- Giró Nieto, Xavier
- Vilaplana Besler, Veronica
- Morros Rubio, Josep Ramon
- Ruiz Hidalgo, Javier

### Prior skills

It is advisable to have some background in machine learning. Students will also develop their projects in Python, so previous contact with this language is recommended.

### Degree competences to which the subject contributes

**Specific:**
- CE1. Ability to apply information theory methods, adaptive modulation and channel coding, as well as advanced techniques of digital signal processing to communication and audiovisual systems.

**Transversal:**
- CT3. TEAMWORK: Being able to work in an interdisciplinary team, whether as a member or as a leader, with the aim of contributing to projects pragmatically and responsibly and making commitments in view of the resources that are available.
- CT4. EFFECTIVE USE OF INFORMATION RESOURCES: Managing the acquisition, structuring, analysis and display of data and information in the chosen area of specialisation and critically assessing the results obtained.
- CT5. FOREIGN LANGUAGE: Achieving a level of spoken and written proficiency in a foreign language, preferably English, that meets the needs of the profession and the labour market.
The aim of this course is to train students in methods of deep learning. Recurrent Neural Networks (RNN) will be presented and analyzed in detail to understand the potential of these state of the art tools for time series processing. Engineering tips and scalability issues will be addressed to solve tasks such as classification and regression. Hands-on sessions will provide development skills so that attendees can become competent in contemporary data analytics tools.
