230470 - ONEMAG - Electromagnetic Waves

Coordinating unit: 230 - ETSETB - Barcelona School of Telecommunications Engineering
Teaching unit: 739 - TSC - Department of Signal Theory and Communications
Academic year: 2019
Degree: BACHELOR’S DEGREE IN ENGINEERING PHYSICS (Syllabus 2011). (Teaching unit Compulsory)
ECTS credits: 6  Teaching languages: Catalan, Spanish, English

Teaching staff
Coordinator: VICTOR FEDERICO DIOS OTIN
Others: JUAN-MANUEL RIUS CASALS

Opening hours
Timetable: By appointment

Prior skills
Foundations on Electricity and Magnetism, both in free space and in dielectric and magnetic media. Waves, vectorial analysis and ordinary differential equations

Requirements
The course of Electromagnetism.

Degree competences to which the subject contributes
Specific:
1. Knowledge of electromagnetism laws. Ability to solve engineering problems: magnetism, electricity and electrical technology, electromagnetic waves and wave optics.
2. Knowledge of the mechanisms of propagation and transmission of electromagnetic waves. Ability to analyze and use transmitter and receiver devices.

Generical:
1. ABILITY TO IDENTIFY, FORMULATE, AND SOLVE PHYSICAL ENGINEERING PROBLEMS. Planning and solving physical engineering problems with initiative, making decisions and with creativity. Developing methods of analysis and problem solving in a systematic and creative way.

Transversal:
2. SELF-DIRECTED LEARNING - Level 3. Applying the knowledge gained in completing a task according to its relevance and importance. Deciding how to carry out a task, the amount of time to be devoted to it and the most suitable information sources.

Teaching methodology
The main weight of the course is set on the theory and problems sessions, without forgetting the important practical applications of the subject. The MODDLE platform is used as the usual communication mean with the students.

Learning objectives of the subject
The main goal is provide students with a clear insight, visual and also mathematic, about the phenomena associated with wave propagation, in free space and through transmission line of any type.
### Study load

# 230470 - ONEMAG - Electromagnetic Waves

## Content

<table>
<thead>
<tr>
<th>1. Electromagnetic waves in free space</th>
<th>Learning time: 30h</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Theory classes: 7h</td>
</tr>
<tr>
<td></td>
<td>Practical classes: 5h</td>
</tr>
<tr>
<td></td>
<td>Guided activities: 2h</td>
</tr>
<tr>
<td></td>
<td>Self study: 16h</td>
</tr>
</tbody>
</table>

**Description:**
- 1.1 Wave equation. Wave functions.
- 1.2 Plane waves and spherical waves.
- 1.3 Plane waves in steady sinusoidal state. Uniform and non-uniform plane waves. Wave impedance.
- 1.4 Power and power density associated at the wave.
- 1.5 Polarization. Types of polarization. Elements for the control of polarization: polarizer and retarder plates.
- 1.6 Plane waves in lossy media.

<table>
<thead>
<tr>
<th>2. Incidence of waves in separation surfaces</th>
<th>Learning time: 30h</th>
</tr>
</thead>
<tbody>
<tr>

<tr>
<td></td>
<td>Self study: 18h</td>
</tr>
</tbody>
</table>

**Description:**
- 2.2 Total reflection.
- 2.3 Standing waves. Totally and partially standing waves. Standing wave ratio. Anti-reflection coatings.
### 3. Transmission lines

**Description:**
- 3.1 Introduction: problems in circuit theory associated to high frequencies. Necessity of a new formulation. Types of transmission lines.
- 3.2 TEMz waves in a transmission line of two conductors. Telegraphist’s equation.
- 3.3 Model of distributed parameters. Circuit parameters per unit length.
- 3.4 Wave propagation in a transmission line. Propagation velocity and characteristic impedance.
- 3.5 Terminated transmission line without losses. Reflection coefficient, standing wave ratio and input impedance.
- 3.6 Generator and load mismatching. Power transmission and conjugated impedance matching.
- 3.7 Losses in transmission lines.

**Learning time:** 26h
- Theory classes: 7h
- Practical classes: 4h
- Guided activities: 1h
- Self study: 14h

### 4. Waveguides and optical fibers

**Description:**
- 4.1 Waveguides with conducting walls
- 4.2 Rectangular conducting waveguides
  Propagation modes. Dispersion curves. Transmitted power.
- 4.3 Resonators
- 4.4 Plane dielectric waveguides
  Guided and radiation modes.

**Learning time:** 32h
- Theory classes: 9h
- Practical classes: 5h
- Self study: 18h
The final mark is given by three figures: the final exam (EF), the middle term exam (EP) and the evaluation of specific works realized during the course (TE).

The final mark is given by: \[ \text{Max} \{0.90 \times \text{EF} + 0.10 \times \text{TE}, \ 0.55 \times \text{EF} + 0.35 \times \text{EP} + 0.10 \times \text{TE} \} \]

### Qualification system

The final mark is given by three figures: the final exam (EF), the middle term exam (EP) and the evaluation of specific works realized during the course (TE).

The final mark is given by: \[ \text{Max} \{0.90 \times \text{EF} + 0.10 \times \text{TE}, \ 0.55 \times \text{EF} + 0.35 \times \text{EP} + 0.10 \times \text{TE} \} \]
