230474 - TS - Signal Theory

Coordinating unit: 230 - ETSETB - Barcelona School of Telecommunications Engineering
Teaching unit: 739 - TSC - Department of Signal Theory and Communications
Academic year: 2019
Degree: BACHELOR'S DEGREE IN ENGINEERING PHYSICS (Syllabus 2011). (Teaching unit Compulsory)
ECTS credits: 6
Teaching languages: Catalan, Spanish, English

Teaching staff
Coordinator: Pascual Iserte, Antonio
Others: Rey Nicolau, Francesc

Opening hours
Timetable: To be agreed with the lecturer

Prior skills
- Fundamental algebra and calculus: complex numbers, matrix algebra, eigen-decomposition, fundamental calculus (limits, derivation, integration, series), multi-variable functions, conditioned optimization (Lagrange multipliers).
- Probability and statistics: random variables and processes, mean, variance, stationarity.
- Linear circuits analysis: Laplace transform, network function, convolution, stability, sinusoidal steady-state analysis, filters and frequency analysis.

Degree competences to which the subject contributes

Specific:
1. Understanding and mastering the basic concepts of linear systems, and functions and their transforms in the continuous and discrete domains. Ability to analyze signals with noise, applying the Wiener-Khinchin theorem and calculate the averaged power spectrum. Ability to sample and filter signals.

General:
9. ABILITY TO IDENTIFY, FORMULATE, AND SOLVE PHYSICAL ENGINEERING PROBLEMS. Planning and solving physical engineering problems with initiative, making decisions and with creativity. Developing methods of analysis and problem solving in a systematic and creative way.

Transversal:
2. ENTREPRENEURSHIP AND INNOVATION - Level 1. Showing enterprise, acquiring basic knowledge about organizations and becoming familiar with the tools and techniques for generating ideas and managing organizations that make it possible to solve known problems and create opportunities.
3. SUSTAINABILITY AND SOCIAL COMMITMENT - Level 3. Taking social, economic and environmental factors into account in the application of solutions. Undertaking projects that tie in with human development and sustainability.
4. THIRD LANGUAGE. Learning a third language, preferably English, to a degree of oral and written fluency that fits in with the future needs of the graduates of each course.
5. EFFICIENT ORAL AND WRITTEN COMMUNICATION - Level 2. Using strategies for preparing and giving oral presentations. Writing texts and documents whose content is coherent, well structured and free of spelling and grammatical errors.
6. TEAMWORK - Level 2. Contributing to the consolidation of a team by planning targets and working efficiently to favor communication, task assignment and cohesion.
7. EFFECTIVE USE OF INFORMATION RESOURCES - Level 3. Planning and using the information necessary for an
Learning objectives of the subject

- To understand the basic concepts related with signals and systems in the time domain both for the case of continuous time and discrete time.
- To understand and be able to use the main transformations for the case of continuous time (Laplace, Fourier) and discrete time (Z, Fourier, DFT) and their application to signals and frequency response of systems.
- To be able to characterize the A/D and D/A conversion processes.
- To be able to characterize stochastic processes.
- To understand the fundamentals of estimation theory in terms of the characterization of estimators for the two main families: classical and Bayesian estimation.
- To understand the fundamentals of non-parametric and parametric spectral estimation.
- To understand the fundamentals and the main applications of Wiener filtering.

## 3. A/D AND D/A CONVERSION

**Description:**
3.1. Sampling and alias generation: antialiasing filter.
3.2. Quantization noise.
3.3. Change of the sampling frequency: decimation and interpolation.
3.4. Signal reconstruction: ideal and zero-order hold (ZOH) interpolators

**Related activities:**
Theoretical lectures and exercises at class.
One session of 2 hours in the lab.

**Specific objectives:**
To be able to characterize the A/D and D/A conversion processes.

## 4. STOCHASTIC PROCESSES - RANDOM SIGNALS

**Description:**
4.3. Ergodicity in mean and correlation.
4.5. Filtering of random signals.
4.6. Gaussian processes.

**Related activities:**
Theoretical lectures and exercises at class.

**Specific objectives:**
To be able to characterize stochastic processes.

5.- FUNDAMENTALS OF ESTIMATION THEORY

Description:
5.1.- Introduction to estimation theory:
   5.1.1.- definition of estimator
   5.1.2.- quality criteria: bias, variance, mean square error (MSE), consistency
   5.1.3.- example: estimation of the mean of a process
5.2.- Classical estimation theory:
   5.2.1.- minimum variance unbiased estimator (MVUE)
   5.2.2.- efficient estimators: Cramer-Rao bound
   5.2.3.- maximum likelihood (ML) estimation
5.3.- Bayesian estimation theory:
   5.3.1.- parameter characterization: prior distribution
   5.3.2.- Bayesian risk: maximum-a-posteriori (MAP), posterior mean, posterior median estimators

Related activities:
Theoretical lectures and exercises at class.
One session of 2 hours in the lab.

Specific objectives:
To understand the fundamentals of estimation theory in terms of the characterization of estimators for the two main families: classical and Bayesian estimation.

Learning time: 25h
   Theory classes: 6h
   Practical classes: 2h
   Laboratory classes: 2h
   Guided activities: 1h
   Self study: 14h
6. SPECTRAL ESTIMATION

**Description:**
6.1. Non-parametric spectral estimation:
   6.1.1. periodogram: bias (leakage), variance, and consistency
   6.1.2. smoothing the periodogram through windowing (Blackman-Tukey): Bartlett, Hamming, Kaiser, Blackman, etc.
   6.1.3. Bartlett-Welch spectral estimation techniques: average of periodograms
   6.1.4. estimators based on bank of matched filters (Capon)
6.2. Parametric spectral estimation:
   6.2.1. linear models of processes: AR, MA, ARMA
   6.2.2. Yule-Walker equations

**Related activities:**
Theoretical lectures and exercises at class.
One session of 2 hours in the lab.

**Specific objectives:**
To understand the fundamentals of estimation theory in terms of the characterization of estimators for the two main families: classical and Bayesian estimation.

7. OPTIMAL WIENER FILTERING

**Description:**
7.1. Linear Bayesian estimator of minimum MSE.
7.3. Adaptive implementation (steepest descent-SD, least mean square-LMS, normalized LMS-NLMS).
7.4. Linear predictors. Examples.

**Related activities:**
Theoretical lectures and exercises at class.
One session of 2 hours in the lab.

**Specific objectives:**
To understand the fundamentals and the main applications of Wiener filtering.
Qualification system

The evaluation will be based on the following three items:

- PE: partial exam
- FE: final exam (including all the contents of the course)
- LS: lab sessions

The final score will follow from

Final mark = \max \{ 0.60 \times FE + 0.25 \times PE + 0.15 \times LS , 0.85 \times FE + 0.15 \times LS \}

Only when the final mark is not passed in the ordinary call, an extraordinary exam (EE) will be carried out including all the contents of the course. In this case, the final mark will be calculated as follows, where it is taken into account that the 15% corresponding to the lab sessions (LS) cannot be re-evaluated:

Final mark = \max \{ 0.60 \times FE + 0.25 \times PE + 0.15 \times LS , 0.85 \times FE + 0.15 \times LS , 0.85 \times EE + 0.15 \times LS \}

Regulations for carrying out activities

The rules to be applied in the exams will be specified in the calls for the exams.
