Course guide  
240132 - 240132 - Informatics

Unit in charge: Barcelona School of Industrial Engineering  
Teaching unit: 723 - CS - Department of Computer Science.  
Degree: BACHELOR’S DEGREE IN INDUSTRIAL TECHNOLOGY ENGINEERING (Syllabus 2010). (Compulsory subject).  
Academic year: 2022  
ECTS Credits: 4.5  
Languages: Catalan

LECTURER

Coordinating lecturer: Tost Pardell, Daniela  
Others: Dolors Ayala, Daniela Tost, Marc Vigo, Josep Vilaplana.

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Specific:
1. Basic knowledge on the use and programming of computers, operative systems, data bases and computer software with an engineering application.

TEACHING METHODOLOGY

The three hours a week of attended classes for the course are divided into one-hour lecture in large groups, and two hours of lab class in small groups. All classes will be face-to-face unless the pandemic situation prevents it.

LEARNING OBJECTIVES OF THE SUBJECT

1. This subject proposes an approach to computing in width. Assuming assumed the basics of programming, focuses on design issues and, using modules, introduces key issues using the computer programming language chosen as a binder.
2. Acquire the ability to analyze problems of some complexity, and applying techniques of structured analysis and design, performed with skill algorithms correct, legible, efficient and easy to maintain.
3. Knowing how to structure information and evaluate the various possible representations in a computer environment.
4. Being able to use abstract models for solving real problems.
5. Design of numerical applications.
6. Make a medium scale computer project.

STUDY LOAD

</tr>
</thead>
<tbody>
<tr>
<td>Hours large group</td>
<td>15,0</td>
<td>13.33</td>
</tr>
<tr>
<td>Hours medium group</td>
<td>30,0</td>
<td>26.67</td>
</tr>
<tr>
<td>Self study</td>
<td>67,5</td>
<td>60.00</td>
</tr>
</tbody>
</table>

Total learning time: 112.5 h
CONTENTS

**Topic 1. Object-oriented design**

*Description:*
Introduction and use of object-oriented design.

1. Inheritance, polymorphism.
2. Abstract data types.
3. Basic Design Patterns.

*Related competencies:*
CE3. Basic knowledge on the use and programming of computers, operative systems, data bases and computer software with an engineering application.

*Full-or-part-time: 26h 30m*
Theory classes: 4h
Laboratory classes: 8h
Self study: 14h 30m

**Topic 2. Recursivity**

*Description:*
Introduction and use of the recursive design.

Recursive design, completion and correctness.

*Related competencies:*
CE3. Basic knowledge on the use and programming of computers, operative systems, data bases and computer software with an engineering application.

*Full-or-part-time: 24h*
Theory classes: 3h
Laboratory classes: 6h
Self study: 15h

**Topic 3. Data Structures**

*Description:*
Introduction and use of some data structures.

1. We present some data structures and some application examples of them.
2. Data structures to be presented are stacks, lists, queues, trees or graphs.

*Related competencies:*
CE3. Basic knowledge on the use and programming of computers, operative systems, data bases and computer software with an engineering application.

*Full-or-part-time: 20h*
Theory classes: 3h
Laboratory classes: 6h
Self study: 11h
**Topic 4. Iterators**

**Description:**
Programming with iterators and iterables

* Generator functions
* Iterable classes
* Introduction to functional programming through iterators

**Related competencies:**
CE3. Basic knowledge on the use and programming of computers, operative systems, data bases and computer software with an engineering application.

**Full-or-part-time:** 20h
- Theory classes: 2h
- Laboratory classes: 4h
- Self study: 14h

---

**Topic 5. Utility Modules**

**Description:**
Introduction and utilization of some existing modules in Python.

- Data analysis (pandas)
- Mathematical computations (numpy)
- Interactive applications and games (pygame)
- Web applications (flask)

**Related competencies:**
CE3. Basic knowledge on the use and programming of computers, operative systems, data bases and computer software with an engineering application.

**Full-or-part-time:** 20h
- Theory classes: 3h
- Laboratory classes: 6h
- Self study: 11h

---

**GRADING SYSTEM**

There will be a scored exercise during a laboratory class (NL grade) at a date that will be announced at the beginning of the course. In addition, there will be a partial exam during the week reserved for this purpose in the middle of the semester (NP grade). The final exam will also be held (NE grade). The grade of the subject (NF) will be calculated from these grades:

\[ NF = 0.15 \times NL + 0.25 \times NP + 0.60 \times N \]

For the suspended student, the mark of the re-evaluation will replace NF.

---

**EXAMINATION RULES.**

The general rules of the School apply, including the prohibition of using any device (for example pen-drives or mobile phones) or application (for example e-mail or drives) that allows the exchange of information. The consultation of the python documentation and the libraries necessary for the resolution of the exam will be allowed.
