Course guide
240131 - 240131 - Differential Equations

Unit in charge: Barcelona School of Industrial Engineering
Teaching unit: 749 - MAT - Department of Mathematics.
Degree: BACHELOR'S DEGREE IN INDUSTRIAL TECHNOLOGY ENGINEERING (Syllabus 2010). (Compulsory subject).
Academic year: 2022  ECTS Credits: 6.0  Languages: Catalan, Spanish

LECTURER
Coordinating lecturer: PERE GUTIERREZ SERRES
Others:

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES
Specific:
1. Capacity to solve mathematical problems that can appear in engineering. Aptitude to apply knowledge about: linear algebra; geometry; differential geometry; differential and integral calculus; differential equations and derived partial equations; numerical methods; numerical algorithm; statistics and optimisation.

TEACHING METHODOLOGY
There are 2 hours per week of "magistral lectures" (exposition of theoretical aspects), and 2 hours per week of "problem solving".

LEARNING OBJECTIVES OF THE SUBJECT
At the end of the course, students should be able:
* to apply the fundamental theorems of Vector Calculus
* to solve, classify and draw the phase portrait of 2D and 3D systems of linear ODEs with constant coefficients
* to use the tools to determine the stability in some systems of nonlinear ODEs
* to solve some basic PDEs (wave, heat, Laplace/Poisson, etc)
* to use sofware in order to obtain numerical approximations in problems from the previous items

## CONTENTS

### Vector Calculus

**Description:**
Line and surface integration of functions and vector fields. Integral theorems: Newton-Leibniz, Green, Gauss and Stokes.

**Related competencies:**
CE1. Capacity to solve mathematical problems that can appear in engineering. Aptitude to apply knowledge about: linear algebra; geometry; differential geometry; differential and integral calculus; differential equations and derived partial equations; numerical methods; numerical algorithm; statistics and optimisation.

**Full-or-part-time:** 65h
Theory classes: 13h
Practical classes: 13h
Self study: 39h

### Ordinary Differential Equations (ODEs)

**Description:**

**Related competencies:**
CE1. Capacity to solve mathematical problems that can appear in engineering. Aptitude to apply knowledge about: linear algebra; geometry; differential geometry; differential and integral calculus; differential equations and derived partial equations; numerical methods; numerical algorithm; statistics and optimisation.

**Full-or-part-time:** 60h
Theory classes: 12h
Practical classes: 12h
Self study: 36h

### Partial Differential Equations (PDEs)

**Description:**

**Related competencies:**
CE1. Capacity to solve mathematical problems that can appear in engineering. Aptitude to apply knowledge about: linear algebra; geometry; differential geometry; differential and integral calculus; differential equations and derived partial equations; numerical methods; numerical algorithm; statistics and optimisation.

**Full-or-part-time:** 25h
Theory classes: 5h
Practical classes: 5h
Self study: 15h

## GRADING SYSTEM

A partial exam (EP), a final exam (EF) and a practice exam (M). The final score is $0.35 \times EP + 0.55 \times EF + 0.1 \times M$. The reevaluation exam (R) is a single test and its score replaces the previous EP and EF scores, and hence the final score, in this case, becomes $0.9 \times R + 0.1 \times M$ (to be maximized with the final score previously obtained).
EXAMINATION RULES.

In the partial and final exams, only a sheet made by oneself can be used. For the practice exam, the allowed material will previously be announced. The use of a calculator, a primitive table or other tables, and (of course) mobile phones or similar devices is not allowed. Changes of group are not allowed.
