Course guides
230455 - CAL2 - Calculus 2

Unit in charge: Barcelona School of Telecommunications Engineering
Teaching unit: 749 - MAT - Department of Mathematics.
Degree: BACHELOR’S DEGREE IN ENGINEERING PHYSICS (Syllabus 2011). (Compulsory subject).
Academic year: 2020 ECTS Credits: 6.0 Languages: Spanish

LECTURER
Coordinating lecturer: NARCISO ROMÁN ROY
Others: Andrés M. Encinas Bachiller

PRIOR SKILLS
Knowledge of notions and methods of one-variable-calculus and linear algebra

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Specific:
3. Ability to solve math problems that may arise in engineering. Ability to apply knowledge about linear algebra, geometry, differential geometry, differential and integral calculus, ordinary and partial differential equations, probability and statistics.
4. Ability to select numerical and optimization methods suitable for solving physical and engineering problems. Ability to apply the knowledge of numerical algorithms and optimization.

General:
2. ABILITY TO IDENTIFY, FORMULATE, AND SOLVE PHYSICAL ENGINEERING PROBLEMS. Planning and solving physical engineering problems with initiative, making decisions and with creativity. Developing methods of analysis and problem solving in a systematic and creative way.

Transversal:
1. SELF-DIRECTED LEARNING - Level 1. Completing set tasks within established deadlines. Working with recommended information sources according to the guidelines set by lecturers.

TEACHING METHODOLOGY

· Presentality: 2.6 ECTS
  Showroom (theory + problems) with student participation.
  Practical work individually or in teams. Tutoring

Do not presentality: 3.4 ECTS
Exercises and theoretical or practical projects outside the classroom
Preparation and measurable activities.
LEARNING OBJECTIVES OF THE SUBJECT

The first objective of this course is extending to functions of several variables the concepts learned in the course of Calculus I, for one variable functions. In particular we study the concepts of differentiability of functions of several variables, multiple integration, and integration on curves and surfaces and their applications to physics and engineering.

It also introduces basic concepts of geometry such as curves and surfaces, with the aim of studying the fundamental theorems of vector analysis, theorems of Green, Stokes and Gauss. These theorems are the theoretical study of electromagnetic fields.

Learning Outcome:
- Domain solving math problems that may arise in physics, and the ability to apply their knowledge of geometry, vector analysis, differential and integral calculus (several variables).
- Use the resources and services available to run simple searches. Classifies and summarizes the information gathered.
- Carries out the tasks on schedule, according to the guidelines set by the teacher or tutor.
- It raises the problem correctly from the proposed language and identify options for resolution.
- Apply the appropriate solution method and identifies the correct solution.
- Identify, model and poses problems from open situations. Explore and implement alternatives for resolution. Known approximations.

CONTENTS

**Topology. Limits and continuity of functions of several variables.**

Description:
Vector sequences.
Functions of several variables. Level sets. Limits. Continuity.

Full-or-part-time: 11h 30m
- Theory classes: 3h 30m
- Practical classes: 2h 15m
- Self study: 5h 45m

**Differentiability of functions of several variables.**

Description:

Full-or-part-time: 32h 20m
- Theory classes: 7h 45m
- Practical classes: 5h 35m
- Self study: 19h
**Taylor's formula.**

**Description:** Higher-order derivatives. Taylor's theorem. Applications.

**Full-or-part-time:** 12h 55m
- Theory classes: 4h 05m
- Practical classes: 2h 10m
- Self study: 6h 40m

**Applications of differential calculus: Extremals. Differential operators. Curves and surfaces.**

**Full-or-part-time:** 23h
- Theory classes: 5h 50m
- Practical classes: 4h 25m
- Self study: 12h 45m

**Multiple integrals.**

**Description:** Double and triple integrals. Definition of integral (Riemann). Fubini theorem. Change of variable. Functions defined by integrals and derivation under the integral sign. Improper integrals. Applications.

**Full-or-part-time:** 27h 30m
- Theory classes: 6h 05m
- Practical classes: 4h 55m
- Self study: 16h 30m

**Integrals along curves and integrals on surfaces.**

**Full-or-part-time:** 16h 10m
- Theory classes: 4h 40m
- Practical classes: 3h 10m
- Self study: 8h 20m
Theorems of vector calculus.

Description:
Theorems of Green, Stokes and Gauss-Ostrogradski. Applications.

Full-or-part-time: 26h 35m
Theory classes: 7h 05m
Practical classes: 4h 30m
Self study : 15h

GRADING SYSTEM

The rating will consist of a final exam (FE) and an evaluation along the course that will take into account the implementation of a mid-term exam (EP).
The final rating will be given by
max \{EF, 0.60 \ast EF + 0.40 \ast EP\}
