and which are coordinated at different levels.</p> <ul style="list-style-type: none"> <li>- Each degree performs a different project and there may be different projects within the same degree, with the possibility of transversal projects between tracks and between degrees</li> <li>- Incorporates different parts (theoretical, HW, SW, measures economic study ...)</li> <li>- Projects with different profiles, focusing on a specific aspect (Research, Technical Development, Economic study / business plan)</li> </ul> <p>Examples of possible topics:</p> <ul style="list-style-type: none"> <li>- Telemedicine - biomedical sensor - communications link - Database</li> <li>- Payload for a picosatellite</li> <li>- Coin Sorter</li> <li>- Fleet Management (GPS, communications, databases, maps)</li> <li>- Access control: card readers, LAN, DB</li> <li>- Viterbi decoder chip</li> <li>- RFID</li> <li>- Monitoring system for endangered species</li> <li>- System for remote relay</li> <li>- Internet TV</li> </ul>	

### Planning of activities

(ENG) Presentació oral

(ENG) Presentació oral

(ENG) Proves de resposta curta (Control)

(ENG) Proves de resposta llarga (Examen Final)

## 230260 - PAESTLC - Advanced Project in Telecommunication Systems Engineering

### Qualification system

- Continuous assessment of the activities carried out in the case studies of training sessions and seminars
- Continuous assessment, documentation and oral presentation of the project reports.
- Cross-assessment and co-assessment of the project

60% of the score corresponds to the project mark

40% of the score is based on the individual assessment of the evidences collected at the progress meetings, seminars and the co-assessment of the team colleagues

This course will assess at least the following generic skills:

- Entrepreneurship and innovation (high)
- Sustainability and social commitment (high)
- Ability to conceive, design, implement and operate complex systems in the field of ICT (High Level)

### Regulations for carrying out activities

A clear failure performing the tasks assigned by the team can mean the failure of the course regardless of the grade given to the group project

### Bibliography
