230456 - MM1 - Mathematical Methods 1

Coordinating unit: 230 - ETSETB - Barcelona School of Telecommunications Engineering
Teaching unit: 749 - MAT - Department of Mathematics
Academic year: 2019
Degree: BACHELOR'S DEGREE IN ENGINEERING PHYSICS (Syllabus 2011). (Teaching unit Compulsory)
ECTS credits: 6 Teaching languages: Catalan, Spanish

Teaching staff

Coordinator: RAFAEL RAMÍREZ ROS

Others: José Tomás Lázaro Ochoa, Jordi Villanueva Castelltort

Opening hours

Timetable: Send an e-mail to the professor to make an appointment

Prior skills

Calculus of one variable (derivatives, integrals, and power series), and linear algebra (linear maps and diagonalization).

Degree competences to which the subject contributes

Specific:
1. Ability to solve math problems that may arise in engineering. Ability to apply knowledge about linear algebra, geometry, differential geometry, differential and integral calculus, ordinary and partial differential equations, probability and statistics.
2. Ability to select numerical and optimization methods suitable for solving physical and engineering problems. Ability to apply the knowledge of numerical algorithms and optimization.

Generical:
3. ABILITY TO IDENTIFY, FORMULATE, AND SOLVE PHYSICAL ENGINEERING PROBLEMS. Planning and solving physical engineering problems with initiative, making decisions and with creativity. Developing methods of analysis and problem solving in a systematic and creative way.

Transversal:
4. EFFECTIVE USE OF INFORMATI0N RESOURCES - Level 1. Identifying information needs. Using collections, premises and services that are available for designing and executing simple searches that are suited to the topic.

Teaching methodology

Five hours per week of class attendance. Realization of an optional work about a free topic.

Learning objectives of the subject

At the end of the course, the student should be able: 1) To solve several simple ODEs (first-order linear ODEs, separable ODEs, exact ODEs, n-th order linear ODEs with constant coefficients, etc.); 2) To solve linear ODEs by using the Laplace transform; 3) To solve (and to draw the phase portrait of) 2D and 3D systems of linear ODEs with constant coefficients; 4) To draw local and global phase portraits of 2D and 3D systems of nonlinear ODEs; and 5) To model physical, chemical, biological, and geometrical problems with ODEs.

230456 - MM1 - Mathematical Methods 1

Study load

Total learning time: 150h	Hours large group:	65h	43.33%
	Self study:	85h	56.67%

230456 - MM1 - Mathematical Methods 1

Content

Solving first-order ODEs	Learning time: 29h Practical classes: 12h Self study : 17h

Description:
First-order EDOs: separable, linear, Bernoulli, Ricatti, exact, etc. Applications: snow plow, radioactive decay, Newton's law of cooling,Torricelli's law, logistic equation, etc.

Systems of linear ODEs	Learning time: 41h Theory classes: 18h Self study : 23h

Description:
Resolution and classification of systems of linear EDOs to constant coefficients. Applications: Problems of connected deposits, connected spring problems, Wilberforce pendulum, etc.

Laplace Tranaform	Learning time: 16h Practical classes: 7h Self study : 9h

Description:
Definition and computation of Laplace transforms. Application to solving linear ODEs. Dirac's delta.

Systems of nonlinear ODEs	Learning time: 48h Theory classes: 21h Self study : 27h

Description:
Case 1D: Phase portraits and bifurcation diagrams. Case 2D: Isoclines, separatrices, limit cycles, trap regions, etc. 3D case: Chaos. Stability of equilibrium points by linearization and by Liapunov. Applications: Pursuit trajectories, biological models, conservative systems with one degree of freedom, pendulum problems, tennis racket theorem, etc.

n-th order linear ODEs	Learning time: 16h Practical classes: 7h Self study : 9h
Description: Homogeneous linear EDOs with constant coefficients: The characteristic polynomial. Non-homogeneous linear EDOs with constant coefficients: Indeterminate coefficients and variation of constants. Applications: Oscillations, spring problems, etc.	

Qualification system

A partial exam, a final exam, and an optional work. The final grade is

FG = min(10, max(FE , 0.3*PE + 0.7*FE) + 0.1*W),

where PE is the grade of the partial exam, FE is the grade of the final exam, and W is the grade of the work.

Regulations for carrying out activities

The student can use a sheet of paper (DIN A4 size) written by hand and a list of Laplace transforms. The use of calculators, cellulars or any programable digital device is forbidden.
